I recently purchased a new YAESU FT-1000MP. This radio is extremely sensitive to SWR and antenna impedance on the bands used...

In comparison, I can load my 40 meter dipole, center fed with a 1:1 balun on 40, 30, and 15 meters...NO PROBLEM.. with a Kenwood 440AT, and with an ICOM-706 with antenna tuner..

The YAESU goes nuts, and will not load but a small portion of 40 properly, (with the lowest SWR....) I took it into Yaesu for a check, and explained how fussy it was, and it checked out O.K., but I was told my antenna must have a less than 3:1 SWR.....(This does not seem to bother the Kenwood or Icom.....)

It was suggested that I might even try an antenna cut for the low end of 40 meters, and one for the high, or phone portion of the band.!!!

Ridiculous... The other rigs do it no problem.....Now if you are going to spend over $2700 for a radio, it seems it should work at least as well as a Kenwood or Icom!!

I later even received a letter from Yaesu stating that the rig worked with a 5:1 SWR......contradicting what I was first told.!!

Anyway, fair warning for those looking for a new rig, and do NOT have a 'perfect' antenna.......N1QQ

The Amateur is intelligent- he keeps his use of uh, um and
especially duh to a minimum.

The Amateur is trustworthy- except at club meetings, then
you best leave your ht at home.

The Amateur is strong- those kegs were heavy at Dayton

The Amateur is brave- who the hell would be stupid enough
to touch surface mount components ?

The Amateur is fashionable- at least while plaid was in a
comeback with the grunge look

The Amateur is stalwart- unless he finds someone he likes
better than you

The Amateur stays abreast of technological change- that's
why he's on the internet. It also accounts for the use of
AM today.

The Amateur is loyal- unless an upstart organization's
petition will get him more frequncies without a test.

The Amateur is single- pursuing any female relentlessly to
the point of a restraining order

The Amateur is crafty- he will search for the best
bargain, even if it costs 35 dollars in gas to avoid 25
dollars in tax.

I honestly do not know why I am replying to this....but here it goes....

Our founding fathers actually expected the government to probably get out of control, and wanted the people to have the rights to gain it back, "The right to bear Arms". The right to bear arms is "necessary to the security of a free state". The problem being you may find this to be a "free state", but many of us are finding it increasingly restrictive.

As a matter of note, most world dictatorships and monarchies start by relieving the public of there weapons so they may seize and maintain power and control. Its in the history books, and in the news.

I do not own a weapon, have no immediate desire to purchase one, but find that most anti gun ownership lobbies to lack a logical basis, usually spouting gun related deaths without mentioning that if a gun was not available a pick axe might have been used to the same affect.

Regards

Christopher Cox

Ok... Rail... Now this is really smart. Only rail transport?
Picture this:
A railroad line, running to every Winn-Dixie, Bi-Lo, Wal-Mart,
SAM's, shopping mall, ad nauseum.
Don't forget fueling the trains.
And of course, don't forget the total pain-in-the-ass of waiting
at a RailRoad crossing EVERYWHERE YOU GO, and the poor guy who
becomes a statistic thinking he can beat the train through the
crossing.
SURE, we could totally eliminate the trucking system and replace
it with rails...
REALLY bright.

A couple things are wrong here Burt, one, my 'purity' has absolutely nothing to do with your endless posts about hams & sex. Two, I'm not making ANY inferences, Im responding to something specific that YOU posted, not me, not the ham community, YOU.

> > By the way Burt, I never once mentioned sex, you did though, is there

A quick one liner which is usually the most we get from you, it still does not address why you brought up sex.

> Sex? I asked if the dweeb had a girlfriend. It is you who are guilty of what
> you accuse me of.

Ok, Burt, let's regress. Why exactly does a grown man with a wife and family of his own feel the need to question a 17 year old radio amateur whether or not he has a girlfriend? What does it have to do with radio, and why is it any of your business?In addition to calling him a pimple faced geek, I see your now calling him a dweeb, all this because he posted that he enjoyed ham radio and told you to beat it.

> > Ok, then I'll rephrase, perhaps you wouldn't be married for the second time,

Well not quite Burt, your the one who continuously makes comments about hams/sex and now recently your pre-occupation with this 17 year old boy wanting to know if he has a girlfriend or not. My interest lies in you Burt and the comments you make, my question again, plain and simple is. Why are you concerned with a 17 year old boy and whether or not he has a girlfriend?

You remind me somewhat of Drew, and Masa, quick one liners, a spin here and there, a rebuttal that means absolutely nothing, but never a real answer to the question.Questions like why a grown man is pre-occupied with hams and sex, and 17 year old boys and whether they have girlfriends.

>Most people know nothing of ham radio. Ask someone in their 20s
>about ham radio. Most won't know what your talking about.

That's always been true for any technical hobby. Back in the 60s I'd mention ham radio and the listener usually knew nothing about the field. Take the opportunity to provide a careful explanation when you encounter such a person.

In your case Duwayne, we apparently have someone on the outside looking in - someone who doesn't seem to be licensed but who has just begun hanging out on the NG, firing plenty of flames but adding nothing constructive. Let me know if you'd like a license manual - I'll be glad to send you one.

Hi all!
I'm working on a project that requires a very small 2m FM receiver. The smallest I have seen so far are in commercial WALKMAN\radio units, but I really need it smaller. If possible I'd like to get it down to about 1 x 1 inches. Multiple boards can be stacked on top of each other but I'd rather it not be any larger than 1 inch thick. I'm trying to make a pager that goes off when it receives a DTMF tone (or series) and sets off a beeper and/or a flashing LED. The pager unit itself consists of a PCB about 1 x 1 that uses a 567 tone decoder and a 555 timer. The real problem is the receiver. I don't know if it can be built small enough. Does anyone have any ideas or know how I could modify the receiver of an old motorola commercial pager to work? Thanks for your help! Please post responses to rec.radio.amateur.homebrew or mail them to aporr@coil.com.
Thanks a million!

2615. Re: The truth about gun owners

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-18 00:00:00 UTC
From: ycthulhu@aol.com
Message-ID: <1998051800541700.UAA24217@ladder03.news.aol.com>
Source record: 172025

The 2nd amendment to the Constitution of the United States
says that the right to keep and bear arms SHALL NOT be
infringed ... that is, restricted, in ANY way.

Numerous writings by our founding fathers state that
the prime reason for this right of citizens to own
guns is NOT to promote hunting or sport shooting,
NOT just for self-defense against criminals, but,
and most importantly, for defense against
GOVERNMENT TYRANNY.

Any of you TV-fed morons out there who think
that the government is just trying to "save the
children" by attempting to confiscate guns
from citizens and making gun ownership illegal,
are indeed gullible, easily persuaded, and will
make excellent, obedient slaves when the time comes.
And the time IS coming when "our" so-called
government will actually attempt a nationwide gun
confiscation. Note, I said "attempt".

In the light of the clear, unambiguous intent of
the Constitution and our Founding Fathers, this
gun control debate clearly shows just WHO are
the patriots, and WHO are the traitors to America.

2616. Ham antennas in Massachusetts

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-18 00:00:00 UTC
From: j2aguiar@umassd.edu
Message-ID: <355f8886.0@gatekeeper.umassd.edu>
Source record: 172026

I'm posting this for my younger brother who is been an active Ham for last
45 or so years. For the past several years he has moved about quite a bit
and made do with various "temporary" antennas, long wires, dipoles.inverted
vees, etc. The last time that he had a real performer was in the seventies
when he put up a guyed three section crank up topped by a three element
three band cubical quad. Now that he has settled down to what he feels will
be his final home he decided to once again put up a good performer although
not a quad 'cause he remembers the grief caused by icing.
He ordered a three section free standing antenna from Tri Ex. He then hired
a professional concrete company to dig for and pour the base using the in-
sructions supplied by the manufacturer concerning size, concrete mix, rebar
deminsions, etc. He then put
all the components together and mounted a three element monobander by Hy-
Gain and raised the works after a little tuning. He was very satisfied with
the results, but he made a grave but understandable error. He forgot that
this was the ninties and having a lot of old time buddies who had in the past
erected all kinds of towers both commercially built and home brew with get-
ting a building permit. The last line should read without bothering with a
building permit. He happily used the tower-antenna rig for several months
before being advised by the head honcho at the Dartmouth Building Dept.
that his rig was illegal. The big problem is that Superintentant of the Dept.
has no idea as to what constitutes a properly installed system. In the mean
time my brother has hired a structural engineer, who asked Tri Ex for guid-
ance, he has also talked to the ARRL and to a Ham-Attorney out of Boston.
All to no avail. He was advised by said attorney not to get involved with
the state politicans as they would more than likely make matters worse.

I'm Wondering if anyone, especially fellow Massachusetts residents, have run
into such a snag recently and how they handled it. Thanks in advance.

>>
>How does one get the user profile? Where is it located?
>
>

Not sure if you can do it from outside an aol connection. From the aol menu select MEMBERS and then GET MEMBER PROFILE.

The profile is user-generated. The member, aol's feel-good term for user, can write whatever he or she wants in the profile. So, there is no reason to believe the profile accurately depicts the member anyway, unless some if it is verifiable through other means such as a callsign database or phone book. The member can have up to five screen names, with a profile for each. sometimes a he is a she, or vice versa. A member can have a conservative and a liberal persona, a straight-laced and a party-animal identity... I think you get the picture.

A lack of a profile just means the member doesn't want to bother with it. The profile is abused by junkmailers, stalkers, scammers, and other undesirables. The member directory search engine can be used to search the entire member directory for key words in the profile and develop a list of targets for IMing, etc. Leaving it blank, at least for the primary screen name, is actually a good idea. A "custom" profile is usually created for one or more screen names to use for chat or IRC purposes, and this screen name is not used for e-mail or usenet.

If Drew doesn't use a profile for one or more of his screen names, he may have good reason.

No, a gun would be necessary because mace is not always effective. The
effectiveness of mace varys between individuals. The same can be said about
martial arts. Hence the term: "the equalizer"

>
>I must admit after watching a LOT of USA

nicer
>to each other and not so ignorant of each other then there would be far
less
>need for ANY weapons ?.
>
>Just my two penny's worth...hope ya'll sort it out between ya ! :-)
>

Training is a good idea and certainly keeping guns away from those who are insane, incompetant or mentally ill is reasonable. However, there is no way that you can mandate or influence people to be "nicer" to each other. Certainly this is a difficult problem in a country such as the US which has a diverse culture with many opposing factions, races and groups.

Hi Tim,

Being from Louisiana you get used to the heat, but it was hot on Friday. Sat and Sun cooled nicely with the breeze.

Enjoyed a lot of time outside. Spent the most money at Far Circuits, got two of the JVFax APT decoders, and the board for the TTL-RS232 for my 850S. Walked around inside a lot, hot like you said. Just seemed that everything I wanted inside wasnt for sale. Debated on the WinRadio, the PCR1000, or the AOR 8200. Well, the Winradio 1500 wasnt for sale yet, not type accepted, the PCR1000 @ $430 sold out and was way more expensive everywhere else, and the 8200 wasnt for sale yet.

Breezed by the Yaesu boothes plenty of times. Debated on the 847, thats an AWESOME rig, but would cost too much for the overhead to buy the rest of the

stuff (if you're gonna go, go all out) like two more antennas, rotators, preamps, etc. Then spotted the FT100, another awesome rig. Almost a 847 in compact size, but yet again, not type accepted yet, and not for sale.

So my trip came down to a cell phone case talked down from $6 to $5, an AWE64 OEM card for $60, and some assorted Far Circuits. Overall enjoyed the heck outta it and am already eagerly awaiting next year. Either that, or Germany or Tokyo. Hummmmmmm..

Also noticed that the crowds were WAY down this year. They reported +30k again, but it sure seemed less.

Charles

Hello !
I have been using an IC-725 since I started as an ham in 1992.
When I bought it I barely nem ICOM, but that was the best radio
I could buy (new) for the price it had.
I wanted to buy a kenwood ts-140s, but a few months after I was
glad I got the icom ! The receiving is excellent and the band
changing is very quick, all very easy to use.
The IC-725 is very "basic", without all those "bells and whistles"
but it is like a small radio that wants to be a top line radio.
My radio has a lot of hours of use and never gave me any problem
(and I hope it will never give!). As a DXer and Contester I have
explored all that it can do.
I think is a nice buy.

Most people know nothing of ham radio. Ask someone in their 20s about
ham radio. Most won't know what you are talking about.

If you want to talk about ham radio, you might want to try one of the
moderated LISTS. The QRM level is much better than the newsgroups.
Most of the ham radio newsgroups (especially this one) have been
soiled.

>
> I never had sex with anyone I was not married to.
> Can you say that.

No not quite Burt, while living in Los Angeles I took advantage of the
international flavor.While traveling abroad I had several girlfriends that I was
not married to, so no, I definitely can not say that.
By the way Burt, I never once mentioned sex, you did though, is there something
else here we should talk about?

Trent Drenon wrote in message <01bd6bef$5bdb5ae0$226262ce@tdrenon.telis>...
>
>You must be really bored Burt. If you don't like our hobby find another
>one that you do like. Trent(a 16 year old ham)

Burt replies:
In many cases "a 16 year old ham" means the same thing as pimple faced
geek.In many cases boys who are into ham radio are not part of the
mainstream of teens IN ANY way, no girlfriends, no nothing.
Thus it is you who must be bored.

Again Burt, you seem to be pre-occupied with the sex lives of 16 year old boys
who hold amateur licenses.
Do you think this is natural for a grown man, married with children of his own
to profess as you have done above?
Why would you care? Please tell us.

> If so then we can talk about your accusation.

What accusation? I asked a question, I didn't accuse you of anything. The key
here Mr. Teacher was thequestion mark at the end of the sentence.

> If not you live in a glASS house.

No, it's a nice 4 bedroom ranch in Rochester Hills, MI, about 250ft agl, great
VHF site.

> Perhaps if you spent more time taking care of your first wife, you wouldn't
> have had to look for another.
>
> I did not HAVE to look for another.

Ok, then I'll rephrase, perhaps you wouldn't be married for the second time, how's that?
Did she get tired of your comments about young boys with amateur licenses and the whether or not they have girlfriends or are a part of 'mainstream of teens'.
Yep I suppose my wife would leave me too.

Should we also tell him packet BBS suck almost as bad as TCPIP over radio?
Maybe he'll replace that service with the internet too.....

To the person needing help.... I wish I could help you, but I don't know
anything about your area. Have you talked to a local guru to see if your packet
system is properly configured? It may be that if some routing variables are
incorrectly set, you may be tranmitting what looks to be good and right IP
packets, but they may not look to be so to the switch you are getting into.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <651>

.....
>From the Editor's Desk:

Several of our subscribers have written comments to us regarding the NPRM RM 9267, concerning a reallocation of the 70 cm amateur radio band. While we don't as a matter of course advocate a position on pending legislation, we do feel that this is an important issue and you should be aware of it. A good discussion on the impact of RM 9267 on the amateur radio communiy can be found on the ARRL Home Page at http://www.arrl.org

Stay safe, everybody. See you next week! Dave Larton, Editor

>From the mailbag:

FEMA APPROVES $40 MILLION TO HELP LOS ANGELES
MAINTAIN ELECTRIC POWER AFTER A MAJOR EARTHQUAKE

WASHINGTON May 15, 1998 -The Federal Emergency Management Agency (FEMA) has approved a $40.5 million grant that will help the City of Los Angeles avoid a citywide power failure like the one that crippled the community following the January 1994 Northridge earthquake, Vice President Al Gore announced today.

"President Clinton and I are committed to minimizing the impact that disasters have on the lives of Americans," Vice President Gore said. "In the event of disaster, these funds will help Los Angeles residents focus on rebuilding their lives rather than having to endure the hardship and sacrifice of being without power for days."

The hazard mitigation grant to the Los Angeles Department of Water and Power provides funds for seismic retrofitting of receiving, switching and generating stations throughout the Los Angeles basin. When completed, this major mitigation project will ensure against a citywide power failure.

The FEMA funds are part of the Hazard Mitigation Grant Program which is designed to help break the cycle of damage, repair and repeated damage that has characterized past disasters. The Department of Water and Power will use the grant to implement mitigation measures throughout the Los Angeles basin to retrofit key power transfer stations and strengthen facilities which serve essential lifeline services to the area.

The mitigation grant program assists local governments with 75 percent of the cost of retrofitting structures to withstand or minimize the impact of future earthquakes. The state or local entity must provide the remaining 25 percent match. The current project totals $54,064,044 with FEMA providing $40,548,033.

The January 1994 Northridge earthquake caused damages projected to be in excess of $30 billion. To date, FEMA assistance to individuals, state and local governments, and other eligible entities has been approximately $6 billion.

Current Events:

To: ACS Participants and OES Staff:
From: Chief ACS Officer-Interim ACS/EAS program manager

On behalf of OES, we look forward to your presence and help
at the ACS UNIT MEETING
Thursday 5/21 at 6:55 PM in the OES EOC, 2800 Meadowview Rd
Sacramento.

Items on the agenda:
Reports from Agencies, Regions and Assignments
Hands-on RIMS training
DSW registration
New HQ OES facility at Mather
HQ training in progress
New HQ CommCenter equipment
New ALE test assignment from Warning Center
Satellite Weekend (field day for OASIS trailers!)
Fingerprints and and probation for new registrants

Memorial plaque to honor Stan

Please advise those in your unit of thie meeting and
bring as many as possible. The table top phone system
will be in operation at 916-657-4104 for those out of
town who cannot make the trip.
....

WATSONVILLE ANTIQUE FLY-IN AND AIRSHOW - May 20,21,22,23, & 24

Jim Piper KD6YKL still needs more communicators for the airshow!
Volunteers in the emergency services Unit have the best seat in the house,
along with the ability to meet experts in the field of aviation, receive free
souvenirs, and are offered free admission and parking!

Here's a word from Jim Piper KD6YKJ:

The airshow has turned into one of the best possible ARES training
exercises we have each year. It has all the necessary elements:

-- passing "real" traffic
-- passing traffic under sometimes stressful conditions
-- high ambient noise environment
-- strictly controlled traffic nets
-- sometimes arduous conditions
-- the potential to turn from 'training' into REAL (i.e., worst case,
the possibility of a mass casualty incident.

The primary ARES contact for this is Bob Wiser / KD6FXQ, Watsonville
EC. Please advise both of us of the e-mail addresses (if any) plus names,
and telephone numbers of the volunteers from your area. Bob can be
reached at:

bwiser@gregory.com
BobWiser@aol.com

His telephone number is: 728-4198

FYI: there will be a field familiarization on May 9 at 0900 at the
Watsonville Airport (talk-in on 147.945-/94.8).

73 --
Jim / KD6YKL

....
What's New on the Web:

Bolingbrook ESDA Web Site
http://homepage.interaccess.com/~ehilborn/esda/index.shtml

Bolingbrook ESDA, (ESDA stands for Emergency Services Disaster Agency)
is a municipal agency comprised of volunteers who are on call seven days
a week / 24 hours a day to provide additional manpower and resources for
public safety. They assist the Fire and Police departments within the
village of Bolingbrook, Illinois and surrounding communities under a mutual

aid agreement. In some ways an ESDA or EMA (Emergency Management Agency) group is similiar to / or a newer version of Civil Defense groups.

They are responsible for lighting, fire victim care, firefighter rehab, flood pumping, and traffic control at fire scenes. Their fire victim care/firefighter rehab program is an innovative effort that is carried out in two converted ambulances. The program is being used as a model by other communities. The rehab units serve as a shelter on the scene and source for clothes, baby formula, Gatorade, coffee, etc.
Contact and coordination is maintained with the Red Cross to provide short-term shelter at local motels.

They are also a resource to the Police department to assist with traffic/crowd control, search & rescue operations, and occassional patrol.

BESDA is also the primary certified weather-spotters in Bolingbrook and work in coordination with Multi-County SkyWarn based at DuPage County's Office of Emergency Management. In the event of a disaster, they would also be responsible for the Emergency Operations Center, coordinating agency efforts, and obtaining resources (including state and federal). Public education is also an important aspect of disaster services.

Don't forget to send them email at: ehilborn@interaccess.com

Have a Volunteer site you'd like to see Showcased? Email larton@garlic.com

This week's EMCOMM Bulletin:

EMC132 It's Our Job!
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC132 It's Our Job!! For release 5/18/98

The following describes one units activities. It is likely duplicated many times elsewhere, but articles of other unit activities remains a popular request from readers. This one is from from the Solano County CA RACES publication "SCRAP" for December, 1995.

"As volunteers in ACS (Auxiliary Communications Service) we have offered our services to the County in time of need. These services are not limited to the operation of our own radio at home but include all means of communication and related support duties. Answer telephone? Why not, it is a communication device. Translate a letter or conversation? Why not, speech is one of the basic forms of communication. How about FAX or computers? Even delivering mail or notes are a form of communication.

Think about it! All of these forms of communication do not require an (FCC) Amateur Radio Service license, but none the

less are important avenues of communication.

For these reasons, ACS was adopted, not to replace paid county
or city workers, but to help in times of emergencies.

RACES (Radio Amateur Civil Emergency Service) is a part of ACS.
This unit does require possession of an Amateur Radio License
because of FCC regulations. However, RACES being part of ACS,
does not exempt volunteers from being asked to perform other
tasks in the communications field, especially if we have the
"skill" to do the job.

Our Resource Manager is currently creating a data base to
maintain a list of volunteers with various skills. When
completed the data base can be accessed to locate a particular
skill and those volunteers that have that skill." (end quote)

The publication also described a Mobile Command Post of the
Solano County Sheriff's Department; and ACS implementation to
staff the RACES equipment for public "show and tell" events.

Then, note their perspective of A.P.R.S: "Why use APRS? Well
it gives a visual picture of where the incident is located.
We use A.P.R.S to inform the RACES....as to what is
happening.... Rather than send long messages or telephone calls
(that may not really be necessary) as to where, when, what, a
simple graphic display with a one-line text is all that is
needed. That alerts interested parties who can then ask for
follow up information. The article closed with this comment:
"Travis AFB has a more elaborate system with a data base, etc.
Lots of bells and whistles attached to the USAF program, but
APRS is more simple and easier to use under the pressure of an
emergency. And it is a heck of a lot cheaper!" (End quote)

I would venture to guess that neither of the victims were armed.

This just goes to show that motels should be outlawed. This was one death that would have been avoided if we confiscated all hotel rooms. Who knows how many more people would have been saved if this had been done long ago.

2651. Call tags

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-18 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6jq8p9$a7a$1@nnrp1.dejanews.com>
Source record: 172061

Why do many hams wear call tags ?

1.It scares away females.
2.If a female does approach its the last defence against having to speak and then be recognized later.Simply adjust your belt shack.
3.If you do speak you can still act like a ham with impunity (unless she is a ham in which case she can look you up)
4.Its helpful when you are operating your belt shack on 2,222,440,1.2.
5.Flip them over- next stop 8 hours at the register in K Mart
6.Most hams prefer their callsigns to their names after being licensed, sort of like Madonna
7.If a ham is not wearing a call tag, other hams may safely assume this is a bad apple and is not going with the program. It is safe to ignore said ham, which the hams would rather do anyway
8.It was the cheapest thing they could find at the last hamfest.
9.In a room dominated by plaid, you can be sure your xyl will take home the right one.
10. On that note, the ultimate ham practical joke.

here's what people say about burt where ever he goes-

--*I don't even see why we bother with this guy- He's a legond in his own mind*

--*Mr Fisher is neither; he is a truly disturbed person who is deriving some comfort from his attempts to torment this and other newsgroups.

I, for one, pay him no mind; he has offered nothing constructive to this forum. I believe that he says what he says only to demean others. I can't begin to fathom why.*

--*Any decent Usenet browser program will have filter mechanisms that allow automatic exclusion of all traffic from specific email addresses, involving specific subjects, etc. The way to pay Mr. Fisher no mind and leave
him howling at the moon is to make use of filters. If you don't have automatic
means, just resist the temptation to post a response to his messages as THIS
IS WHAT KEEPS HIM GOING.*

--*Burt is one of those guys, in my humble opinion, who enjoys causing problems. He is not the first, and he will not be the last. Aside from some humorous references to the man, I see no reason to pay him any mind. Guys like Burt usually never hurt anyone. All the tought guys I know just do what they're going to do, and you never hear or see them coming. So all we really have here is a sick, ignorant fool who needs attention. It is OUR CHOICE to give him what he craves, or starve him out of the kitchen, wot?

I will confess that I have "bit the burt bullet" myself, but enough is enough. I find it humorous to bait him right back, but I have come to realize that he is not kidding; he really is as big a dolt as he appears !*

--*Dunno, I don't take him serious. This is a newsgroup, and like each good newspaper has to have a comix section, this newsgroup has to have a Burt. In filling kind of a cartoon function, Burt does great.*

--* I hate to imagine that an educated human being
could say things that stupid and not be kidding or just trolling!*

--*Publishing people's phone numbers, threatening violence, hating people because of where they were born, all Nazi characteristics Burt.*

--*Lately, it seems that just about *every* newsgroup I read has at least
one "village idiot" in it. If no-one responds to these guys, they
usually tend to take their ball and bat and go home (or monkey
around
in some other newsgroup for a while. . ..)*

--*The Burt Fishers in life never die, they just get reborn under a
differnt name. They are everywhere you go, at work, at play.*

here's one of my particular favorites were burt shows he knows how to use
the phonebook-->

--*>> burt would probably dry up and blow away like dogshit in the wind if
>> he didn't get the attention he gets.--
>
>And you gave me more attention.
>Would you say the above face to face? 56 year old?
<deleted personal info of sender that burt posted here>

Perhaps 56 years old but pretty far away gutless Burt. Why do you
publish his phone number? So we can congratulate him for his astute
observation of the similarity between you and used Purina? Congrats Bob
I think you tweaked the Burtster. Sorry Burt no mach points for this
one.*

--*Would you beleive parents trust their children alone with him?*

--* don't waste your time talking with Burt. he's not here to help you or
anyone else. His life stinks, he hurts and he just wants to inflict as
much pain as possible on others in the misbegotten idea that it will
make him feel better. <---to which burt replies how his life is like a
wonderful happy dream.*

this kinda made me laugh. in the last post, burt discusses how wonderful
his life is <Do not judge me based on YOUR life. My life is just fine, my
WIFE is cooking supper, my straight
A teen is studying and everything is better than I thought.>
...but the next post is taken from the SINGLES newgroup. just happy burt
living vicariously.
btw this was said to burt, not burt speaking.

--*ah, but a person who *acts* like a pig is a pig in *every* way!
so don't worry, you win.....you're the biggest pig.*

well i think you get the point...

> Good question, Tim. Another good question is "why do you insist on mentioning
> Drew and Masa in posts that do not involve them?" Maybe you have a little
> fetish of your own, eh?

Well Drew, no one has mentioned fetishes until your post, I mentioned you and Masa in my reply to Burt because I was comparing him to other trolls, you and Masa are classic trolls and I thought it appropriate to mention to cream of the crop if I was going to compare Burt to other trolls. Get it now? See the connection troll?

Now explain to me how you can read my post which says "it's right in line with the typical troll like Drew or Masa, lot's of lip
service and no real answers" and somehow come up with a thought about a fetish. Please tell me how you came up with this, I'd love to know how your mind is working.

But who's fault is this, if it's true? How are they suppose to know about it if we aren't telling them about it? If it's not in the newspapers or on television, maybe it's because hams aren't conveying the potential and excitement of amateur radio to the people who decide what gets into the news. Time after time, hams lament that "amateur radio isn't exciting to young people today because it has to compete with cell phones and computers etc". Then don't compare it to those things, but emphasize what is unique to amateur radio.

How often do hams who complain that amateur radio is not known beyond ham circles actually go out into the world beyond to tell people about it? I'm on an email list from one of the local clubs, and I get the notices of code practice classes and hamfests etc, but they aren't posting those messages to the local newsgroup, where people who have heard of ham radio will be able to make contact, or where people who've never heard of it will wonder what that amateur radio stuff is. There's a hamfest coming up in a few weeks here, and I've put up posters for it in places that have absolutely nothing to do with electronics or amateur radio. That's where you reach new people, not by simply putting up the posters in the radio stores. The newspapers here have weekly listings of upcoming events by "community groups", I'm sure this happens in other places too, but an auction a few weeks ago was the first time that I can recall that an amateur radio related listing was put there. But if you do that sort of thing, you may get new people bringing in things to sell (good for people wanting to buy stuff), bring in new people to buy things (good for people who are selling things) and give new people a chance to learn about amateur radio (which is good for the hobby).

If you announce a licences class out in the world beyond amateur radio, it helps those who know about the hobby but have no idea who to contact locally or where to get started. I remember when I was young and new to the hobby, and I knew about the ARRL long before I knew about a local club or even much about amateur radio in Canada. Indeed, when the rule was changed so you didn't have to be at last fifteen to get a license, it was the ARRL I contacted to find out about local clubs in the area. I just had no other place to look. And I don't really think that has changed in the 26 years since.

But there is another step that has to be dealt with, that of getting the idea of amateur radio out to the public. If amateur radio isn't out there, then peole will scratch their heads and wonder what a "hamfest" is or what a licensing class is or even "what in the world is amateur radio" when those announcements do get out into the public eye. One of the local clubs operates field day from a downtown location, or at least has done so in the past. They just move some tables and equipment out to the sidewalk, and bring longer lengths of coax down from the existing antennas on the roof. While it's not as fun as going out in the country to operate, it has the great advantage that it reaches anyone who passes by. They don't have to go out of their way to see what's going on, they don't even have to have an interest before coming into contact with amateur radio. With computer equipment becoming common at hamfests, there is a similar potential because people will come for something they ae familar with, and brush up against amateur radio. The point being that you can't tell people about amateur radio, tell them about the licensing class, and then expect them to get a license all in one breath. It has to come in stages, and the first contact has to be in familiar settings.

And another thing that's imortant is what is conveyed to the public. Sadly, we try to put amateur radio in the best light, because we are trying to sell something, so repaters and phone patches get hyped, and as I've already mentioned, they can't compete with modern technology. There is lots to amateur radio that is unique, and that is what needs to be talked about. But at the same time as the repeaters are being talked about, there is a tendency to forget that the people being talked to don't know anything about amateur radio, so the message gets garbled or people start talking about insider things that mean nothing to someone who knows nothig about amateur radio. I doubt there's a ham alive who doesn't know what a hamfest is, but would I know it's meaning if I knew nothing about the hobby? That's an important key to conveying the hobby to those beyond it, to think in terms of people who don't know rather than from the standpoint of someone who's had a license for years and years. Hardly any of my life existed before I knew about ham radio, and it's been 26 years since I was licensed, so I find it extremely difficutl to think in terms of knowing nothing about amateur radio. But since I understand the mechanism, I just automatically figure that if you are posting an announcement to a local newsgroup for an upcoming hamfest, for example, you have to say something about what a hamfest is, and something about amateur radio (or at least provide a link to a page that does describe it).

> Burt

A cute spin Burt, unfortunatly for you, I'm not the one who continuously makes posts regarding hams and sex.Anyone on the newsgroup knows this so your pityful attempt at creating a new header isn't going to do much for you.

It's sort of a cute way to try and focus the attention somwhere else. Unfortunatly for you, the facts remain.

As I expected your not man enough to answer the question, but thats no surprize it's right in line with the typical troll like Drew or Masa, lot's of lip service and no real answers. Of course the question is Why is Burt Fisher, a grown man with a family of his own concerned in ANY WAY about the sex lives of radio amatures and furthermore why is he concerned whether or not a 17 yr old fits the 'mainstream' teen lifestyle and whether or not he has a girlfriend? Do you have an answer Burt or should we expect another wimpy spin or one liner reply to the question?

Recently, tornadoes caused widespread damage in
southern Minnesota. The towns of Comfrey and St.
Peter, among others were heavily damaged. Comfrey was
hit so hard that there is talk of not rebuilding the
town. Guess who provided the emergency communications?
Hams on two meters. Why? The cell phones were out of
order. Why? The towers came down.
Your letter reeks of irresponsibility and utter
garbage.
Gary

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

Well, I recently got a wake up call. Tuesday night I was arrested in Newington CT outside of the ARRL headquarters. Apparently, I was almost naked and assaulted David Sumner as he left work for the day. I say apparently because I was very, very drunk and remember nothing but throwing my clothes out the window on I-95. In addition to assault and indecent exposure, I face DUI charges and illegal possession of a firearm. God only knows what I intended to do, but there was a pawnshop receipt from a Boston area pawnshop, and a box of rifle shells. I want to thank all you guys for not letting me get by with my trolling and relentless ham bashing. I realize now that I have led a frustrating, boring life, and with the help of the treatment program my schools EAP has sent me to, I hope to pick up the pieces of my life someday. It all went wrong after high school, when I was no longer president of the ham radio club at South Dennis High, and couldn't really cut it in college. Ham radio was my life, I had no balance, so eventually, when I realized how empty my life had become, I lashed out. I am truly sorry if I have caused anyone here any pain or anger.

Burt

The Soviet Union established gun control in 1929. From 1929
to 1953, 20 million political dissidents, unable to defend
themselves, were rounded up and exterminated.

Turkey established gun control in 1911. From 1915 to 1917,
1.5 million Armenians, unable to defend themselves, were
rounded up and exterminated.

Germany established gun control in 1938. From 1939 to 1945,
13 million Jews, Gypsies, homosexuals, mentally ill people,
and other "mongrelized peoples," unable to defend
themselves, were rounded up and exterminated.

China established gun control in 1935. From 1948 to 1952, 20
million political dissidents, unable to defend themselves,
were rounded up and exterminated.

Guatemala established gun control in 1964. From 1964 to
1981, 100,000 Mayan Indians, unable to defend themselves,
were rounded up and exterminated.

Uganda established gun control in 1970. From 1971 to 1979,
300,000 Christians, unable to defend themselves, were
rounded up and exterminated.

Cambodia established gun control in 1956. From 1975 to 1977,
1 million "educated people," unable to defend themselves,
were rounded up and exterminated.

With Burt becoming an increasing annoyance on our bands, Why Communicate (YCOM) has unveiled its new HF/VHF all mode rig with aBDSP. The YCOM 15083856962 features automatic Burt notch for CW and SSB, and a anti-Burt noise blanker for HF. On 2 meters the rig offers up a Burtrodyne-proof receiver with third order Communist filters to prevent front-end overload.

The anti-Burt DSP offers both high and low Burt cut offs, to be used depending on how whiny he is at any moment. Automatic CW and SSB zero beat are included to allow users with appropriate optional filters to eliminate offending signals completely.

Optional accessories: a large detachable heat sink also useful for throwing at ham flea markets and auctions, a mobile whip antenna without saftey tip also useful for poking eyes out, and mousetrap/cw paddles/hand buzzer for "guest operators."

~~~W4ABC Writes...

Read those words and choke Burt. Knowing that you come from an overprotective (overbearing) anti-gun state like Massachusetts, I have no doubts who does the thinking for you Burt. I was born there, and I'm not looking back.

My brother still lives there, and he tells me that there is a proviso that states that if an intruder enters your place of dwelling, that you must first attempt to flee. Talk about "BULLSHIT." Here in Florida, you are already eating the wrong end of Mr. Mossberg's M590A1. It is not there to kill, but to "STOP" the unlawfull individual's entry into my home. Sometimes they don't live to draw their own gun though Burt!

Since we are talking about the rights of the "Individual," "Groups," "People," let's talk about one well known individual in history, that disarmed his country so that all would be safe from the ravages of the "gun." His name was non other than "Adolf Hitler."

Burt if you are serious about being "taken seriously," then may I suggest a couple of books that you may wish to peruse.

"More Guns - Less Crime" by John R. Lott Jr. The University of Chicago Press

"The Second Amendment Primer" by Les Adams Palladium Press

Let me tell you the story about this caveman that beat his wife on the head with a gun...

>Most people know nothing of ham radio. Ask someone in their 20s
>>about ham radio. Most won't know what your talking about.

Not really true. I'm 14, and got my ticket when I was 13. Once I brought my 2 meter HT to school (it was like a "Fun Day" things at school), and alot of people actually came up to me and started asking me questions about the radio. Most of them actually knew about ham radio, or at least knew what it was about. (Alot of them told me they think it's like a long range CB, but coming from 7th graders, that was a damn good answer!). You'd be suprised how many people actually know what ham radio is about.

Source record: 171932

Hey there...

I have for sale or trade a pair of Motorola Spirit VHF Monitor Revievers. They are dedicated frequency recievers, which are currently set to 138.325 MHz, but can be set to anywhere 138-174 MHz range (these are not some garbage analog recievers, they are PLL type with no frequency drift). Physicly they look like pagers, but have a speaker, volume control, etc, and are very small in size. Excellent for monitoring a specific frequency, such as a 2 meter repeater. Both come with rechargeable NiCAD batteries, plus a charger for the batteries. Will take best offer or trade for other radio equipment or antennas (would you have something like a 2 meter Mag Mount antenna?) E-mail me, we'll work something out.

Orange County Disaster Response Group Needs Volunteers

The IMPACT DIsaster Response Unit based out of Orange County, California is looking for volunteers to help staff its unique and one-of-a-kind Disaster Response/Disaster Communications Unit. The IMPACT Unit is a mutual aid/mutual support groups that works with all public service agencies, cities, and other organizations like the American Red Cross, REACT Teams, RACES groups, ARES groups, and many more.

No training or equipment is required. Just the need to want to help those who live around us.

We have training classes set-up in first-aid/CPR, basic search & rescue, disaster preparedness, communications at a disaster scene, amateur radio workshops, advanced first-aid/EMT First Responder, and many more.

The IMPACT Disaster Response Unit utilizes all radio bands including: Amateur, GMRS, CB, FRS, Cellular, Business/Commercial Bands and many more.

For more information, please send e-mail to sct_impact@bigfoot.com

Check out our web page!

Hello,

well I was just doin a hardware mod for IC-T7E (actually the mod was ment
for IC-T7A, but I dont see any difference heh)...and thanks to the guy >>
BigDave << I was able to make the mod...well the RX MOD for icom ic-t7a/t7e
are in anddress

http://www.eecs.wsu.edu/~ritz/IC-T7A_MOD.html

And they work great...I can send at freq. 50 to 600Mhz (before the mod only
144-146Mhz and 430-440Mhz).

regards
Mart

2687. FD rules changes

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: Mark Atherton <atherton@bigfoot.com>
Message-ID: <3561CBB3.6CDF@bigfoot.com>

Field Day rules have changed this year, eliminating the bonus points for packet and VHF/UHF. As I understand it, not only are the bonus points gone but now they are considered to be addtional transmitters, and digipeaters/nodes cannot be used for contacts. Digital modes are now considered a separate band.

Does anyone know *why* the ARRL decided to make these changes? I'm wondering if it's worth it to bother bringing the equipment out this year.

Mark N0RXD

Well, I recently got a wake up call. Tuesday night I was arrested in Newington CT outside of the ARRL headquarters. Apparently, I was almost naked and assaulted David Sumner as he left work for the day. I say apparently because I was very, very drunk and remember nothing but throwing my clothes out the window on I-95. In addition to assault and indecent exposure, I face DUI charges and illegal possession of a firearm. God only knows what I intended to do, but there was a pawnshop receipt from a Boston area pawnshop, and a box of rifle shells. I want to thank all you guys for not letting me get by with my trolling and relentless ham bashing. I realize now that I have led a frustrating, boring life, and with the help of the treatment program my school's EAP has sent me to, I hope to pick up the pieces of my life someday. It all went wrong after high school, when I was no longer president of the ham radio club at South Dennis High, and couldn't really cut it in college. Ham radio was my life, I had no balance, so eventually, when I realized how empty my life had become, I lashed out. I am truly sorry if I have caused anyone here any pain or anger.

Burt

I'm guessing they don't want to overload the packet networks. Heck
they're overloaded with just day to day traffic. Contest traffic
might be too much...

To all radio amateurs

SB QST ARL ARLB035
ARLB035 WB8BGY appointed Great Lakes Vice Director

ARRL President Rod Stafford, W6ROD, has appointed George Race,
WB8BGY, of Albion, Michigan, as Vice Director of the Great Lakes
Division. The appointment became effective May 19.

Race, the Great Lakes Division director from 1995 until 1998, lost
an re-election bid last November to Joe Falcone, N8TI, a Livonia,
Michigan, attorney. When Falcone resigned last March, Vice Director
Dave Coons, WT8W, moved into the director's slot. The vice
director's position has been vacant since then.

Race, 62, previously served as Great Lakes vice director from 1990
to 1995. He became the Great Lakes director in June 1995, when he
took over for the ailing Allan Severson, AB8P, now a silent key.
Race was elected Great Lakes director in 1996.

Members may contact Race via e-mail to wb8bgy@arrl.org.

Hi,

I'm not a radio operator, but I need information ASAP on the basics of how a transceiver works--what the different elements are (filters, oscillators, etc.) and what their function is.

Is there any good overview like this available on the Web?

Thanks!
David

2703. ARLB036 More call signs requested

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb036.1998@arrl.org>
Source record: 171952
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB036
ARLB036 More call signs requested

ZCZC AG36
QST de W1AW
ARRL Bulletin 36 ARLB036
From ARRL Headquarters
Newington CT May 19, 1998
To all radio amateurs

SB QST ARL ARLB036
ARLB036 More call signs requested

The ARRL has petitioned the FCC for changes in the administration of the special event call sign program. The League wants the FCC to amend its rules to permit the use of additional special event call sign formats in addition to the current one-by-one (1x1) format now authorized.

The petition also asks the Commission to include call signs denoting US territories and possessions having no mailing address within the special event program. Use of those call signs would be limited to locations corresponding to and denoted by the call sign.

The special event call sign program is administered by several private sector coordinators, including the ARRL. Those wanting a special event call sign for a limited period are able to reserve one via the Internet. Under current rules, 750 combinations of 1x1 format call signs are available for limited periods. Stations operating with special event call signs still must identify with the station's regularly assigned call sign at one-hour intervals.

According to the petition, demand for special event call signs has been low. In the first seven months of the program, only 237 call sign reservations had been coordinated. But, the League says, there has been significant demand for special event call signs outside of the 1x1 format and for DXpeditions to locations under US jurisdiction which do not have US Postal Service mailing addresses. The League also says there's ''a great deal of interest'' in additional special event call sign formats that would let the call sign symbolize a particular event or type of event.

The petition requests that the FCC make available to the special event call sign program several additional call sign blocks not currently used for amateur primary station identification.

Specifically, the League wants the Commission to include 1x1 call signs with a letter X suffix as well as 1xx1, Nxx2, and 1xx3 formats, as part of the special event program. The use of the Nxx2 format avoids conflicts with TV translator call sign assignments, which start with K or W.

The ARRL also asked that call signs appropriate to US territories and possessions such as Desecheo Island near Puerto Rico or Kingman Reef in the Pacific be made available to DXpeditions for limited periods.

The League's petition says the proposed changes would ''permit significantly increased flexibility in private sector special event call sign administration without any adverse impact.''

A comment period will be announced when the FCC assigns an RM number to the League's petition.

2705. How to tell if you are a ham

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: burt2@my-dejanews.com
Message-ID: <6jt4qh$67j$1@nnrp1.dejanews.com>
Source record: 171954

From: AD4PN@KF4OJ.#ARCFL.FL.USA.NA
To : HUMOR@ALLUS

You are a Ham Radio Operator if...

... when you're at a restaurant and the waitress asks you if you would
like a refill of your drink and you say, "Q-AS-AL".
.. when you overhear two secretaries from your department talking about you
in the ladies' room because the vents are connected to the men's room and you
approach one of them and say, "I couldn't help but overhear your 'traffic'."
... you're doing your day job as a DJ of a 100,000 watt FM commercial
radio station and at the top of the hour you say something along the
line's of "The best music of yesterday and tomorrow, KB8GYS Cincinnati."
...you get into auto accidents while passing through new parts of the country
looking to see what kinds of antennas people have on top of their houses.
... your XYL, who is still 130 lb. and tremendously attractive comes
to you in a hot pink, topless teddy and starts nibbling on your
shoulder and you tell her to hang on for a minute because you're
just about to make that contact with East Molohavnia.
... when your club's repeater and the TV station that you work for
are in the same building and are damaged by a hurricaine and you
go up and fix the repeater BEFORE you fix the television station.

This joke was sent by John, KB8GYS

The Radio Amateur is:

CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

2707. 144 mhz Unlicensed Stations

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: Marv <mzl02@clla.hwu.org>
Message-ID: <6jsv33$gu5$1@supernews.com>
Source record: 171956

The number of unlicensed stations on 2 meters seems to
be growing each month, especially in metropolitan areas.

We have several in my are that we have positively
identified. Does anybody know what, if anything, can be
done to get these people either licensed or removed
from the air? The regional FCC office is not interested.
In fact, the person answering the phone swore and
cursed at us, and told us the FCC didn't care and then
hung up on us. The same thing happened when we
call FCC Washington, DC.

Is this the way of the future, or can something be done
about these unlicensed stations? The unlicensed
operators laugh when we use our call signs and tell
us licenses are no longer required for 2 meters.
Perhaps they are right.

Thanks,

Marv

^^^^^^^^^^^^^^^^^^^^^^
^^^^^^

The phrase "the people" refers to all citizens, just as the phrase "the people" in the First Ammendment, Fourth Ammendment and Ninth Ammendment also refers to the individual citizen. It only takes a limited amount of effort to research the second ammendment (which you have obviously not done) to see that "militia", as referred to above, means the entire population:

Benjamin Franklin: Those who would give up essential liberty to purchase a little temporary safety, deserve neither liberty nor safety." (Nov 11 1755, from the Pennsylvania Assembly's reply to the Governor of Pennsylvania.)

Thomas Jefferson: "Laws that forbid the carrying of arms... disarm only those who are niether inclined or determined to commit crimes. Such laws only make things worse for the assaulted and better for the assassins; they serve to encourage than to prevent homicides, for an unarmed man may be attacked with greater condidence than an armed man." (1764 Letter and speech from T. Jefferson quoting with approval an essay by Cesare Beccari)

John Adams: "Arms in the hands of citizens may be used at individul discretion in private self defense." (A defense of the Constitution of the US)

George Washington: "Firearms stand next in importance to the Constitution itself. They are the people's liberty teeth (and) keystone... the rifle and the pistol are equally indispensable... more than 99% of them [guns] by thier silence indicate that they are in safe and sane hands. The very atmosphere of firearms everywhere restrains evil interference [crime]. When firearms go, all goes, we need them every hour." (Address to 1st session of Congress)

George Mason: "To disarm the people is the most effectual way to enslave them." (3 Elliot, Debates at 380)

Noah Webster: "Before a standing army can rule, the people must be disarmed, as they are in almost every country in Europe." (1787, Pamphlets on the Constitution of the US)

George Washington: "A free people ought to be armed." (Jan 14 1790, Boston Independent Chronicle.)

Thomas Jefferson: "No free man shall ever be debarred the use of arms." (T. Jefferson papers, 334, C.J. Boyd, Ed. 1950)

James Madison: "Americans have the right and advantage of being armed, unlike the people of other countries, whose people are afraid to trust them with arms." (Federalist Paper #46)

George Mason: "I ask you sir, who are the militia? They consist now of the whole people." (Elliott, Debates, 425-426)

Richard Henry Lee: "A militia, when properly formed, are in fact the people themselves... and include all men capable of bearing arms." (Additional letters from the Federal Farmer, at 169, 1788)

James Madison: "A WELL REGULATED militia, composed of the people, trained to arms, is the best and most natural defense of a free country." (1st Annals of Congress, at 434, June 8th 1789, emphisis added.

IMPORTANT NOTE: Back in the 18th century, a "regular" army meant an army that had standard military equipment. So a "well regulated" army was simply one that was "well equipped." It does NOT refer to a professional army. The 17th century folks used the term "STANDING Army" to describe a professional army. THEREFORE, "a well regulated miliita" only means a well equipped militia. It does not imply the modern meaning of "regulated," which means controlled or administered by some superior entity. Federal control over the militia comes from other parts of the Consittution, but not from the second amendment.

Patrick Henry: "The people have a right to keep and bear arms." (Eliott, Debates at 185)

Alexander Hamilton: "... that standing army can never be formidable (threatening) to the liberties of the people, while there is a large body of citizens, little if at all inferior to them in the use of arms." (Federalist Paper #29)

"Little more can be aimed at with respect to the people at large than to have them properly armed and equiped." (Id) {responding to the claim that the militia itself could threaten liberty}" There is something so far-fetched, and so extravagant in the idea of danger of liberty from the militia that one is at a loss whether to treat it with gravity or raillery (mockery). (Id)

Samual Adams: "The Consittution shall never be construed to prevent the people of the United States who are peaceable citizens from keeping their own arms." (Convention of the Commonwealth of Mass., 86-87, date

still being sought)

Noah Webster: "Good intentions will always be pleaded for every assumption of authority... the Constitution was made to guard against the dangers of good intentions. There are men in all ages who mean to govern well, but they mean to govern. They promise to be good masters, but they mean to be masters." (Source still being sought)

Thomas Jefferson: "On every occassion... [of Constitutional interpretation] let us carry ourselves back to the time when the Constitution was adopted, recollect the spirit manifested in the debates, and instead of trying [to force] what meaning may be squeezed out of the text, or invented against it, [instead let us] conform to the probable one in which it was passed." (June 12 1823, Letter to William Johnson)

Subject: QST proves you right, Burt
To: burt@innocent.com

Burt,

I received the April issue of QST in the mail yesterday. I was reading the correspondence on
page 24. One of the letters is titled "Top ten things a ham needs in his/her shack."

Reason #2 reads "A picture of you with your arm lovingly wrapped around your loved one, ie, that
brand new transceiver!"

It pretty much emphasizes your point of where hams place their priorities.

May still be too drastic -- Drop Novice & Technician They can move up
to General by passing General
written elements. Time period for upgrade is 2 years or expiration of
existing license -- which ever is first.

Tech Plus -- As is with more legal & operating procedures
General -- 5 WPM, written technical as is, written legal & operating
procedures better defined.
Advanced -- 10 WPM, written as is.
Extra -- As is.

Hams must be better at self policing. There is far too much harrasment
and savage and vile responses to
cooperative or coordinative procedures. There needs to be a stronger
supportive stand for the hobby.
I hear a lot of folks bitch about the ARRL, but very few do much about it.
Your government doesn't
listen to a mob of complaoners, but they do listen to organized groups who
provide solutions to problems.

Leave it to the government, and they will cheerfully kill the hobby and
auction the frequencies off to folks
who support the politicians latest craze.

Fleaspeak - the vernacular of hamfest fleamarkets.

Fleaspeak English Translation

This rig puts out a BIG signal It's 50 kHz wide
This is a really good CW rig. It doesn't work on SSB.
This is a really good SSB rig. It doesn't work on CW.
This is a really good rig. It doesn't work on CW or SSB.
The transmitter is outstanding. It doesn't receive.
The receiver is really hot. It doesn't transmit.
This rig is really hot. It's stolen.
It seems to be a vintage regenerative type. It oscillates.
I just retubed it. Got 'em from questionable used tube stock.
I just aligned it. The slugs on the transformers are jammed
I don't know if it works. it doesn't work, probably never has.
It doesn't chirp. it doesn't chirp because it doesn't transmit.
The audio sounds great. The 120Hz buzz is faithfully reproduced.
I just had it serviced. I sprayed WD-40 over all the wiring.
It comes with the original box. Just brush out the kitty litter.
Better buy it now, cause it won't last. no transation needed.
Sure, it works at full power. It sucks all it can from the wall.
This rig has wide frequency coverage.
It drifts up and down and out of band.

Frequency stability is great.
The VFO doesn't work - you'll have to use crystals.

Real popular rig in its day.
There were whole HF nets on the repair and maintenance problems.

QST gave this one a really great review.
The language broke new ground for profanity.

It might need a bit of tweaking.
Marconi himself couldn't fix it, much less align it.

It was used in government service.
It was stored outdoors on a wooden pallet.

The dial drive may need lubricating.
the gears are stripped and the setscrews frozen.

I plugged it in to check that it lights up.
The light came from the two foot high flames.

I'm selling it because I have two of them.
I'm getting rid of my parts radio.

You won't find one at a better price.
Better from the point of view of the seller.

This is a collector's item.
the manufacturer just went belly up and won't honor the warranty.

It came from an estate sale.
If you have any problem take it up with the owner.

I had it on the air just last night.
And you thought the woodpecker was gone.

It worked last time I used it.
if it still worked I'd still be using it.

The only lightning damage was a fuse.
The only lightning damage I recognized was a fuse.

I have the [...] somewhere. I'll send it to you.
you'll never see the [...].
I'll help you carry it to the car.
I'll do anything to unload this boat anchor.

It works ok on 80 meters.
It had some parasitics
but I got in and really screwed it up and now I want to unload it.

The tubes used by this rig are worth the asking price.
The rig uses a rare 7360 beam deflection tube for a balanced
modulator, but it's blown and you'll spend \$80 to get a new one.

This is the rig of my dreams. I really wanted one of these as a
kid, but now <snif> I've got to let it go.
As I've gotten older, I've learned what a hunka junk it is.

The signal quality of this rig was easily recognizable in its day.
The high distortion and bad audio quickly identified this rig.

This rig will bring back the feelings and atmosphere of vintage
ham gear.
The bypass capacitors to the
AC line put enough voltage on the chassis to give you a shock
in the lips through the microphone, and it smokes so bad when
you turn it on that you'll probably start coughing and wheezing.

I'd keep this baby, but my wife is making me clean everything
out.
I finally got around to giving this thing the proverbial heaveho.

There are a couple of other people interested in it.
someone sat on it to tie his shoelaces while walking past the table.

You'd better buy it now, because I'm leaving soon.
The previous buyer and his brother,
Guido, are heading back toward the table and they aren't smiling.

2715. DM37 THIS WEEKEND ON 6 METERS

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: hmk~~arse#@earthlink.net
Message-ID: <3560cc67.2017615@news.earthlink.net>
Source record: 171985

To All:
For those of you who would like to add DM37 to your logbooks on 6 meters, I will be operating a portable station in that grid during the Memorial Day holiday weekend. I will also activate DM36 on Friday May 23 and Tuesday May 26 while mobile to and from the portable operation.

Nothing fancy for an antenna, just a halo atop a 10' mast and the station will be powered by a deep cycle battery and vehicle alternator. I will split my time calling/monitoring between 50.125 and 50.200 and will be using USB. Once contacted, I will entertain requests for AM and perhaps FM contacts. My goal is to have fun and give this grid to as many of you as possible. All confirmed contacts will receive a 'limited edition QSL card' and my gratitude for helping to make my few days away from work more fun.

73,
Howard KE6MAK

>ance, he has also talked to the ARRL and to a Ham-Attorney out of Boston.
>All to no avail. He was advised by said attorney not to get involved with
>the state politicans as they would more than likely make matters worse.
>
>

Well, as a former Mass. resident, first he should probably try to get
the guidelines for installing the tower from the manufacturer. I assume
it's Tri Ex since you mention them by name. The structural engineer
should then be able to do calculations to see if his antenna meets
those guidelines and present the calculations to the Superintendent.

I also note that when I left, Massachusetts had at least proposed
a bill to allow towers and antennas except in certain designated areas
except either for preserving historic districts and landmarks and/or for
safety reasons. If the Superintendent can't find a safety reason to
reject for safety based on meeting the guidelines for installation or
likelihood of surviving let's say an 80 mph wind (definitely possible
in Taxachusetts) or a hundred mile wind with this amount of guying
and anchoring structure and so many sq feet on top of the tower.
Sadly it usually pays to get the permit first rather than trying to
qualify afterwards.

I recently purchased a MKII and it has a phaser sound on 2 meters when I tx. I have a Kenwood V7A and it doesn't have this problem when I tx on the same antenna, coax, etc. It really bothers the people I talk to, and bothers me knowing it is there... but I can't hear it myself... has anyone had this problem with this radio or might know a quick fix???..

Thanx

Seth.

We don't really need to argue about truck .vs. trains on the
rec.radio.amateur.??? newsgroups do we? America needs both.. let's just leave
it at that :)

Hey moron! Obviously you haven't followed the thread all the way.
Your 'smart' opinions have already been covered, why dontcha read
the rest of the stuff before you open your mouth.
I take it that you also missed me saying that this should be moved
to another NG.

Figures...

2730. ASAPS V4 HF Prediction Software Out Now

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: patrick@icarus.syd.ips.gov.au
Message-ID: <6jqvst$lkv@ipso.ips.gov.au>
Source record: 172000

IPS RADIO AND SPACE SERVICES - ASAPS V4 HF SOFTWARE

A new version of ASAPS, the IPS HF Frequency Management Software, is out now.

ASAPS V4 features include:

* Point to area predictions for the best usable frequency (BUF), S/N ratios, noise, probability and take-off angles.

* 3-D antenna gain patterns, specified in terms of bearing as well as take-off angle and frequency. These can now be imported from standard packages and text files.

* Step-by-step printed tutorial. The tutorial includes a number of exercises to help the user make the most of the program. Areas covered include HF propagation principles, background information on terms used in ASAPS, how to use ASAPS databases and how to generate and interpret ASAPS predictions.

* Year 2000 compliance.

Free demonstration copies are available upon request from IPS, or you can download them from our web site at www.ips.gov.au/asaps/

ASAPS V4 is available directly from IPS for AUD350, or as an upgrade from ASAPS versions 2.0 or higher for AUD50. Pricing and delivery details are available from distributors on request. For more information, please contact:

IPS HEAD OFFICE: Mr Patrick Phelan - asaps@ips.gov.au

NORTH AMERICA: Mr Jacques d'Avignon - monitor@rac.ca

SOUTH AFRICA: Pretoria - Prof Duncan Baker - apc@acenet.co.za

>
>Total BULLSHIT
>
Come over to talk.politics.guns and let us have at you for a while,
or you afraid to go where the real discussion about guns and the second
amendment really is?

>Here is what it REALLY says:
>Amendment II
>
>A well regulated militia, being necessary to the security of a free
state,
>the right of the people to keep and bear arms, shall not be infringed.
>
"The people" are individuals unless you only believe that
collectives have rights and individuals do not.

>It says NOTHING about INDIVIDUALS, N O T H I N G .
>
Yes it does. Who are "the people"? and don't give me this crap
that "the people" being defined as only the National Guard.

>>Numerous writings by our founding fathers state that
>>the prime reason for this right of citizens to own
>>guns is NOT to promote hunting or sport shooting,
>>NOT just for self-defense against criminals, but,
>>and most importantly, for defense against
>>GOVERNMENT TYRANNY.
>
>
>
>Where is that stated?
>

"The right of the whole people, old and young, men, women and boys, and not militia only, to keep and bear ams of every description, and not such only as are used by the militia, shall not be infringed, curtailed or broken in upon, in the smallest degree;...any law, State or Federal, is repugnant to the Constitution, and void, which contravenes this right..." 1 Ga. 243 (1846)

"The right of a citizen to bear arms, in lawful defence of himself or the State, is absolute. He does not derive it from the State government. It is one of the "high powers" delegated directly to the citizen, and 'is excepted out of the general powers of government.' A law cannot be passed to infringe upon or impair it, because it is above the law, and independent of the law-making power." 24 Tex. 394 (1859)

Come over to TPG and really get an ear full.

I thought I saw a modification somewhere that would allow me to modify an HTX-404 for use in 800 mhz....IS anyone familiar with this? Please reply via email.

2736. Michael Jordan the Joke

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-19 00:00:00 UTC
From: henry99morse@hotmail.com
Message-ID: <6jrel7$8pb$1@nnrp1.dejanews.com>
Source record: 172006

Michael Jordan, the biggest joke to ever play basketball.

I have posted messages like this several times in the past,

and isn't it interesting, the post is deleted in just a few hours. This doesn't happen to other messages. Looks like the Pussy Platoon just can't handle the truth.

The moronic Jordan Fanatics just can't take it, can you?

Your beloved JORDAN is nothing but a MEDIA CREATION. The newsmedia created Michael Jordan, not Jordan himself. No one with field goal percentages and free throw percentages as poor as Jordans, could receive the ratings this goofball receives.

Who does coach Phil Jackson send to the free throw line to SHOOT TECHNICAL FOULS???

Not Jordan, but STEVE KERR.

And why not. Steve Kerr has a 92% free throw percentage, compared to Jordan's 79%.

Oh goodness me, we're not supposed to point out such things, are we???

Oh yes, NBC's Bob Costas wouldn't dare make a point like this to his viewers. Ditto for that other moron Bill Walton, who's brain is probably no larger than what you'd find in a chicken.

Did you see how many times Michael Jordan lost and threw away the ball in the first game against Indiana??? Yes, Jordan does this all the time.

BUT THERE WERE NO RADIO OR TV COMMENTATORS TO DRAW ATTENTION TO IT, NOT EVEN THE ANNOUNCERS ON THE INDIANA PACER RADIO AND TV STATIONS, FEEDING THE GAME BACK TO INDIANA STATIONS.

When Dennis "transvestite" Rodman takes a shot and misses, the moronic NBC announcers throw fifty brickbats at him: "there goes Rodman with an absolutely horrible shot", or similar such insane bullshit.

Let Saint Michael do the same thing, and oh dear, look at how the NBC, TNT, and TBS announcers simply fall out of their chairs to

********** M A K E E X C U S E S **********

for poor Saint Michaels shortcoming.

Really, how stupid can you Bulls(shit) fans be??????????

Yes, the newsmedia has taught you all very well how to THINK WHAT THEY TELL YOU TO THINK. Look at what appears on the newsgroups. There's your proof.

Just like in George Orwell's book, "Nineteen Eighty Four". The plot is unfolding just as Orwell predicted (Orwell's real name, BTW, is Eric Blair) :-)

Saint Michael Jordan, supposedly the greatest play in NBA history, cannot shoot layups with his left hand. Yet he is supposed to be the greatest of all time. What kind of stupid stooge believes that nonsense??? You morons believe it because the newsmedia tells you to believe it, WITHOUT QUESTIONING.

How many times have we seen Saint Michael charging down the court on a fast break,

ON THE LEFT SIDE OF THE COURT,

only to put the ball up against the glass

********** W I T H H I S R I G H T H A N D **********

That is, when he isn't in a position to slam-dunk it.

Jordan is forced to do this, even though it gives the defender a great opportunity to block the shot, because Jordan has NO CONFIDENCE in the use of his left hand, and he has no such confidence because Saint Michael Jordan is nothing but an overrated JOKE.

I have seen high school kids able to use their left hand for layups, with equal confidence to their right hand, and the NBA has a few players also who are good with their left hand. Dedicated NBA watchers know who I mean--no need to list them all here.

The significant point IS, Saint Michael Jordan, the darling of the degenerate media, is NOT ONE OF THEM.

Keep plugging for your beloved Saint Michael, you stupid stooge regulars to this newsgroup: maybe he will put in a good for you when he gets to basketball heaven. And naturally, there is a heaven, right? Sure, says so in the Bible. It the Bible says so, the SO IT MUST BE, just like with Jordan the Joke.

And perhaps the worst sin of all is Jordan is a BALL HOG, A SHOT HOG, A CREDIT HOG. Jordan MUST outscore all his teammates, and it doesn't matter to his fat head how many idiotic, off-balance shots he has to take to accomplish his goal. It matters little to Jerk Jordan how many times he refuses to pass the ball to a wide open teammate--- Jordan MUST get more points than anyone else on the team, least his IMAGE as Super Jordan becomes tarnished. Naturally, Jordan knows the media will cover his smelly ass in such matters. Many of Chicago's losses are due precisely to this nonsense, but the newsmedia refuses to point it out, and knowing the mentality of the American public, if you don't see something on ###TV###, then it just isn't true. Whatever is said on TV becomes ETCHED IN STONE, the stone in the cranium cavity of the ignorant, gullible and moronic American public.

Enjoy your Jordan, suckers. Truly, YOU DESERVE EACH OTHER.

average'Average' means being run-of-the-mill,
mediocre, insignificant, an also-ran, a non-entity.
'Average' is the top of the bottom, the best of the worst,
the bottom of the top, the worst of the best.Which of these is you?
Being 'average' is the lazy person's cop out,
it's lacking the guts to take a stand in life;it's living by default.
Being 'average' is to take up space for no purpose,
to take the trip through life but never to pay the fare.
Being 'average' is to pass one's life away with time,
rather than to pass one's time away with life.
To be 'average' is to be forgotten once you pass from this life.
The successful are remembered for their contributions,
the failures are remembered because they tried,
but the'average', the silent majority, is just forgotten."

No, nor does Bank Robbery constitute a major number in violent crime
related deaths.

> No kids ever killed teachers and students with a pick ax.

Really...I find that surprising, world wide? How about Rwanda?...BUT if you
do your homework you will find world wide that violent crime related deaths
is not attributed to gun ownership...indeed just the opposite was found to
be true. A fellow at OSU finished his findings last your if you are
interested. It is gruesome.....

13 June Dennis MA BarnstableARC @ThepSmithRd $5/sp@7

Come to Burtvention 98 in June on the Cape. Meet your favorite Burts.
See the actual computers they use to entertain and amaze you. An
autograph session will be held and a panel discussion will follow. Try
to sell your junk at the flea market and spend your day dickering with rich
old men over 50 cents. Pay 2.00 for hot dogs when you can go down the street
and get 6 for that price.

Helpful ham hint. Buy a 7 buck table- just split it between several
people and save yourself the 5 buck rip-off fee.

Just as the U.S. Navy announces that its academy cadets will no longer learn celestial navigation due to the reliability and accuracy of satellites, the G-IV is lost.*

Of course, the lesson to be learned is that we shouldn't completely abandon the older, proven systems in favor of embracing the flashy high-tech modes.

Jeff KH2PZ / 7

*Yes, I know the G-IV was a comm sat, not a nav sat, but that doesn't lessen the lesson.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

2751. WTT: Icom IC-T8AHP for an FT-50RD **TRADE**

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-20 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <6jv6qugmp1@gaia.ns.utk.edu>
Source record: 171822

I have an Icom IC-T8A high power HT that is only 2 months old. It
is a GREAT radio and covers 6 meter, 2 meter, and 70cm GREAT with 4.5 watts.
When hooked to 12+VDC it is a little over 5 Watts. It has been extended RX
moddified to include the following freqs.

50-75.999MHz
76-107.999MHz
108-135.999MHz (AM air)
136-229.999MHz
300-399.999MHz
400-599.995MHz
600-999.995MHz

The mod is a simple push button and then power on mod that can be
undone by reseting the radio. I want to trade it for an FT-50RD with the
deluxe keypad built in preferably. The only reason that I want rid of this
GREAT HT is that 6 meter activity here is dead there is no use for it on
FM. All the activity is on SSB and there are no repeaters near me to hit.
If anyone is interested and has the FT-50RD then please E-Mail me at one
of the addresses below. Thanks....

Hi Jeff,

Yes, it's rather curious about G-4, isn't. This makes 2 birds within a bit more than a year? Or how long has it been since the T-? sat disappeared? Sorry, I don't recall the name; the bird that had all the PBS feeds on the KU portion and the FOX and ABC on C band.

Looks like there would be better "pilots" flying these birds. :)

73,
Jim

2754. Decoding CW via PC --- what works?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-20 00:00:00 UTC
From: "Robert D. Keys" <rdkeys@seedlab1.cropsci.ncsu.edu>
Message-ID: <6jv8dt$80o$1@uni00nw.unity.ncsu.edu>
Source record: 171825

OK, a CW dummie I am not, and with that said, I am looking for
good workable ways to decode CW from receiver audio or IF output.
What devices/sofware these days seem to work reasonably well.
I have this 486-66, nondescript sound card, rs232 ports, etc., that
needs to play some CW on its screen. I have a fine CW keyboard of
my own design and programming, already, so I don't need anything but
the decoder section. I can probably find a baycom dongle thingie
or build one if I need to. But, since most of the problem is software,
that is where I need to concentrate. My programming skills are fair
to good on dos or unix, so I can probably adapt something if needed.
What kinds of things are known to work currently?

Any pointers appreciated.

REGARDS
DE NA4G/Bob UP

The argument is about the definition of people.
I believe it to be we the people as in every citizen in the United
States os America. Therefore Congress can not pass a law which
infringes on ME as a person covered in the group called people.
So in that context the second amendment bars congress from passing
ant gun law.
How did a debate about guns get into the newsgroup?

Yup, there's a valuable lesson here. Launch more than one
satellite. It is much easier to switch satellites in operation
than it is to switch entire operating methods (i.e. "old" vs. "new"
technology).

Here in Santa Barbara, Calif., we've had unlicensed hangliders using 2 meter FM simplex on 144.250. Evidently finding all the co-ordinated 2 meter FM simplex freqs too be to busy, the local hangliding hams chose 144.250, despite being informed many times that it is intended for SSB.

So tuning in 144.250 on a nice day for flying, I've heard licensed hams (who often don't bother to ID) talking to other stations who only use CB-type handles. Sometimes an unlicensed station will make a call like "Batman calling KC6---".

An unverified rumor claims that the local hang gliding school will loan 2 meter HTs to unlicensed students for training flights.

I've heard this problem is widespread among hang gliders in other parts of California as well.

2767. To QSL or Not to QSL...

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-20 00:00:00 UTC
From: Thomas Russo <russo@llama.swcp.com>
Message-ID: <y74g1i4irdx.fsf@llama.swcp.com>
Source record: 171838

I'm new to the hobby, and have a question of Ham Ettiquette.

I made my second HF contact ever last night: I answered a CQ from a station in Pennsylvania (I'm in New Mexico) on 30 meters. I was pretty amazed he could hear my <2W signal, and I think it might have been pretty weak by the time it got to his end, but we did exchange calls and 73, albeit very little else.

So since I'm just starting out here, I'm a little shaky on whether I should ask for a QSL from such a tentative contact. I'd obviously do it by sending a self-addressed, stamped envelope along with a QSL of my own, but were you the station on the other end, would you consider such a brief contact something that should be QSL'd, and would you bother answering a request for one? Am I worrying too much? My initial thought was to write off the contact as not significant and not waste his time asking for a confirmation, but then it occurs to me that I remember reading that when you work DX stations you pretty much just check in and sign off, so perhaps this is OK, too. What would you do? I know it probably doesn't seem like such a big deal to a veteran ham, but from my point of view this contact is 50% of my experience in HF, and I'd like to milk it for all it's worth :-)

Actually, the Naval Academy has no Cadets at all. They're called
"midshipmen". But seriously, I agree with the last comment. Redundancy
of modern technology is usually preferable to redundancy with old
technology. There are a few exceptions of course, such as an all-out
nucleur holocaust.

What's is No-Code license ? There is no such thing called "No-Code
license" in both US and Canada.

If you are talking about "Technician" or "Basic", I am sure # of
people die (technician or basic) are greater than the number of new
bees. In Canada, the license is issued for life so the number of
"basic" operator increases automatically (one dies, the license still
remains). In US, the same thing will happen until we see actual fall
in number of technicians (there would be still licenses for the people
who already passed out).

no. once someone starts to e-mail someone privately, he will usually
get complained (ISP) and he loses his account for unsolicited e-mails.

I can send the personal e-mail to 100s of people here, but probably I
get lots of complaints.

Must be good working boards. The UI-7 is the AM/FM plug-in. The UT-30 is the tone encoder unit.
I may also be interested in a FL-101 250HZ CW filter.
I also want the service manual for this radio (not the user manual)
All of this stuff is for a ICOM 725 transceiver

2786. HamCom decoder, and POCSAG

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-20 00:00:00 UTC
From: ki5xp@mindspring.com
Message-ID: <6k0a35$2i8_002@news1.newscene.com>

I recently went to the HamComm decoder page and noticed the increase in price. So at Dayton, I purchased the board from FAR Circuits to construct the decoder, completed the project and it seems to work fine in both JV Fax and Hamcom, yet is not recognized at all in either POC32 or POCFLEX. Anyone have any ideas as to what might be the problem? I noticed that the schematics for the board as they are to be constructed ties pin 6 of the 741/941 to pin 6 of the DB-25 which is DSR, yet the diagrams on the POCFLEX page shows that pin 6 of the Op Amp should be tied to pin 5 of the DB-25 pin, which is shown as CTS. I've cut the trace to 6 and jumpered it to 5, yet the board still doesnt work, and although Poc32 allows for both DSR and CTS on the hardware settings, it doesnt recognize the board, nor does it decode data. PocFlex's little "spinny" thing in the top corner doesnt spin, meaning it's not working correctly either, yet HamCom's nifty little spectrum scope clearly shows that it is correctly recieving the mark and spaces, and although it hasnt actually decoded "correct" data, I blame that on lack of knowledge of the program.

I've check all configs on both Poc32 and PocFlex, and neither seem to help, anyone have any ideas?

Tim,

This is just another example of your campaign of mis-information
and lying here in rec.radio.shortwave.

Your on-going plan is to accuse your opponents of the very tactics
that you have been employing. For example, your claims of
jamming the Liberty Net.

It is *YOU* that jams the Liberty Net. Not the net members that
have been there for many years. Your lies may confuse the casual
readers, but not anyone that is knowledgeable.

You try to paint a picture of yourself, as an innocent ham, that just
happens to be using 3.950 (ie. laying in wait) and then suddenly
the evil net members come along and interrupt your political
ranting, music playing, and tarzan yells.

What is it that you fear? Why do you continually attempt to disrupt
the conversation that occurs on 3.950?

Could it be the dissemination of ideas and opinions that you don't
agree with? If these ideas are so offensive to you, why not just
change your frequency, and transmit somewhere else?

Only a socialist or a marxist would advocate the censorship of ideas
that didn't fall into line with the state. And that's the business you
are
in, Tim.

Censorship. -- Preventing the free flow of opinions and ideas.

You do this in two ways:

1) By physically preventing the reception of signals xmitted on 3.950
2) By posing as a victim, claiming that you have a 'right' to be there
over other hams.

And that's the "Big Lie" that you and your fellow jammers are using.
You keep whining about how you're the victim. And you
know that sooner or later some percentage of the readers will start to
believe you.

The "Big Lie" worked for your idol, Adolph Hitler, and you are hoping
that it will work for you.

2788. Re: To QSL or Not to QSL...

QSLing is another aspect of ham radio in which there are many different opinions. When I first started 40+ years ago I liked to put them on the wall. But I never got any awards, even WAS, I just wasn't interested. In recent years I threw them all away. However to the best of my knowledge I have always returned QSLs on request and you don't need a SASE with me. After putting $5000+ into the station a 20 cent card won't kill me. I think you will find most average hams this way. That probably won't be true of DX or rare stations that get 100's of requests though, so if you really need the card then I agree a SASE is good insurance but for most QSO's just send the card and I expect you will find a good return.

You'd be smart to go to a library and look for the ARRL Handbook. You
will find more than enough information there, and it is a standard enough
reference that you are fairly likely to find a copy at your library.

You didn't say where you are getting your audio from, but you must tap
it from the discriminator unless you are reshaping the audio afterward.
There is just too much filtering that takes place to insure that POCSAG
or FLEX will decode accuratly if you take it from the speaker or
headphones. 73s Mike ka3jjz@erols.com

What a bummer, Marv. Try to touch bases with the ARRL Auxillary/Official Observer people. They probably have the track on who exactly to report violations to, how to document them, hot to see it through all the way to Notice of Apparant Liability, etc.

Now... to get these guys licensed, you might try meeting one of these bootleggers over a brew and maybe inviting him over to see your station. Make a few contacts, preferably DX, on a couple of different modes. Have a copy of "Now You're Talking" handy to loan him. Make sure he knows he can call you if he has a question. Find out when and where he can test for his ticket. Give him a copy of a freeware or shareware Morse Code tutor program if he has a computer, or make some tapes if he doesn't.

You might not have an easy time of it... don't lose your temper and get disgusted if you get mouthed off at. Try to be as diplomatic as possible. The "You BETTER get a license or I'll come tear down your antennas!" approach probably won't win very many converts. Something more along the line of "Hi. I'm so-and-so, N0QSO, and I heard you on two meters, and I figured since you

were interested in Ham Radio, you might want some help getting your license," might keep the door open for a minute. The guy already knows he's illegal. Don't make an issue of it because he probably gets a kick out of it. Instead, show him all the neat things a ham can do besides yak into a handi-scratchi. (This might sound a bit tacky to us hams, but I always mention the legal power limit of 1500 watts. That gets CBers' attention too)

The moral? Try to win their hearts and minds first... THEN burn their huts down. (paraphrased figure of speech... do NOT resort to arson, please)

Unfortunately, they are right. The rudeness and blatant disregard for the law we hear daily on amateur radio is simply a reflection of society in general. The bootleggers realize they can do as they please and there will be no negative consequences for their actions. How could you expect otherwise from a liberal government that coddles criminals, puts the police on trial, lets the guilty run free, and attempts to prohibit gun ownership by it's citizens?

>was going to compare Burt to other trolls. Get it now? See the connection
>troll?

If I'm nothing more than a troll, why do you insist on perpetuating my threads by answering me? Ditto for your answering of Burp. For someone who chronically complains about trolls, you sure spend a lot of time answering those who are, by your own definition, a troll.

>Now explain to me how you can read my post which says "it's right in line
>with the
>typical troll like Drew or Masa, lot's of lip
>service and no real answers" and somehow come up with a thought about a
>fetish.
>Please tell me how you came up with this, I'd love to know how your mind is
>working.

I think your thought process is what we're all concerned about here. You seem to have a troll fetish. Ever consider psychotherapy?

Anyone knows?
You are hung up on sex, you even admitted you screwed around.

Of course the question is Why is Burt Fisher, a
> grown man with a family of his own concerned in ANY WAY about the sex lives of> radio amatures

What is a "radio amatures?"
In any event most hams have no sex lives so therefore I am concerned about nothing. What I am concerned about is IF a a teen is normal why would he be interested in ham radio?

Because most of those guys only know how to yak into a Mic. Few have ever seen SSTV, ATV, AMTOR, RTTY, Coherent CW, antique tube gear, homebrewed stations, EME,Satellite operation, Packet gateways. FAX, contesting, trans-Atlantic or trans-Pacific DX, etc. None of these guys have heard somebody working MIR or the shuttle, or a military station passing traffic via MARS. Most are not even very accomplished appliance operators, much less engineers. This is a whole new world beyond the limited exposure most bootleggers have had.

Licensing is the first step... studying for a license does not make you into a truly knowledgeable ham, but it lays a pretty good foundation. Next is all the elmering the new ham gets from the ham community. How many hams are going to even answer a call from a bootleg op, much less share technical pointers with him? Not many, I would guess. It is, after all, illegal to communicate with an unlicensed station. A newly licensec ham, on the other hand, will usally get all the help and advice he can use, and then some. Pirates yicker-yacking at each other seldom have much useful tech info to pass on to each other other than where to get an amp, what kind of power mike is best, i.e. has the most splatter all over the band, how to hook up an SWR meter, etc.

Hello all,
I am seeking any information/details on the specs for the
following RF Power Transistor please.

RTC LV2024E45R

I'm guessing it may be a 2 Ghz device with an output power of +45 dBm.

Who is the manufacturer RTC ?

It's a flat pak device, very similar (but larger) to the Motorola
MRF200n or Mitsubishi MGF0905 device series.

Thanks.

Alan - VK3XPD

2811. WTD: Info on Rank Arena 26.5-40 Ghz Mixer ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-20 00:00:00 UTC
From: adevlin@golden.net.au
Message-ID: <35626c2d.20512455@news.golden.net.au>

Hello all,
I am seeking information on what I believe is a Rank Arena,
26.5-40 Ghz Mixer assembly - at least that's the symbol (a man
striking a large drum) stamped on one face of the unit.

Description - It is a brass machined body with 2 off WR28 (26.5-40
Ghz) circular flanges, 90 degrees apart. At each end, is a finely
threaded cap section with locking screw. Each cap is some form of
plunger/rod section, presumably used for tuning/matching each end
section.

On one face, are two connections about an inch & a half apart for coax
cables about 2 feet long. These have BNC (m) on the cable ends.

Finally - on the opposite face to these cable connections are 2 diodes
(CV2391 WE) which are kept in place and under tension by flat springs
screwed into the brass body to hold them in place.

If you recognise this hardware, I would appreciate your comments.

Thanks.

Alan - VK3XPD,
Melbourne, Australia.

You can take any dictator. This is certainly the most extreme (and most undemocratic) way of a government to control "its" people.
You should be careful, however, to compare the government's monopole of using force, as it is used in (quite democratic) countries like Switzerland, Germany or Great Britain with a dictatorship like Nazi-Germany. It is rather arrogant to condemn any idea other than Your own one. The American system of justice may be one way to go, but there are other democratic systems in the world, which realize the same idea of a free society in a slightly different manner.
BTW, do You have a reference for what You mentioned above? I have never heard, that Hitler ever seriously hided his true intentions, why he wanted to disarm the "man on the street" (except in his and Goebbels propaganda, which You won't count much on, do You?). I'd be really interested, where You have that idea from.

Regards

Robert

Provide the proof please. Where ? Which freq ? How many ?

I can't believe the "increase" in unlicensed stations since
radioamateurs ourselves aren't on 2m anymore (as often). They can
call CQ and no one answers because no one is on freq unless they call
for their friends etc.

Don't count on it. Here, in Rochester, the weapon of choice to kill
teachers and students is also the knife. Unfortunately, it has proven to
be a highly effective one.

>call FCC Washington, DC.
>.

The above attitude demonstrates the arrogance of
FCC employees. Marv's experience with the FCC is
duplicated hundreds of times daily, across the nation.

Money which Congress appropriates for FCC
enforcement is instead going into the ridiculously
overinflated salaries of FCC bureaucrats! The phone
clerk who cursed at Marv was probably making close
to $40,000 a year, for swearing at tax paying citizens!
Compliance clerks are making on the average of
about $85,000 annually, BUT what compliance do
we see? NONE! Unlicensed operators are on the
increase in all major U.S. cities.

Actually, the National Socialists, though they were far from Second Amendment-type purists, considerably loosened gun restrictions in Germany compared to the previous "Social Democratic" regime. Just compare the 1928 and 1938 laws. (A book has been published which prints the two laws side by side, so they can be easily compared. It's called _Gun Control in Germany, 1928-1945_ and I think Noontide Press in California, among others, has it. It is also for sale at a lot of gun shows.)

Guns were widely owned by private individuals in Germany from 1933-1945, but were required to be turned in to the Communist and other Allied authorities when the occupation governments were set up after the war.

....
> The American system of justice may be one way to go, but

....

I'm not necessarily disagreeing with you re the Swiss and the Americans, but this "democracy" bit is a poor use of the language.

Switzerland and the United States are republics, and have constitutions for a very important reason -- to protect us from the tyranny of the majority; to secure rights that no majority and no legislature can ever take away, no matter how large or passionate the majority is that wants to do so.

Democracy and tyranny are perfectly compatible. It's called mob rule.

Democracy and freedom are mutually exclusive.

I'll take freedom.

Cheers,

Kevin, WB4AIO.

>news.

Excitement, surely you jest.
What is exciting about ham radio?

Time after time, hams lament that "amateur radio isn't exciting
>to young people today because it has to compete with cell phones and
>computers etc". Then don't compare it to those things, but emphasize
>what is unique to amateur radio.

OK, I'll play what is unique about the HOBBY?

>If you announce a licences class out in the world beyond amateur radio, it
>helps those who know about the hobby but have no idea who to contact
>locally or where to get started.

Have you even gone to a license class taught by a typical ham?
BORING.

And I don't really think that has changed in
>the 26 years since.

You are right nothing about this hobby has changed.

If amateur radio isn't out there,
>then peole will scratch their heads and wonder what a "hamfest" is or
>what a licensing class is or even "what in the world is amateur radio"

Yes the man on the street is wondering about that all the time.

Would be a pain in the keester to pull up those LOOOOONG telescoping antennas, though. FRS' UHF frequencies would serve their purposes much better. But have you seen the prices of those things? $150 for a full 14-channel hand-held unit. Not a good deal when people are always selling used HTX-202s for $100 with 10X the power output plus provisions for adding external antenna, mic, speaker, and power.

This isn't surprising. But, the practical rudiments of Celestial Navigation
can be picked up on the fly in 3 or 4 weeks by anyone familiar with other
facets of navigation.

The USMMA at King's Point doesn't teach its cadets very much about Celestial
Nav either... they pick most of it up aboard ship during their first sea year.
I would assume that Navy Middies still do likewise.

Hi Bob. The only CW decoding program I have used is good old HAMCOMM, which worked pretty good on the old 486. Sadly, it gives rather lackluster performance on my current machine, a 100 Hz Pentium based Toshiba notebook, as it did on my old 75 MHz Toshiba. Since you have a 486, you will probably get excellent results with it. The documentation with the HAMCOMM program has details on building the interface, which in its simplest form has only one active device, an op-amp IC, along with 3 capacitors and a couple of silicon diodes. If you use that circuit, I suggest replacing the 741 with something a little more advanced like the TL081. The TL092, a dual version of the same chip is available at Rat Shack

Any old PK-232 will also do a fair job with the PAKRATT software. I used to use the old PK sometimes as a backup copying the WLO WX broadcasts at 31 WPM (Excellent high speed practice... computer-sent code with lots of numbers thrown in there)

Old PKs are out there for around a hundred bucks with vintage 1986 or so firmware like mine. HAMCOMM is shareware and is not crippled except for a long register beg at signoff. Later versions do AMTOR, both mode A and B, as well as other interesting modes. You can download it just about anywhere, but the following site has info on more sophisticated homebrew interface ideas than the program doc. This guy is really into HAMCOMM.

http://www.accessone.com/~tmayhan/

The HC interface also works with a lot of SSTV and FAX programs, as well as other RTTY and CW software.

If you have a sound card, you might look for a program that utilzes it for CW decoding. The potential performance of a good Soundboard is nearly as good as a trained ear. I have not used any programs with my computer's built in SoundBlaster emulation for CW copy, but I am in the process of working out the kinks in using BTL for RTTY, and it equals or surpasses even the PK-232's performance. The program is freeware, and can copy without any additional interface, but relies on VOX for transmit, so I am going to build a VOX dongle for my TS-50 complete with an opto-isolator, op-amp audio filter, and attenuator to keep RF where it belong and the sig nice and clean. That way I won't have to manually ground PTT in order to transmit. Anyway, If you wanna do RTTY, check out BTL, and look for a CW prog that works with the sound card, if you have one.

Oh yeh... recent editions of the ARRL Handbook reprint a QST project by Ralph Taggart, WB8DQT, for TX aand RX of CW with a PC. Basically, the recieve circuit looks like an op amp bandpass filter, with a diode to rectify the CW note that gets through the tight filter, and a 2N4401 to amplify the result for injection into the parallel port. The diode is an LED, so you have a hardware based tuning indicator. The program can be downloaded from the ARRL BBS or the ARRL website.There is a PCB from FAR circuits, but this looks easily breadboard-able. Oh... I got the circuit description/function wrong... there is also a NE567CN PLL Tone decoder IC. The LED is just an indicator. This circuit will work at least as good as the HAMCOMM circuit if not better. The article starts on 22.24 in the 98 Handbook.

No, Masa, not if you only email to one party at a time. Nobody is going to "report" you for simple personal correspondence. Nobody will cancel your account, unless you are junkmailing to a dozen or a hundred or a thousand different people at once. There is a big difference between spam and personal correspondence, even if the personal email was unsolicited. Don't worry about it. You wanna email somebody, email them. Just don't harass or be continually abusive.

>like to milk it for all it's worth :-)
>
>--

Well, Tom, there are different opinions on QSLing. My philosophy gets booed
down by a lot of hams... I do not QSL at all any more, EXCEPT for a new ham,
and I do not save the ones I get. I am not into papering the bulkheads or
chasing awards. I don't care for recognition by others for working the rarest
or the mostest. Nor do I contest... all I do is ragchew and try out new gear
or mods to old gear. I try not to encourage contest-type 20 second QSOs... I am
not even warmed up yet fter 20 minutes... But... if you are of the majority
that ARE excited by QSLs, by all means, send yours with an SASE. Even I will
usually QSL when all I gotta do is fill out a card (Let's see... where the hell
ARE they?" and stuff it in an envelope. Being that you are new on HF CW, and
you were QRP besides, I am sure the OM on the other end will be very glad to
get your card and to reciprocate. The brevity of your contact is not an issue,
since you were not abusing the contact just to get a card. You want the card
as a momento of your CW debut. I would be surprised if you don't get a card
back.

A lot of hams will not initiate an exchange of QSLs, but rather rait and reciprocate when they recieve one. If you want somebody's card, don't just wait... send your own first, and if it is a real important one for you, send an SASE. For DX, with direct QSLing, send an IRC (international reply coupon... rcognized all over the world as equivelant to a unit of postage for overseas mail... get it from your post office) or a "green stamp", also known as a dollar bill. There is some controversy over this practice, but if you want the card bad enough, consider it. The controversy arises in that it approaches the fine line between Amateur Radio as a hobby and radio as a profitable enterprise. Remember though that in a lot of countries radio gear is very expensive relative to the average income, and even parts for homebrewing can be tough to come by. Postage and printing can get pretty expensive for aa active, sought after DX station when the poor guy is, say, a Russian coal miner who hasn't been paid in six months.

If you don't want the other guy's card, and he doesn't ask for yours, dont send one. Don't bother sending a card to the same guy you worked on the same freq, either. One card is plenty. Just keep updating your log if you keep one.

Speaking of logs, and QSLs, there is a prog you might be interested in at my site. It is freeware, so ignore the old registration begs. As is, no refund, cause it is free. No support either unless you catch me in a good mood HI.

What's your freq? I got pretty bad ears down here, (end fed wire between two buildings) but I'll try to give you a listen.

The QRZ cd has several CW decoder programs on it. I believe they are also available at the web site www.qrz.com. Some work with the sound card, some with the rs232 port and one with the parallel port. I have tried several and have yet to find one that does as good as the old brain. Yes they can certainly go faster but when the going gets rough, QRN or QRM, they give gibberish. Its amazing what a good filter the brain is. On good sigs they work great however and I have found that it's great practice to watch the screen and listen to the code at speeds above what you can copy. Before long when the screen fades you are surprised to find you are copying in your head without realizing it.

Here's a site where I found a lot of direct dwnloads as well as links to other
sites with progs for soundcard:

http://www.muenster.de/~welp/sb.htm

There is BTL for RTTy and a couple of CW progs... I downloaded DSPCW and also
SBPMORSE, a freeware program. There is stuff for SSTV and FAX too, as well as
DTMF, freq/spectrum/sig generator type programs. Worth a look.

2853. Does CW Tone Make a Difference in Learning CW?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-21 00:00:00 UTC
From: wd1v@amsat.org
Message-ID: <wd1v-2105980639570001@wd1v.mv.com>
Source record: 171776

Hi Folks:

A good friend of mine just passed his written EXTRA and is now studying for the CW portion of his upgrade. In chatting about different studying methods, I remembered the old trick of mentally sending the code of various signs you see while driving a car or perhaps even making the tones via whistling or humming.

It then dawned on me that when I do that, there is a specific frequency tone that I imagine in my mind for that code. And then I wondered if THAT frequency was the frequency that I should attempt to listen to ALL code in because it was the "operating frequency" that my mind heard in naturally?

I know that the degree of difficulty can vary as a function of tone if its changing (drifting or wandering). But are we perhaps self-resonant and impede our copying ability when we listen to CW away from our own "natural" frequency?

If this is true and a student weren't aware of it, they could become more frustrated or fatigued by listening outside of their natural passband.

I'd be interested in all comments or pointers to scientific references on this subject.

A data point for those folks wondering if the lower bands
really still work...

1100z 21 May 1998 10.109 MHz NF3I/QRP/M on Interstate 95,
Beltsville, MD, to ZL2UW, New Zealand. 579/559 reports.

Radio - IC-706 cranked down to 2.5 watts.
Antenna - TJ BB3 Screwdriver adjusted for 30m.

ZL2UW was the ONLY signal I could hear on the band. He
worked a few W7s before I got through.

Have fun!

Doesn't matter what you tell them, they're going to do as they please because they realize there are no consequences for their actions. They know they're on a ham band. They don't care. They laugh among themselves and ask "what is he going to do about it?" The answer, of course, is nothing.

Another fruitless exercise. Your elected representatives could care less about ham radio. The politicians only care about how many votes they can buy. Unless you can make a case that eliminating bootleggers would be good "for our children", you haven't got a chance.

1. Go purchase CODEQUICK (www.codequick.com)
2. Go purchase CodeMaster software

About a $50-60 investment - you'll master the code in NO TIME.

Once you get the letters/numbers down good, get on the air and make lots of contacts. Gaining speed is just a matter of time, and comes almost accidentally:
"Oh look, I'm pumping 15wpm!"

3. Grab your favorite novel, and send (off the air) 1-2 full pages every night, no matter how you feel.

4. Setup CodeMaster for a 600hz tone (I think that's standard?), and listen to a speed slightly faster than you're comfortable with. Try to copy every word you can.

5. Getting on the air for an hour or so at night "tricks" you into cramming code for MUCH longer than you normally would have the patience for. It's loads of fun.

6. With enthusiasm and some sweat, your subconscious picks up the "sounds", and will instantly recognize the letters. Increasing your speed is simple from that point.

7. As with all languages, you have a "breaking point". It's hard, that's too fast, slow down.... and one day -> POP! You're jotting down 13/20wpm code while watching TV.

8. As per scientific evidence of tones/etc, I believe learning code is the process of cramming into your subconscious so that recognition becomes instantaneous, rather than a conscious chore.
The Natural tone of the code, whatever, should play little or no role in this procedure.

Is WLO still sending out the bcst fodder? I used them to get my mill
copy up to snuff. Lately, I had thought they were gone digital, although
I still hear one or two CW channels with their call tape.

I had tried several commercial sitor terminals and basically had not much
luck, except on wlo or wcc. It seems that copy is always fine on good
clear signals but gibberish on weak signals or stuff in the QRM/QRN.
What I was hoping was that the technology/software had progress significantly
in the past 10 years.

> http://www.accessone.com/~tmayhan/

OK, I will check that out.

The HC interface also works with a lot of SSTV and FAX programs, as well as
> other RTTY and CW software.

My only reason for its use is CW copy for others to watch at demos and
the like.

> article starts on 22.24 in the 98 Handbook.

OK, I will look that over, too. That sounds like one of the rtty decoders
modified for CW use.

My main concern is about the software and its ability to ``copy''.
What I have seen up through about 10 years back was basically good
for solid WLO/WCC runs and not much good for anything else. I was
really hoping that the software had progressed, along with the technology
of sound cards, etc., to make it more workable. Some of that has to do
with the interface, and a lot of that has to do with the algorithms used
to do the decoding.

> without realizing it.

I will check them out.

My main concern is with the ``copy'' ability of the software. A lot is
required to make executive decisions in the copy by machine, that the ol'
grey matters takes in stride. What I have used up through about 10 years
back, including some commercial terminals, and some ham stuff, basically
only would do things like the WLO/WCC bcsts and little else, reliably,
unless you had a clear channel and the QRN was nil. I was so hoping that
things had progressed a little since then with better interfaces and better
software. I am not worried about how fast it copies, but more about how
reliably it copies. Reliability is always the most important thing in any
copy. Neat trick with the screen copy to higher code speeds. I may have
to think about that some..... my bug and keyboard and headcopy begins to
fade at 45mph, and I wish like hell I could break that magic 50mph limit
before I go belly up with the daisies.

> that my mind heard in naturally?

IMHO, you find a resonant frequency for code that suits your particular hearing. For example, my midrange hearing is a little weak, so I don't like 800hz-1200hz, typical of many CW signals that folks seem to like. Rather, I prefer down around 300-400hz to as low as 100hz for my hearing.

> I know that the degree of difficulty can vary as a function of
> tone if its changing (drifting or wandering). But are we perhaps
> self-resonant and impede our copying ability when we listen to
> CW away from our own "natural" frequency?

IMHO, you should use what frequency you have the most ``comfortable'' reception. Modern receivers do not allow you to play much with that and tend to like 700-1000hz as ``default whether you like it or not''. Older receivers with adjustable bfo offsets give you much more control.

A good operator can use the tones to his advantage, and can easily ferret out a desired signal, if there are two or more in the same passband with separations as little as 100hz. He keys in on the tone of choice and reads that information stream. Some folks with hearing problems have a more difficult time of that. Many folks that have not learned HOW to listen, or what to listen for, have a difficult time of that. It is training your ear, just like with music that counts. But, you have to be able to hear it, first. Pick tonal ranges where you can hear best, and use those mostly.

> If this is true and a student weren't aware of it, they could
> become more frustrated or fatigued by listening outside of their
> natural passband.

Yes. This is a considerable problem on many modern receivers that are optimized for a normal tonal range on CW.

Well Thomas here is the bottom line, I'll QSL anyone who sends me a card. The real question is, do YOU want his QSL?
If your county hunting, WAS, etc then you probably want his. For stateside contacts I like to state on the card, please QSL I need your state/county for an award or other. I think most hams will reply when they think you are genuinly interested in getting their card. During a county hunters contest or State QSO party your contacts are signal report and serial number anyway so the lenght of the QSO doesn't have much to do with whether or not you should QSL. QSLing has somewhat tapered off in recent years, mainly due to the cost I think. If you work a state QRP and really want the card sending an sase is a great way to insure getting a reply but in most cases not required. Good luck.

If you are studying to upgrade and will be taking a Morse Code exam element,
you should be practicing at the tone used on the exam. I believe the ARRL tapes
and exams are at 700 Hz.

Otherwise, practice at the tone you use for your CW offset. Actually, decide what tone you like best and adjust your TX offset accordingly. Most modern rigs can be so adjusted. My TS-50 uses a menu to adjust the offset. Also, adjust your sidetone frequency to match your offset. That way you can tune so that the recieved tone and your sidetone have the same audio freq, and your TX freq will then be within a few Hz of the other station. If your rig is a homebrew transciever you can replace the TX offset cap in your VFO with a small trimmer for adjustment. Ideally, you and the other station transmit on the exact same frequency unless split operation is desired for some reason. The simple way to do that on the fly is to match freq between sidetone and RX tone.

I think FRS requires a mail-in no-test license and you may only communicate
with family members. GMRS is license-free.

I think maybe CB HTs would be the way for these guys to go. 4 watts instead of
100 mw. An injured hang-glider might be able to call for outside help over CB.
He would have some of the advantages of 2M and none of the limitations of GMRS.

Meanwhile, maybe you could buzz these guys with a RC model airplane towing a
mini-advertising banner "Don't be a criminal... stay off 2 meters or we will
open fire on the next pass" (notice to a certain anti-gun troll... that was a
joke)

Freq? Well, um, the rig supposedly can tune 10.105 to 10.120, and I try to stick to the middle of the range, but having no calibrated receiver anywhere nor a frequency counter with which to calibrate the VXO dial, I can never tell exactly where I am in that range. I tend (if you can call two contacts a "tendency") to listen for where folks are ragchewing and either answer a CQ or find a quiet spot neither "too close" nor "too far" from that cluster to do a CQ myself.

As for bad ears, well, I'm guessing that if I can make a 1499 mile contact to PA, I can hit your station over in TX. Hope to work you sometime. 73,

Looking for a rear swivel plate for a SABER. This is the long metal piece that attaches to the rear of the radio and has the button for the belt swivel attachment.

I need it for a System SABER with the extra-long case (for the encyrption module).

Check those junk drawers!

2886. Email Based Callsign Server UPD

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-21 00:00:00 UTC
From: Fly65@my-dejanews.com
Message-ID: <6k21c8jm1@nnrp1.dejanews.com>
Source record: 171809

This is an update to my experimental callsign server.
To look up a callsign, enter a message to qrz@mibbs.xg.com
Subject field doesn't matter. Body of message starting with first line should be the call(s) you want to look up separated with a space. Look up as many as you want. Ex:
ka8xxx kb8xxx n8xxx kc8xxx wa8xxx and so on.
To look up a name follow directions above except starting with first line of message should be as follows:
n doe john n simmoms jack n jones michael n watson mary n smith jeremy and so on. So it's n (for name) then the last name then first name, always put the "n" before each name just as shown above. Still haven't got the latest callsigns yet (Apr.97) Thanks..

Actually, this isn't as far-fetched as it first appears. One of Marge's sisters is a ham. In one episode she is seen using a radio she has set up at home and someone makes a comment about it being ham radio. I can't remember what else happened in the episode, but it was one that seemed to focus on the sisters and most likely when one of them is dating someone.

The rig was not identifiable. On the other hand, this has the advantage of no weird stuff happening, like someone talking into an oscilliscope or trying to send CW with an S38 receiver.

>

For what it's worth, almost every salary survey done for the past ten years has shown that Federal employees' pay is 20 to 30 percent BELOW comparable private sector pay. I also doubt your statement that compliance clerks make $85,000 per year. Only office managers and agency heads make that kind of money.

The big problem is we have had years of administrations and congresses intent on cutting money spent on regulations and enforcing regulations. Like it or not, this is where the problem is, not at the FCC. The FCC can do only what it's been funded to do by the Congress.

Along these lines, what about the Brady Bill come November ..?

Email yopur people on the hill and ask them tom support HR 2721

> Jim Aeschliman bb840@scn.org
> Black Diamond, Washington KD7MK

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

I wonder if they were doing software testing with the Year 2000 issues,
or even a software update (if that is possible).

I don't believe the newspapers al all. The computer and international
tech community is very concerned about the implications. Our good and
efficient Government has stated that MOST of the agencies will not be
Y2K compliant until after 2003. THIS INCLUDES THE War Department (Ooops.
the DOD) that controls the nuke population. BTW. Did you know that
Russia's ICBM software is pirated US stuff? We will be sending them
corrections/updates just in case one or two launches on New Years 2000.

Hhhhhmmmmmmmm.

It will be interesting to find out what the investigation reveals. Because there was apparently a backup to the attitude control computer, it seems unlikely that physical component failure caused the incident.

Compared to Navy operations, commercial satellites operate under extremely lax security. I have also heard that companies tend to cover up incidents of security breaches. Who knows how many people might have had the access and ability to send unauthorized transmissions to the control system.

The kid killed his parents and then stole a rifle from them to kill
the students.

I just heard that he had a history of killing animals ... if so, why
was he still in school in the first place?

Burt has no guts to post his drivel on an appropriate news group
where he knows that he will be torn to shreds. There are plenty of
hams over at TPG for him to vent on. It is he that is the wimp and
without guts. I invited him over the last time he posted his rant and
I see that he hasn't had the balls to show up.

I'm a ham in Oregon. I DIDN'T APPROVE OF ANYTHING to do with shooting anyone. Thank you Butt Fisher for your kind, accurate portraying of how we here in Oregon feel about this tragedy. It's so nice to know you are interested and well versed in how we think. You know, there could easily be someone on one of these list that did know a person or the family of a person injured or killed by that kid in Springfield. But then, you are only doing your part to clean up the world, aren't you. Nice to know you care so...

I have seen commercial pagers around work that operate in the 151 MHz region already. You might have an easier time trying to modify one of these. Also, it is not crystal controlled, nor is it in the Ham band, but I have an FM broadcast receiver that fits in my ear. It is basically similar to a hearing aid, but gets FM instead of amplifying the surrounding area. I have wondered if one of these could be modified to get the ham bands.

Good luck,
Ed

My hat goes off to the kid who took a 22 in the chest and instead of freaking out, an understandable reaction, took the shooter down and disarmed him.

The focus should perhaps be a little less on the parents, the local law envorcement agencies who released the kid so he could perform his vile attack, the warped kid himself, or the Burts of the world who point to this and similar episodes and claim that keeping honest people disarmed willl make the world a better and safer place. The spotlight should be on the heroism of the kid who by his selfless action probably saved lives. Let's forget about Burt for a day or two and pray for that kid, and ask ourselves if we have what it takes to act in a similar fashion.

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

WANT TO BECOME A RADIO AMATEUR?

Well, if you do and live in 'travelling distance' of Bury, why not take advantage of the excellent Tuition offered by Members of Bury Radio Society? The Society has just completed a Course of Instruction leading to the Radio Amateurs Examination held in May 1998.

Bury Radio Society proposes to run a similar Course commencing in September 1998, with Classes at the Mosses Centre on Tuesday Evenings, leading to the Radio Amateurs Examination in May 1999. If you are interested, send a Stamped Self Addressed Envelope marked "RAE 1999" to Mike Bainbridge, Secretary, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB no later than the End of June 1998 to reserve a Place on this Course.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, where it has its own Rooms, from 7.45 pm onwards and Visitors and Prospective Members of all Ages will be made most welcome.

There is a Large Public Car Park adjacent to the Mosses Centre which is on the opposite side of the Dual Carriageway (Angouleme Way) to the Open Market in the Town Centre of Bury, not far from the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway. The Centre is fairly accessible to the Disabled. There is a very comfortable Lounge Area with a Licenced Bar which has both Soft and Alcoholic Drinks at reasonable Prices. Please ring 0161 761 2079 during Office Hours for Directions to the Centre.

IN THIS EDITION:

* +1998 Dayton Hamvention a hit
* +Haller to PMRS: Look elsewhere for spectrum
* +ARRL requests special event call sign rules changes
* +FCC assures hams at Dayton
* +WB8BGY is new Great Lakes Vice Director
* Germany authorizes ham radio "learner's permit" stations
* ICOM America Funmobile to visit ARRL HQ
* Solar update
* IN BRIEF: This weekend on the radio;
McGan Award deadline is here! Miles Mann,
WF1F, out of MIREX; ARES Web site classifieds;
Weather spotter training PR plus in NC; Tennessee
club sponsors storm-spotter class; SAREX at science
teachers' confab; ICOM donates station to South
Africa; Tandy CEO to retire; Premier acquires
Aria Industrial; Larsen acquires Hytennas

+Available on ARRL Audio News

1998 DAYTON HAMVENTION A HIT

Three days of fair weather and a largely enthusiastic crowd highlighted the 1998 Dayton Hamvention. By most accounts, attendance was, at best, no better than last year's, but the jury's still out on whether the crowd was in a buying mood. It depends on whom you ask. According to Chris Lougee, N7TJM, of ICOM, buying was up this year. "The biggest change [from last year] was the interest in new HF products," he said. Weather was in the mid-80s for the first couple of days of Hamvention, and it was on the humid side as well. Lougee thinks that might have held down the amount of traffic inside Hara Arena.

Also on the optimistic side was Alinco's Doug Wynn, KB6YZD. "It was the best Dayton Hamvention ever for Alinco," Wynn said. Alinco introduced its DJ-C5T

dual-band "credit card" radio at Dayton. Wynn called it "a big hit" and said "hundreds and hundred of them were sold."

Kenwood's Paul Middleton, KD6NUH, felt sales in general were down. "Fewer boxes were seen in the hands of customers," he said. Middleton said Kenwood's "Easter Island QSL" picture booth, featuring Kenwood's new hand-held VC-H1 Visual Communicator SSTV system, "remained very popular throughout the event." The company's classroom sessions to introduce visitors to its new products also were "booked solid," he said.

Most observers felt the Sunday crowd was down substantially. By then, the weather was somewhat cooler and a lot less humid. At week's end, manufacturers still were tallying sales data from retail outlets to see if the hard numbers match up with their perceptions of the show. Dayton Hamvention officials have not released an official head count.

While there was no "killer" product debut this year to compare with last year's Kachina 505DSP transceiver, Yaesu may have trumped ICOM's popular IC-706 with its new FT-100 "Field Commander" transceiver. While not expected to be available until late summer or early fall, the FT-100 covers all amateur bands and modes from 160 meters through 70 cm, with the exception of 222 MHz--all inside a box that's slightly smaller than the '706. It includes a detachable front panel, CW keyer, DSP features, and slots for optional filters. Like the competing '706, the FT-100 will not operate full duplex for satellite work.

To sort of even things out, ICOM reported a lot of interest in its new IC-Q7A mini H-T, intended to compete with the VX-1R that Yaesu debuted at Dayton last year. The IC-Q7A offers wideband receive capability, from 30 to 1300 MHz in a very small package.

Several small HF transceivers priced well below the $1000 mark also turned up at Dayton this year. One, the EleCraft K2, will be a kit. Noted QRPer Wayne Burdick, N6KR, of Wilderness Radio and NorCal renown, is one of the rig's designers. It's expected to be on the market by fall. SGC's long-awaited SG-2020 HF compact transceiver also was on display at Dayton. The unit has recently become available from dealers. Patcomm's new PC-9000 also was on display, although it's not yet available. The new, compact 40-W box will cover 160 through 6 meters. Premier/ADI also plans to market an economy priced HF transceiver under the Pryme label. (ADI also had new 6 meter and 1-1/4 meter hand-helds.)

Ameritron had its new "true legal limit" antenna tuner, the ATR-30, on display at Dayton, plus a new precision SWR/wattmeter, the AWM-30.

Also popular were computer-operated "black box" receivers. Following on the heels of ICOM's successful PCR1000 which debuted last year, Ten-Tec will offer its own "black box" radio, the RX-320. Ten-Tec also debuted its new Titan II (Model 416) linear amp, a single-tube design that provides full legal limit and has a self-contained power supply.

Antennas were everywhere, including a new trapless tribander from Bencher, the Skyhawk. Timewave and Kantronics were among those offering new multimode

data controllers. Kantronics President Phil Anderson, W0XI, said the new KAM '98 TNC was well received. "I think it's safe to say that digital is making a huge comeback." he said.

But vendor Walter Spieth, DK9SQ, of Ebersbach, Germany hit one clean into left field with his telescoping fiberglass antenna poles. Spieth and his entourage, decked out in traditional Bavarian costume for their first-ever Dayton appearance, sold out of the 33-foot long lightweight masts that are designed for temporary or portable antenna use. While at Dayton, he also made arrangements for US dealers to handle the product.

HALLER TO PMRS: LOOK ELSEWHERE FOR SPECTRUM

Former FCC Private Radio Bureau chief turned communications consultant Ralph Haller says he supports the goals of the petition--now designated RM-9267--recently filed by the Land Mobile Communications Council. But Haller, who's N4RH, also believes that the Private Mobile Radio Service ought to look somewhere other than the 70 cm band to satisfy its immediate spectrum needs. "If I had my druthers, I would not go after amateur spectrum, I would go after federal spectrum," he said, adding that he recently bought a dual-band mobile transceiver.

The LMCC has requested that the FCC immediately reallocate 420 to 430 MHz and 440 to 450 MHz segments from the federal government to the PMRS. Amateur Radio enjoys secondary status on the band. Haller said there's plenty of spectrum between 225 and 400 MHz that--to his way of thinking at least--is "not being used efficiently by the federal government."

Haller--whose clients include two LMCC members--said his quoted remarks in a recent issue of Wireless Week had "nothing to do with ham radio" and failed to reflect his full views on the issue. He said he raised some of his concerns about the direction of the LMCC petition before it was filed but was not in a position to do anything about it. But he emphasized that he supports its general aims.

"I certainly support the goals of the LMCC petition, but I would recommend that they look to other spectrum to satisfy that need," he said.

Haller said the LMCC petition represents "a serious issue for the amateur community." While he was at the FCC, Haller got a chance to see similar circumstances firsthand during the fight for 220 MHz. "The toughest decisions for the FCC are spectrum decisions," he said. The ham community needs to convince the FCC that Amateur Radio is making "the highest and best use of this band."

Haller said that from the FCC's perspective, the 220 MHz fight "was not a pretty sight." He said hams take challenges to their bands personally. "It's quite a different sort of fight," he said. "It's like taking away part of their lives." While hams lost the 220 MHz fight, Haller said the Amateur Radio community demonstrated a real ability to muster support for its side.

ARRL REQUESTS SPECIAL EVENT CALL SIGN RULES CHANGES

The ARRL has petitioned the FCC for changes in the administration of the special event call sign program. The League wants the FCC to amend its rules to permit the use of additional special event call sign formats to complement the current one-by-one (1x1) format now authorized.

The petition also asks the Commission to include call signs denoting US territories and possessions having no mailing address within the special event program. Use of those call signs would be limited to locations corresponding to and denoted by the call sign.

The special event call sign program is administered by several private sector coordinators, including the ARRL. Those wanting a special event call sign for a limited period are able to reserve one via the Internet. Under current rules, 750 combinations of 1x1 format call signs are available for limited periods. Stations operating with special event call signs still must identify with the station's regularly assigned call sign at one-hour intervals.

According to the petition, demand for special event call signs has been low. In the first seven months of the program, only 237 call sign reservations had been coordinated. But, the League says, there has been significant demand for special event call signs outside of the 1x1 format and for DXpeditions to locations under US jurisdiction which do not have US Postal Service mailing addresses. The League also says there's "a great deal of interest" in additional special event call sign formats that would let the call sign symbolize a particular event or type of event.

The petition requests that the FCC make available to the special event call sign program several additional call sign blocks not currently used for amateur primary station identification. Specifically, the League wants the Commission to include 1x1 call signs with a letter X suffix as well as 1xx1, Nxx2, and 1xx3 formats, as part of the special event program. The use of the Nxx2 format avoids conflicts with TV translator call sign assignments, which start with K or W.

The ARRL also asked that call signs appropriate to US territories and possessions such as Desecheo Island near Puerto Rico or Kingman Reef in the Pacific be made available to DXpeditions for limited periods.

The League's petition says the proposed changes would "permit significantly increased flexibility in private sector special event call sign administration without any adverse impact."

A comment period will be announced when the FCC assigns an RM number to the League's petition.

FCC ASSURES AMATEUR COMMUNITY AT DAYTON

The FCC had words of assurance for hams at the Dayton Hamvention. "We won't be taking any privileges away from anybody," said the FCC's Bill Cross, W3TN, of the Wireless Telecommunications Bureau. Speaking at the Hamvention's FCC Forum May 17, Cross explained that the FCC is reviewing all Amateur Radio rules and regulations as part of its required biennial review and wants to hear from hams. But he said that whatever changes come about,

if any, hams should not fear another "incentive licensing" debacle or loss of privileges they now have.

Cross said the Commission welcomes comments and suggestions from the Amateur Radio community on "global" issues involving ham radio, including licensing structure and Morse code testing. Comments may be sent via e-mail to hamcomm@fcc.gov or via snail mail to FCC, 1919 M St NW, Washington, DC 20554. "Please run these through your PC's spell checker," he advised the crowd of 75 to 100 on hand. Cross said he anticipates the mailbox will be available "indefinitely" for comments from the Amateur Radio community.

Cross also welcomed comments on petitions before the Commission and suggested copies to the ARRL where League petitions were involved. Cross said the FCC already has received many comments on--but none in support of--RM-9259. That's the League's request for a declaratory ruling affirming that amateur operation that conflicts with established voluntary band plans and causes interference or adversely affects those operating in accordance with applicable band plans would be contrary to "good amateur practice." That petition was the subject of a debate in another forum at the same hour Cross spoke.

During his remarks, Cross covered a wide range of topics, from vanity call signs and the biennial rules review to the Telecommunications Act of 1996 and the soon-to-be-implemented Universal Licensing System. He also joked about how many hams view the FCC. "People have the view that there are two parts to the Commission," he said. "There's ham radio and then there's everything else." The reality is that there are four new Commissioners at the FCC and none is a ham. Cross described the goals of the new FCC Chairman, William Kennard, as "community, competition, and common sense."

Cross said that the vanity call sign fee that goes into effect later this year could differ from the $12.90 the FCC proposed earlier this year, but he didn't offer any specifics. The FCC has issued more than 21,000 vanity call signs since the latest incarnation of the vanity program in 1996--14,000 of them in the past year. "We are still getting 500 to 1000 applications per month," he said, adding that 80% of the applications now are filed electronically via the Internet.

WB8BGY APPOINTED GREAT LAKES VICE DIRECTOR

ARRL President Rod Stafford, W6ROD, has appointed George Race, WB8BGY, of Albion, Michigan, as Vice Director of the Great Lakes Division. The appointment became effective May 19.

Race, the Great Lakes Division director from 1995 until 1998, lost an re-election bid last November to Joe Falcone, N8TI, a Livonia, Michigan, attorney. When Falcone resigned last March, Vice Director Dave Coons, WT8W, moved into the director's slot. The vice director's position has been vacant since then.

Race, 62, previously served as Great Lakes vice director from 1990 to 1995. He became the Great Lakes director in June 1995, when he took over for the ailing Allan Severson, AB8P, now a silent key. Race was elected Great Lakes

director in 1996.

Members may contact Race via e-mail to wb8bgy@arrl.org.

GERMANY AUTHORIZES HAM RADIO "LEARNER'S PERMIT" STATIONS

A new program in Germany has established the equivalent of a learner's permit in an effort to make ham radio more attractive to newcomers. Under the training program, amateurs in Germany may apply for a special instructional license that permits them to set up a station to be used by aspiring hams.

The Deutscher Amateur Radio Club (DARC) proposed the plan--which is similar to one used for many years in the former East Germany--to the licensing authority, the Bundesamt fuer Post und Telekommunikation (BAPT). Those using the instructional station would have the operating privileges of the instructor holding the license.

During a visit to ARRL Headquarters in May, DARC International Liaison Officer Hans Berg, DJ6TJ, said the goal was to have a program to attract people into ham radio and give them a chance to try it while preparing for the licensing examination. "This way, you have a chance to get people to your station to show them how ham radio works," he said. The instructor would be responsible for making sure the station was operated according to the rules, but, Berg says, the rules do not specify that the operator has to actually be present when the station is being operated. There also are no age restrictions on those who operate an instructional station.

Instructional stations would have distinctive call signs, with DN prefixes. Wolfgang Manz, DJ3EO, who heads the DARC's Youth and Education Committee, says a few DN call signs have been issued. "Unfortunately, some amateurs broke off contact because they regarded the instructional station to be illegal," he said.

Berg concedes that some might abuse the program, but he's optimistic that it will lead to Amateur Radio growth in Germany. "It worked pretty well for generations" in the former East Germany, where it was the only way for people to get into ham radio, he said. Berg expects the program to be expanded to Austria and Switzerland within a year, and, eventually, it could be adopted throughout Europe.

Germany also has added what Manz calls "a sort of Novice license." It gives privileges on 2 meters and 70 cm with power under 10 W EIRP. Call signs will begin with DO.

ICOM AMERICA FUNMOBILE TO VISIT ARRL HQ

If you missed the brightly decorated ICOM Funmobile at the Dayton Hamvention, you might want to stop by and see it on one of its other stops around the US and Canada. The Funmobile--actually a 30-foot motor home--carries a complement of operational ICOM Amateur Radio equipment, will visit ARRL Headquarters in Newington, Connecticut, on June 3 from noon until 3 PM. It will then visit Lentini Communications in Newington.

ICOM has posted additional information on the Funmobile--including scheduled visits and some interior photographs of the equipment--on its Web site at http://www.icomamerica.com/ontheroad/.

SOLAR UPDATE

Solar savant Tad Cook, K7VVV, Seattle, Washington, reports: First thing to report this week is that geomagnetic or space weather conditions probably had nothing to do with the failure of the Galaxy 4 satellite.

Geomagnetic indices have settled over the last two weeks. Solar flux and sunspot numbers have also been generally down, but last week the average sunspot number was up about ten points while the average solar flux was off almost six points.

Until the end of the month the solar flux should rise, past 120 by May 25, and then up to 128 around May 29 and 30. Solar flux should drop down below 120 around June 2 or 3, below 110 around June 6, and below 100 after June 13. Look for unsettled conditions around May 23, and May 30 through June 2. Stable conditions are forecast around June 11 and 12.

Twenty meters is still the best HF band for DX, with daily worldwide openings. The South Pacific is strong into Seattle on that band late into the night. The ionosphere thins as the days lengthen, which means that Maximum Usable Frequency (MUF) during the daylight hours will gradually lower.

On the VHF front, W1LP in Massachusetts reported good 6 meter openings into W3, W4, W0, and New Brunswick on 2 meters into Cuba around a week ago. W1JJM reported EA7 and CT3 signals on 6 meters into Rhode Island on May 14, along with more contacts from the Northeast into the Southeast and the Caribbean on 2 meters. A 432 MHz Delaware to Florida QSO also was reported.

Sunspot numbers for May 7 through 13 were 82, 81, 56, 61, 72, 90, and 90 with a mean of 76. 10.7 cm flux was 123.3, 118, 110.7, 107.2, 108, 112.1, and 116.6, with a mean of 113.7. The estimated planetary A indices were 13, 20, 12, 11, 13, 19, and 6, with a mean of 13.4.

Sunspot numbers for May 14 through 20 were 94, 101, 92, 89, 92, 77 and 58 with a mean of 86.1. The 10.7 cm flux was 117.2, 116, 117.7, 110, 102.2, 99.7, and 91.9, with a mean of 107.8. The estimated planetary A indices were 5, 8, 12, 9, 11, 8, and 9, with a mean of 8.9.

IN BRIEF:

* This weekend on the radio: The ARCI QRP Hoot Owl Sprint (CW), the Texas QSO Party, and the Memorial Day CW Sprint are on for this weekend. See May QST, page 96, for details. Just ahead: The CQ WW WPX Contest (CW) is the weekend of May 30-31. See March QST, page 101 for details.

* McGan Award deadline is here! If you know someone who has achieved outstanding success in publicizing Amateur Radio in the local media and community, the Philip J. McGan Memorial Antenna Award is the perfect way to

say thank you on behalf of Amateur Radio. The deadline for this year's nomination is Friday, May 29 at 5 PM Eastern Time. For more information on the award, see February QST, page 47.

* Miles Mann, WF1F, out of MIREX: MIREX President Dave Larsen, N6CO, has announced that Miles Mann, WF1F, no longer is a part of MIREX. Mann, who had served as educational coordinator for the group, expressed shock at the announcement but offered no public comment. MIREX conducts experimental and educational activities involving the Russian Mir space station.

* ARES Web site classifieds: The National ARES Web page (sponsored by ARES of Southeast Louisiana Inc) now offers a free classifieds page for hams looking to buy, sell, or trade Amateur Radio gear. It's at http://www.ares.org/classified/classified.htm. This is a free service.--thanks to Newsline

* Weather spotter training a PR plus in NC: Bill Boyes, KB1G, Triad SKYWARN EC (Greensboro/ Winston-Salem/High Point, North Carolina), reports ham radio got great publicity from a weather-spotter training class on April 23 in Rockingham, North Carolina. Boyes said one TV station "did a great piece, including a major plug for the Amateur Radio end of SKYWARN." Boyes says the station's reporter prominently mentioned hams and pointed out that it was a ham who first spotted a recent tornado in Mayodan. Of the 155 people attending the spotter training, about two-thirds were nonhams who received an excellent introduction to the hobby and its public service aspects.--Gary Pearce, KN4AQ

* Tennessee club sponsors storm-spotter class: The West Tennessee Amateur Radio Society in Jackson, Tennessee, took advantage of its storm-spotter class May 7 to recruit SKYWARN volunteers. John White, a National Weather Service meteorologist, gave tips on storm spotting and weather safety to a group of about 50 people at the club-sponsored session. The area's SKYWARN network includes some 2500 members in four states. Tennessee has been pounded by severe weather in recent weeks, including a tornado in Nashville and hail that hit two counties in late April.--thanks to Rickey Brown, KE4CES

* SAREX at science teachers' confab: The Space Amateur Radio EXperiment--SAREX--program had a presence in the NASA booth at the recent National Science Teachers Association convention in Las Vegas. ARRL Educational Activities Coordinator Dan Miller, K3UFG, was on hand to help explain the value of ham radio as an educational tool to the approximately 18,500 attendees. Ably assisting were Ken and Linda Chaffee, WA1QXR and N1XHT, respectively. Ken is a retired teacher and active AMSAT enthusiast. Also pitching in were ARRL Southwestern Division Director Fried Heyn, WA6WZO, and his wife, Sandi, WA6WZN. Miller says he came away from the convention with a feeling that the exhibit had helped make more teachers and administrators aware of ham radio's classroom potential.--Dan Miller, K3UFG

* ICOM donates station to South Africa: ICOM has donated an IC-706MkII transceiver and an AH-4 automatic antenna tuner that will be used to establish a club station for South African youth as part of a government

initiative to interest young people in technical activities and careers. The transceiver was on display at the IARU booth during the ITU-sponsored Africa Telecom 98 in Johannesburg.

* Tandy CEO to retire: From Ft Worth Texas comes word that Tandy Corporation Chief Executive Officer John Roach will retire at the end of this year. It was under Roach's tenure that ham radio gear was introduced into the Radio Shack line of products. Tandy President Leonard Roberts will succeed Roach as CEO on January 1.--thanks to Newsline and Radio Shack

* Premier acquires Aria Industrial: Premier Communications, which manufactures ADI brand amateur gear, has announced that it has acquired battery-pack manufacturer Aria Industrial Corporation. Premier recently announced its own entry into the battery pack market with its Pryme Radio Products NiCd and NiMH batteries. Aria's offices have been relocated to Premier's facilities in Walnut, California.

* Larsen acquires Hytennas: Larsen Electronics Inc, a well-known manufacturer of amateur and commercial antennas, has announced the acquisition of Hytennas in Largo, Florida. Hytennas is a leading producer of portable molded and dipped antennas for the two-way military and manufacturing market. It will operate as a wholly-owned Larsen subsidiary. Larsen, based in Vancouver, Washington, manufactures and markets small antennas for amateur, two-way, SMR, cellular, PCS, data, GPS and OEM applications.--Larsen Electronics

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted

as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

2912. HAM Gear For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-22 00:00:00 UTC

Hi

I have 4 Items for sale. I originally had these items posted as for pickup in the MD area. I changed my mind and am willing to ship these items.

Note: The price for the 830 does not include shipping. I am not sure how much it will cost to ship the 830 but if anybody is interested, I can find out

Here are the items I have left:

Kenwood TS-830S HF Transceiver with Shure Desk Microphone- $500
Ameco Preamplifier for HF through 6 Meters- $75
Kantronics VHF1-60 2 Meter Amplifier- $150
MFJ-1276 TNC- $75

For more information, EMAIL me at keithc@mail.com or call me at (410) 682-3594. If you are in the MD area, I can demonstrate the 830 or anything else to show you that it works.

Thanks,

Keith Calligan

Which begs the question: why do you no longer post your e-mail address? You used to. My guess is that it's because you wish to post trash on the newsgroup but yet do not want to be "bothered" by people e-mailing and telling you to knock off the nonsense.

Here, let me post it for you: ï¿½abctyping@mindspring.com

2917. ARLB037 Rule request clarification

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-22 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb037.1998@arrl.org>
Source record: 171637
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB037
ARLB037 Rule request clarification

ZCZC AG37
QST de W1AW
ARRL Bulletin 37 ARLB037
From ARRL Headquarters
Newington CT May 22, 1998
To all radio amateurs

SB QST ARL ARLB037
ARLB037 Rule request clarification

The ARRL says its recent request seeking an FCC declaratory ruling affirming the value of band plans has been mishandled by the FCC and misunderstood by the amateur community. In comments on RM-9259 filed with the FCC, the ARRL says it never intended to propose any changes to the amateur rules, and its request should not have been treated as a rulemaking petition.

The ARRL said it does not dictate how bandplans are developed and was not asking to make specific bandplans mandatory or to accommodate certain uses to the exclusion of others. ''Exactly the opposite is intended,'' the League's comments declared. ''Voluntary bandplans should be voluntary, and adherence to them should remain voluntary.''

The League said its only goal was to have the FCC interpret and clarify the scope of ''good amateur practice'' as the term is used in Part 97 of the Commission's rules. It wants the commission to affirm--as the then-Chief of the Private Radio Bureau did in 1983--that, ''given the widespread acceptance of band plans in the Amateur Service, operation not in harmony with those plans, which results in interference to other amateur uses, is not good amateur practice.''

The ARRL reiterated that voluntary bandplans that enjoy general acceptance and adherence among hams are ''indispensable'' and a keystone to self regulation.

The FCC's handling of the request as a rulemaking petition ''has caused confusion in the amateur community,'' the League said. ''This misunderstanding has led commenters to presume that to grant the request would provide absolute authority on the part of the League or to volunteer repeater coordinators'' to decide bandplans with the

force of rule, the League said. ''Not so,'' the League's filing said. ''Nothing gives voluntary band plans any more force or effect than is afforded by the amateur community that accepts, rejects, or modifies them.''

The ARRL's comments conclude by again asking the FCC to issue a declaratory ruling stating that '''good amateur practice' anticipates compliance with accepted, voluntary, international, national, and regional bandplans adopted by cooperation and coordination among individuals and licensees.''

A copy of the League's comments to the FCC is on the ARRLWeb page at http://www.arrl.org/announce/uls-cmt.pdf.

ZCZC AP21
QST de W1AW
Propagation Forecast Bulletin 21 ARLP021
From Tad Cook, K7VVV
Seattle, WA May 22, 1998
To all radio amateurs

SB PROP ARL ARLP021
ARLP021 Propagation de K7VVV

First thing to report this week is that geomagnetic or space weather conditions probably had nothing to do with the failure of the Galaxy 4 satellite.

Geomagnetic indices have settled over the last two weeks. Solar flux and sunspot numbers have also been generally down, but last week the average sunspot number was up about ten points while the average solar flux was off almost six points.

Until the end of the month the solar flux should rise, past 120 by May 25, and then up to 128 around May 29 and 30. Solar flux should drop down below 120 around June 2 or 3, below 110 around June 6, and below 100 after June 13. Look for unsettled conditions around May 23, and May 30 through June 2. Stable conditions are forecast around June 11 and 12.

20 meters is still the best HF band for DX, with daily worldwide openings. The South Pacific is strong into Seattle on that band late into the night. The ionosphere thins as the days lengthen, which means that Maximum Usable Frequency (MUF) during the daylight hours will gradually lower.

On the VHF front, W1LP from Massachusetts reported good 6 meter openings into W3, W4, W0, New Brunswick and Cuba around a week ago. W1JJM reported EA7 and CT3 signals on 6 meters into Rhode Island on May 14, along with more contacts from the Northeast into the Southeast and the Caribbean on 2 meters. W9JJ reported a 432 MHz Delaware to Florida QSO.

Sunspot Numbers for May 14 through 20 were 94, 101, 92, 89, 92, 77 and 58 with a mean of 86.1. 10.7 cm flux was 117.2, 116, 117.7, 110, 102.2, 99.7 and 91.9, with a mean of 107.8, and estimated planetary A indices were 5, 8, 12, 9, 11, 8, and 9, with a mean of

8.9.

Things I love about Memorial Day

1.Barbecue talk-in- saliva drips from the speaker
2.Ham volleyball-I feel the earth mobe under my feet
3.Radio club beach field trip-cover your eyes its a female
4.Female hams in bathing suits-boing boing boing
5.Tourists on 2 begging for directions-25 hams listening everyone waits for the other one to answer
6.Plaid short sleeve shirts-the fashion odyssey
7.Meet my ham family-6 geeks from Iowa
8.Ham warning about state police-once theyre sure the trooper won't hear them on the 5th harmonic
9.Ham kegs-what the rest of us think of as "cans"
10.Cool hams-driving convertable Corvettes with 4 vhf whips, phased screwdrivers for hf, phased cb antennas, cellphone,gps,am/fm,scanner and shortwave active antennas.

Holiday bonus

11.Ham softball- Heatsinks don't break like wooden bats

Hams support the Oregon shooting? Funny, I'm a ham, and a gun owner, but I don't recall showing support for it. Matter of fact, I think it's disgusting. To broadly label such thing against a GROUP is pretty hard to do and be able to back it up with facts.

My weapons are kept where I can get to them, but then I don't have kids to worry about. IN MOST CASES, parents ARE (SHOULD BE) responsible for the actions of their children. But, in this case if he killed them too, then you can't hold the parents other than for that which they may have failed to do PRIOR TO their own demise. Like the day before, when he took the gun to school and was thrown out, but hey, they may have been dead already too, at that time.

It is PEOPLE who kill, NOT THE GUNS. Just like when a drunk takes a car and kills. It isn't the car. Cars, guns, knives, baseball bats, bricks, pipes, etc. Any weapon of choice, does NOT have a mind nor a consciounce to make the choice.

But it is WRONG to say OPENLY that a GROUP supports such a thing. You are speaking for me as well by that statement, and I sir, NEVER support such a dastardly deed. Let me speak for myself, PLEASE.

Dear Burt,

You're un-believable. I do not understand how a person that professes to be a mentor and teacher of others, stoops so low as you. You have no idea of the bile and sourness that you exhibit. It has nothing whatsoever to do with bravery or cowardice. It is the blathering of a demented mind such as yours that create most if not all the problems in the world in which we live, amateur radio aside.

Your continued pointed baiting will one day do you in, not necessarily physically, as you seem to be so interested, but mentally. You will falter and eventually be a pitiful shell of a human being...and by then, you will wonder why no one has come to your aid as selective amnesia takes over your thoughts.

Your constant asking for physical attacks or threats of attacking others is not going to serve you well as you must know. We live in a time when people act impulsively at far less prodding than you have been providing. You should be learning a lesson from the reports you hear, not waving a red flag.

I'm sure you must be an honest man and do not really exhibit homosexual tendancies as some have suggested nor do I think you behave as some have posted about you and your sexual advances toward children. All those things people post about your personal life cannot be true and I refuse to believe them.

I think your continued baiting is a ploy though, because you post to many newsgroups and do not focus your energy in any area. I hope that you find true happiness one day soon and live a full and productive life without bitterness and hatred. You are a fellow amateur and human being and every person has a right to be a pain in the butt occasionally, but none of us should take advantage of that fact and make it a professional calling.

I wish you success and mental health for your future.

7 3 and I hope to work you on HF sometime.

K4OW

> ---
> Yeppers We NEED *MORE* guns *AND* easier access to them !!!

...And how many gun-related deaths in Switzerland, where fully
automatic weapons are kept as a matter of course? Or Israel, for that
matter?

More a matter of culture, I would think, though the easy availability
of weapons plays a factor.

A total ban on guns followed by mass confiscation won't solve the
problem. If simply making somthing illegal was the answer, we would have
no troubles with illicit narcotics.

And no, I have no answers. Sorry.

DUI...hmmm.... sounds to me as if we should ban alcohol. No alcohol, no drunks, no drunk drivers, no DUI deaths. Yes, ban alcohol.

Oh, wait. Wasn't that tried earlier this century? Anyone remember the outcome?

Lets see:

6 of them you have
for $50 each?

but all of them for $40

wow!

Sounds like volume discount in a non-linear equation

Greg

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

For more information and links to Your Congressmen and Senators please visit:

Marv,

Per the suggestion of a member of the Goodfellows....call the FCC again, tape it, send it to ur congressman/woman, the FCC chief, the ARRL. Anyone that is interested in how the government is spending our tax money.

Dan/W4NTI

I fail to see any connection between Amateur Radio and the pros and cons of gun ownership. Perhaps alt.talk.guns would be a good place to "shoot this one out"? ;-)

RCrusoe (rcrusoe@aol.com) wrote:
: I think maybe CB HTs would be the way for these guys to go. 4 watts
: instead of 100 mw. An injured hang-glider might be able to call for
: outside help over CB. He would have some of the advantages of 2M and
: none of the limitations of GMRS.

Around ten years ago in Santa Barbara, Calif. the hang gliders used to use AM CB radios. Several years ago I ran into one of the flyers and he told me more about their history. In the late '80s many flyers would buy a cheap CB radio, solder together a pack of D cells and tape it to the radio. For an antenna they'd either dangle a 9' wire, or stretch a full-length CB wire dipole beneath the wings.

However, the high level of skip and the sometimes tremendous amount of splatter drove them to VHF. For a brief period they legally used a low-power VHF "itinerant" channel (151.625, I believe), but a high-altitude flyer would hear far too much traffic to make air/ground comms practical.

Around the time of the introduction of the Codeless Tech ham ticket, the local hang gliders moved to 2 meters, and settled on 144.250, despite complaints from local hams about them communicating with a number of evidently illegal stations, and about using FM in a section of 2 meters intended for SSB.

I frankly have no solutions: a licensed ham who feels no obligation to ID or refrain from talking to unlicensed stations, is certainly going to laugh at an ARRL OO postcard. Peer pressure won't do much, as the local hang gliders are fairly cliquish & are mostly not active in other local ham activities and are not often heard on local repeaters, except for using autopatches. While "responsible" jamming worked in NYC against the 28/29 mhz pirate cab drivers, it is not acceptible when most of the operators are licensed.

Perhaps we've been demanding too many cuts in our "big guv'mint": the FCC has had some major budget cuts and evidently been forced to cut back its policing of "hobby" radio.

To the previous poster regarding mods on this little radio, it is very simple.... Remove the rear cover, look for the red loop of wire around the Lithium Ion battery, clip the red wire loop, and put the cover back on the radio!! RESET the radio by holding in the function and MW buttons while turning it on.. That's it!! Very simple.....

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

One again guns are responsible for student deaths. If the gun did not exist do you think this kid would have gone to the cafeteria and tossed knives? The ham radio connection is that most hams have no guts and they are more likely to have a gun to "buy" their guts.

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. A naked chic
2. An actual picture of Burt on the throne.
3. The writings of me and others on ham radio, hear a typical ham contact.
4. The warm side of K1OIK, hear me speak, see me with famous people.
5. A test for your SVGA monitor
6. Pictures of me and my family.
7. A Nazi connection in ham radio?
8. See now the future of ham radio.

as far as I know, many people don't use packet anymore. some people use it for internet e-mails though. I am sure it's going to change like that in ham radio also. not many people use ham radio in the future, but they will use it as cellular phone by setting up autopatch stations around the world (and this is a good way to keep the spectrum).

Media is focusing too much on one violence.

As media broadcasts the violence, the situation becomes even worse
(you hear this and this is going on and so forth and some people think
it is normal to do such thing). Anyway... please don't focus too
much... you will make it even worse...

There was a research done regarding to the TV / movie etc. There was
a small community with no TV (ie. no freq to receive and no cables
either). After setting up the TV system (either freq or cable), the
crime rate raised suddenly by 2 times or more.

As for guns, I believe that the parents are responsible.
If the parents are responsible for their kids, the kids will be
responsible for themselves. It's natural. And amazing enough...
most kids (who get focused on medias) get guns from their family...

There are about 40,000 deaths do to DUI in the US each year. Obviously
cars are the problem. Should the government come to your house and
confiscate your car?

If the cars did not exist, 40,000 people who died last year would be
alive.

No, he might have left explosives (one of his "interests"), or thrown a
molatov cocktail, or mixed up a toxic gas from recipes on the 'net, or
driven a car into a crowd of students, or any number of other forms of mayhem.

If he had been thrown into jail when he was caught and arrested for
bringing a **stolen** gun to school the day before instead of having his
hands slapped and being sent home to his so-called parents, do you think
he would have been in that cafeteria?

Burt: unencumbered by the thought process.

Totally irresponsible, Burp. But what else would we expect from a
card-carrying socialist like yourself?

Actually, the proper response here would be to REQUIRE all students and faculty
to be armed. That way, the killer could have been eliminated immediately
before he had a chance to kill and injure additional innocent people.

Heh heh, watch as the teacher places responsibility for a death on an inanimate object. Brilliant. Did the personwho pulled the trigger have anything to do with it Burt?

> If the gun did not exist do you think this kid would have gone to the
> cafeteria and tossed knives?

Carla Faye Tucker who was just recently executed did not use a gun, I believe it was a pic-axDid not having a gun keep her from killing Burt, no not hardly. The Uni-bomber killed quite a few, never used a gun.
Not sure that Bundy ever used a gun.

> The ham radio connection is that most hams have no guts and they are more
> likely to have a gun to "buy" their guts.

When someone breaks into your home and try's to kill your wife and family what will YOU do Burt?Throw matzo balls at him and tell him he has no guts? I love your twisted generalizations of hams approving the Oregon shooting, much like the generalizations Hitler had regarding Jews. Judge them all by association not as individuals.

That is the typical bull crap you hear. It's not guns that kill people it's
the stupid, screwed up people that let there children have access to them.
Where in the heck did the kid get the gun? Why wasn't it locked up?And it
all comes back to the parents not taking responsibility to make sure the gun
was properly secured.
Burt you are a idiot!!!!

Greetings, my girlfriend and I are getting ready to take a cross country train trip. We will hit a few citys in route, and may want to go different ways. So, she wants to get her ham license ASAP. Can anyone tell me sites that are available in the Jacksonville, Florida area, this weekend, or or the begining of next week. She has been studying and would want to take the Novice and Tech exams. Thanks, BiLL

Hey! such a broad statement is invariably incorrect. Nothing and nobody
is 100% bad, or FRAUDULENT.

I've used CorelDRAW for over 6 years and have no complaints. It is a
great drawing program. I've used it to make everything from brochures to
letterhead & stationary, adverts, invitations, etc....

Looks like all of your complaints are for the Word Processor. Why not
limit your comments to the subject you are complaining about, or show
proof that ALL their products are junk.

Mark N6WBC

BY THE WAY, HOW DOES THIS RELATE TO HAM ANTENNAS AND EQUIPMENT??????

Can we just drop all this crap. Guns are not responsible for deaths, it is the PERSON WHO PULLS THE TRIGGER. Just about all of the guns used to commit crime were stolen/untraceable, They are not legally owned. If you feel that this is not the case you are a total IDIOT. Read the facts of the cases not what the "news media" hypes. You will find the truth, not what they want you to see.

2982. Help. Motorola DPL?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-23 00:00:00 UTC
From: gilligan@sam.neosoft.com
Message-ID: <3566f609.4400540@news.neosoft.com>
Source record: 171566

I have an Alinco DJG5T that I want to set up to communicate with a Motorola that is using a DPL code of 464. Can I do this? Or do I have to have the Motorola reprogrammed to use PL? I've tried using the DSQ capability. But, I don't know if I messed up or if they're just not the same thing.

Also, I've got the PL to CTCSS chart. But, I'm not certain how DPL works. Anyone explain it to me?

Thanks.

10m dead? What have you been smoking. Band's been open every evening for the
last week into the Midwest, Southwest, and occasionally even into Canada.

Make sure this is posted to every newsgroup whom Burp has trashed with his senseless and off-topic crossposting. The guys in the submarine newsgroup need to know about this, too.

2987. Internet Elmers Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-23 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <CeD91.1830$t4.1592779@newscene.newscene.com>
Source record: 171571
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Based on data reduction and analysis of an ongoing log of actual compound subject/geographic queries of the Amateur Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

I've concluded that there is a need for Elmers in the following three categories:

- Elmers in geographic areas that do not appear at all in the Directory

The following U.S. States/Commonwealths/Districts/Populated Territories, Canadian Provinces/Territories, and those Countries representing the top-10 countries in licensed amateur population (based on IARU statistics), do not have any Elmers at all in my Directory:

American Samoa
District of Columbia
Guam
Iowa
Montana
Nevada
New Mexico
North Dakota
Puerto Rico
South Dakota
Virgin Islands
Wyoming

Manitoba
New Brunswick
Newfoundland
Northwest Territories
Novia Scotia
Nunavut (beginning in 1999, currently part of Northwest Territories)
Prince Edward Island
Quebec
Saskatchewan
Yukon Territory

INDONESIA (listed here for completeness; considering the political situation, I don't expect to recruit many Elmers from this country in the near future)
JAPAN

THAILAND

- Elmers in specific, frequently-requested, subject/geographic category pairs that do not appear at all in the Directory (at least at the time the requests were made; they might currently appear in the Directory, based on recent updates)

The following are the most needed subject/geographic category pair Elmers that did not appear at all in the Directory, based on an arbitrary "No match" query threshold of 3 or more. They are ordered alphabetically by geographic area, then by need. The number in parentheses represents the number of requests for such an Elmer since the compound subject/geographic query was added around mid-1997.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

For more information and links to Your
Congressmen and Senators please visit:

Well to start with, your radio is not type accepted for use in that band and it is illegal.

That being said, and if it doesn't worry you, it certainly doesn't worry me. PL and DPL are two different animals of squelch encoding. PL (Motorola trademark for Private Line), simply involves low level, subaudible tones that open the reciever when they are present on the transmitted signal.

DPL or Digital Private Line, sends out low level, digital pulses along with the transmitted signal, to do the same thing.

If you looked at a "PL" signal on a service monitor scope, you would see a sine wave. If you looked at a "DPL" signal on a service monitor scope you would see a pattern of square waves.

The two formats are not compatible with each other and I know of no method to incorporate DPL in converted Amateur gear. As for the Alinco "Coded Squelch", that is really nothing more than a series of touch tones generated from the key pad to open up the reciever on the other end. A lot of the later model amateur radios have this feature.

Andy

I have some pcs of this excellent valve. This is in fact a real GEC
KT 88 inside the bulb, but with a top cap and 12.6V 0.8A heater. This
valve can stand 1250V on the anode.
NOS, but in white boxes. They were spare valves for a transmitter.
These are very scare and expensive. You will have to pay at least
 40.- for used, tested ones in UK. Or about US$ 65.- each.
My price is US$ 70.- each for new, unused.
E-mail me for details.

Best regards,

Arnold Goks yr

Ok tnx Cousin Jethro. I'll buzz by your site and see if I can figure out how to post my message about Corel.

Thanks

I notice there are replies favorable towards Corel's bullshit products. Sure, there will be some who like it and and have no problems. No, not everything is bad, as the one fellow said.
That's true

I just look in the recent magazines and when writers for PC World and PC Week say Corel Suite 8 is all fucked up, then it most likely is fucked up.

But you can't look for accurate reviews in Macworld cuz they're all friggin lyars. They say EVERYING IS BEAUTIFUL. If it runs on a Mac, then it must be ok. Macworld, totally unreliable reporting. Too bad, really, cuz the Mac is a nice machine. U should try one, Jethro. I've tried your PC.

I'd rather take the word of magazine reviewers who find lots of problems with a product than an inexperienced non-professional computer ""hobbiest"".

Don't fucking mantter, man. Just look at Corel's own website, review all their bug fixes and you get the picture. Denying it don't fix it.

Nothing new here Jethro. I hear you slugging it out on the radio. It's all good entertainment. Very funny. U'r both right, both wrong.

Everybody bitches, moans, jams, pontificates.

I don't pay much attention to all the politics anymore. There are so many WHITE TRASH white people where I live, I just wish Kevin Alfred would come down here and have a look for himself. White folk need to clean up their own gargabe pile before bitching about negros and jews. That's how I look at it.

And the Christians need to examine their own dirty laundry before pontificating about all the crooks in congress, etc. Most of these politicians they bitch about are Christians. That's the pot calling the kettle black.

Christian logic is ILL-logical. A hodge-podge of confused thinking.

And Side Car Sidney needs to get himself a brain.

Ditto for KE2LO. Ditto for way too many of those turkeys on 3950. I've heard frogs burping in the night that make more sense than some of the shit I now hear on 3950.

Doesn't much matter tho. Things are going the way they will, and are not likely to change because people are greedy, and lazy, and have no idea who their enemies are. And even if they did, what would they do about it?

Uncle Vic has nothing better to do than bitch about Slick Willie. Who the hell cares who Clinton is fucking??? How wasteful can one get? If Vic did get Slick Willie impeached, would he be happy with Al da whore Gore?? No, then just more bitching to impeach Gore. Yes, a never ending spiral of nonsense.

So why get upset???????????

KJI needs a conscience, which he's never had. A few pins in his coax, too. And a muzzle for his dirty mouth. Some cobwebs in the final of his amp.

KJI, the ultimate scumbag of ham radio.

And someone ought to go drown that fucking moron AB5 Monkey Vomit character.

Oh me, 3950 never changes, does it? But if it did change, maybe no one would enjoy it anymore.

Really, who would bother tuning 3950 if everyone behaved like gentlemen?

I think maybe I'll run for mayor of Freistatt next year. If I lose, then I can try for Radio Commissioner in two years. Pass an ordinance requiring all Freistatt residents have shortwave radios that tune 3950. Next thing you know, my apartment will burn to zee ground.

cul tnx

good luck slugging it out on 50. have fun. That's what ham radio is supposed to be about. Have a little fun, whatever it takes.

NX0T

2999. Gutless W1KV is boweling again.

Are there any hams in the Riverton - Jackson area of Wyoming who could help a friend of mine in Dubois who is interested in getting his ham licence? He needs someone who can give him some help and advice about how to go for his licence, and give him some ideas about the hobby. He has no previous experience of radio - but is willing to learn. I have helped him as much as I can on his visits to the UK, but he needs a local contact and so far he has not had much luck finding any local hams.

What others tell me:

Hello Burt,
It is rather tragic to see the juvinile garbage coming from the USA in many area of Internet, including the amateur sections. Reading the comments from various so-called amateurs on the amateur newsnet leaves oh so much to be desired. The garbage is all and only from the US. I just picked out you by chance to reply. I would like to inform you and all your tunnel-vision US amateurs that a greater percentage of "hams" around the world work "barefoot" - 100 watts and quite often with not much more than a dipole and/or long wire.

...Calling CQ-DX is quite common on all international HF bands. It is quite possible because of all the drivel eminating on the "ham" bands in the US, you may rarely get to hear the rest of the international amateur fraternity. Perhaps - and I would be surprised if what I am to say were not true - too many American Amateurs treat the radio hobby as CBers treat and violate the CB bands....!

It is indeed unfortunate in that too many of your compatriots fail to grasp the fact that the whole world sees (Internet) and hears (amateur radio) so much drivel originating from the USA. While there are many good and highly skilled amateurs in the US, there would appear to be a majority who are nothing much better than the worst type of CB operator. During the Second World war there was a well known saying...."When the British were bombing the Germans ducked for cover. When the Americans bombed everyone but the Germans ducked." It would seem that saying still applies today. When US operators are on the Net the rest of the world turns off. And when you are on the Amateur Bands.....! Need I say more! You have my full permission to insert all my comments on the BBS Nets used by yourself and other US amateurs.

I have received a number of personal Email complaints about off topic posts. I must admit the posters had a point. No matter how important I think not owning a gun is, it may not belong in any of the above newsgroups. I will endeavor to post only messages with a ham radio theme and that theme will be related to the conference I am posting in. Thus I doubt you will see any more posts in any group but misc. Is that better? People have a right not to deal in weighty issues if they want to get away from it all. They could be called off topic but they were not SPAMS.

Comments?

Burt

Dear Madam/Sir,

We are interested in your company's opinion about the use of your
radiocommunication system. Please respond.

1) Your company is interested / performed in which method of
communication ?
___ Satellite / Digital Network
___ FM
___ AM
___ SSB
_x_ CW

2) Your company's opinion about the speed of communication:
___ Internet is the most
efficient and the fastest
___ Digital Sattelite system "
___ Analog "
_x_ CW "

3) What is the percentage of the employees who know about the ham
radio ?
___ 0
___ Less than 5%
___ 10%
___ 25%
_x_ 100%

4) What is the percentage of the employees who know the morse code ?
___ 0
___ Less than 5%
___ 10%
___ 25%
_x_ 100%

5) The use of cellular phone (employees) in your company...
___ is permitted
___ is not permitted if it is in analog
___ is not permitted if it is in digital
_x_ is not permitted because one can use the radiowave
without knowing the morse code.

You really don't get it, do you? You come on here and brag about what a wonderful life you have. If that's the case, fine. More power to you. But if you're so important and fuffilled in your existence, why do you persist in following me around this newsgroup? Why do you answer every post I make, even though they are not directed towards you? Why do you (by your own admission) spend large amounts of time searching through DejaNews for old posts of mine or of those whom you believe to be me? Why is all of this so important to Casey Thrower?

Burt,

That's nice. I usually try to stay out of the fray involving your posts, but out of curiousity I did a DejaNews search. and the results were revealing: all but a few, who knows, 5%? have nothing to do with particular issues like code/no-code, bootleggers, spectrum loss, the ARRL, etc. Looking at the other threads in this group, you are conspicuously absent from discussion. Virtually all of your posts follow the same themes again and again: hams are dumb, gun-wielding maniacs who last did a reality check in 1960. Why do you bother? If you really believe this, I would think you'd want to get as far away as possible. To others: please don't respond to this post explaining the defects in Burt's character, and start a nwew round of bashing.

Re: YB 400 AC Adapter

Last weekend, I purchased a Grundig YB 400 on closeout
for a mere $99. I wanted a decent backup shortwave
radio for my main receiver, Sangean ATS 909/DX-398.

Now, I need an AC adapter? What is the part number
for the Radio Shack AC adapter that can be used with
the YB 400?

Thanks,
Tom Welch

Well, the thing is, No-Code licenses did put a lot of people on 2m. Unfortunately, due to the cost of a 2m all-mode or SSB/CW rig, most people only use FM. I would love to work 2m CW or SSB because there's no congestion at those frequencies, but the cost of the equipment is rather restrictive. I think the 2m CW portion would be a great place for people to go to practice CW locally without adding more congestion to the HF bands where those who already have their General & above licenses hang out. I also think that if there were more inexpensive equipment available for CW on some of the other bands, this would be a good thing. How many people would like to get hands-on code practice before taking their code tests? I know I would have loved to have done just that. It would have made passing my code test so much easier than just slogging through the tapes for hours on end.

Maybe someone has a kit somewhere...?

Hi ya Sco

I think you forgot to trim the x-post from the quoted article. Anyway
this is pointed to r.r.a.misc alone.

It would seem that school is out for summer and k1oik has found time
that he hasn't wasted yet. Don't worry, he will waste it though!
Perhaps a little fodder for Burt's bovine excrement device would a
thread involving male teachers' relationships with their female
students. Of course the teachers are all licensed amateur radio
operators.

Can ya see it on Springer? Ham teachers and the students they have run
off with and marry! Perhaps a live remote from a remote Alaskan town.
The other angle of course is the gun-toting student ex-boyfriend.
Perhaps the teacher's first wife and his children by her will be there
as well a the current spouse and her offspring. That might be k1oik's
oft-sought confrontation. Consider the PPV dollars from 'cheap' hams
all over the country!

This is typical of the left. In their insatiable sesire to usurp the Second Amendment and ban gun ownership by private citizens, they attempt to paint all gun owners as killers, rednecks, and anti-government terrorists. Just as the cellular telephone lobby painted all scanner owners as eavesdroppers and perverts in their efforts to ban listening to those portions of the public airwaves that they feel we shouldn't be allowed to listen to.

No problem. You can purchase just such a filter; it's called Forte
Agent, and it's only $29. Check at

http://www.forteinc.com

for details.

I know you're psuedo intellectual who isn't smart enough to have a
real job. You must still live off of Mommy and Daddy, because you
can't make a living off 6 bucks an hour. I think you're a bitter
person with no life, no women and no personality. I guess that's why
you stay on here and bore the hell out of everyone. I just wonder what
other newsgroups you bother. I'll bet you have other handles around
the usenet that I could find. We shall see. By the way, punk. Only
mnmaniac and JamTheHam referred to me as "Sir Casey". Sorry dummy, you
blew this one. Now I will see where I can find you on another
newsgroup. Adios peckerhead.

3043. Re: Gun owners and Burt.

Source record: 171679

What happens when someone gets shot? They try and take the law abiding citizens guns away, and they give the shooter life so he can get out and kill again someday. My question for Burt is this: When a burglar breaks into your home and your waiting on the police, what will you have in your hand? A gun or your pecker? Now back to a ham radio related topic.

Genie

A man found a bottle and was dusting it off when a genie appeared. The genie said, "I will grant you only one wish, what will it be?" After thinking a moment the man said, "Well, I have plenty of money, a nice house and a wonderful family, but there is one thing I would like to have: a vacation. I know, I would like to go to Hawaii, but I don't like to fly, and boats make me sick. What I want you to do is to build a bridge from California to Hawaii so that any time I want to go there I can drive." The genie replied, "WOW, do you realize what a tremendous request that is? That is over a thousand miles and across probably the deepest part of the Pacific ocean. Can you comprehend how much steel and concrete that would take? That would be a tremendous undertaking. Are you sure there isn't something else you would like to wish?" The man thought for a minute and said, "Yes. Please explain hams to me. They are so boring, they repeat things, they never show any guts and they hide behind their mikes. How can anybody have a life like that? The genie replies
"Will that be 4 or 6 lanes."

Hey Burp, you might want to take a trip over to rec.radio.cb and ask them what happens to characters like you. Just a few months ago, there was a guy who constantly harassed other users, invited them to "come get me", made dishonest business deals, and basically dared anyone to do anything about him. Guess what? He received a nice pipe bomb in the mail and is no longer with us.
Are you next, Burp?

I like that Burt. I think it is funny, however I have been a Ham for over 25 yrs and very much enjoy talking to people all over the world. I don't think you can explain Hams anymore that you can explain life. There are too many aspects of the hobby to narrow it down to one simple answer.
I do enjoy most of your responses to other folks (most don't realize that they are the one being had).

David - W4DSM

Disappointed with your Windows logging or packet software?
Try XMLog, freeware that's available on the Internet.
XMLog provides a flexible set of coordinated logging
and packet features.

XMLog is available at: http://www.xmlog.com

** Request for help **

One of the most requested new features for XMLog is reading
the frequency/mode from your rig when creating a new log
entry. In my current test version I have added this feature
for my Kenwood TS-950. What I need next is documentation
for other Kenwood rigs and for the FT-990. I also need
volunteers to test this new feature on rigs other than the
TS-950. If you can help pleas send me some e-mail.

*** Feedback ***

Let me know if you:
- Want more info
- Can't fetch the file
- Want a diskette instead

Have fun...

Ha ha ha ha, so typical of you Drew, show your stupidity, then back out with a
cheap one liner like the one above.Along with being cheap, it makes no sense what
so ever, now explain to me Drew how exactly do you come up with
"Latino sympathizer" from the fact that I enjoy tacos with guacamole and I speak
Spanish? Quite a streatch dont you think?
What about those things have any bearing on my sympathy or lack of for the latino
community? You must be taking lessons from Burt and Masa, when someone points out
just how stupid your comment is, you dump in a
quick one liner and head for the hills.

Using DspGold with my AEA DSP2232 Multi-Mode. I deleted the text files and readme files after installing gold, needed the HD room. Needless to say bad move because my hard drive puked and I can't find my install disk. I've got my windows backup disc to reinstall gold from but don't have the text files because I zapped them BEFORE the backup. Another stupid move! I'm not sure if there's any helpful info in them or not but would like to have them nonetheless, just in case. Now I've got tons of HD space so once their back on they can stay on :) If anyone out there has DspGold from Interflex and can e-mail the text and readme files it would be very much appreciated. TIA

Neither do the first, third, fourth. . .amendments.

In the first amendment, the right of the "people" to peacabley assemble applies to individuals and limits the power of any level of government. If the "people" are a collective such as the state, no one can assemble unless they are members of the national guard or other state sanctioned function.

Also, in the fourth amendment, the right of the "people" to be secure from unreasonable searches and seizures is an assertion of individual rights and a limit of all levels of government. Same for the other amendments comprising the bill of rights.

In the second amendment, the right of the "people" to keep and bear arms are an exception???? a collective right??? Think!

A state cannot have a RIGHT. States only have AUTHORITY granted to them by consent of the PEOPLE who have RIGHTs.

Read the federalist papers. They explain it all.

3091. 1964-era transceiver (2 tubes) you can build!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-24 00:00:00 UTC

Well folks at long last it is almost ready, and you can get a SNEAK PREVIEW this weekend if you like!

This little transceiver project is a very thorough presentation with several pages of text and graphics.

As a 13 year-old boy I was introduced to the joys of radio by various friends. Back in those days there was a cool magazine on the news stands in Britain, called Practical Wireless.

I devoured every issue that I could get my hands on, spending hours poring over the advertisements etc.

I think the June 1964 issue was the first one I ever saw, and I was fascinated by the thing! Here I present a copy of the article showing how to make a portable tube transmitter (10 watts) and regen receiver, that ises a total of TWO TUBES!

I hope some of you may actually have the joy of building this tiny station that is small enough to fit, "IN AN OVERCOAT POCKET" and yet capable of working the world on 7 Mc/s.

If anyone wants any explanations on the strange terminology or symbols used, they are welcome to e-mail me!

The money symbols refer to the OLD British money system using:

5/- to indicate five shillings
2/- indicates 2 shillings.

The magazine was abit phoney in that they gave the "blueprint" with the magazine at no charge, and it was obviously printed ONLY to accompany the magazine, and yet they printed a PRICE on the blueprint to try to make you feel that they were doing you a big favour by giving you something extra for free!!

I have some 6GW8 (ECL80) tubes here, and I may try to reproduce this little rig myself, even though I am not particularly fond of regen receivers (grin - sorry!)

Everyone please take a look and enjoy the article. I will be adding a couple more pictures and improving the layout. Most of the pictures enlarge if you click on them.

Unfortunately for you Cutie Boy you lack the knowledge of Amateur Radio vs Commercial use of radio. Your survey, while in jest, makes as much sense as most of your other posts. In case your wondering that's zero.

Commercial use of cell phones, Internet, radios etc. have nothing to do with Amateur Radio. One day I hope
you'll actually be able to make a point on this newsgroup by stating something that's relevant to our hobby.
Can you explain your point with this post called 'Interesting Survey' ?

What's the audio output on the DJ-C5T?
Can you hear the speaker when you have it in your shirt pocket?

Also, what's the extended range after Mod? Does it have continuous
(almost general coverage) reception like other small dualband HT's?
Thanks

Sid

Again, as I mentioned before, if you try to harass via e-mails, you
will get a hell a lot of complaints.
First, you will receive a note saying that you have to stop sending
the e-mails & otherwise he will complain to your ISP (now... how do
you keep harassing). Second, if you keep harassing via e-mails,
someone will complain that he is continuously receiving harassing
e-mails (spam ?) and the one's ISP account, who is sending e-mails,
will be cancelled and the one who is sending the e-mails may be taken
to court.................

Well, now I've heard everything. We have created a new group of Victims, who by the meer action of public harrassment, are now to be hassled and persecuted by their ISPs.

Goddammit what is this Internet coming to that we no longer have a viable outlet for personal harrassment? Someone ought to sue.

Cutie Boy, that will be YOUR job.

3105. FS or Trade: Camcorder

I have a Sharp VC-C10 color camcorder to sell or trade. The camera is in good condition and has a new battery. It comes in its own carry case and is ready to use. This is the larger type camcorder that used standard VHS video tapes, not the small size tapes that need conversion.

The camera has a 9-54mm 1:1.4 auto focus zoom lens, built in mic., carry handle and carry strap. Also a swing up viewer. An adaptor is provided so you can play the tape through your TV without needing a VCR player. Very handy. Of course, you can play the scene through the view finder but not in color.

I would like to trade this for useful ham gear. I could use a small 2M HT, HF antennas, Mobile
equipment, test equipment, what have you.

Will I sell it? Sure. It is worth a hundred or so. Make an offer.

Thanks,

AL

>
>I say we meet.
>You are close enough.
>You define ass kissing on the air because you are 1000% DIFFERENT.
>Of all the hams here, I have the least respect for you.

At least it is some respect. I have NO respect for you.

>They do not say nice nice on the air and act tough here.

You are not making sense here. Do unto others as they do unto you. I
was cordial to you because you were to me on the air. Had you become
confrontational during our QSO I would have simply shut my radio off
and washed out my speaker. You did not become confrontational which
means YOU were kissing MY ass.

You are always projecting your own shortcomings onto others. Why?

You even posted that I had guts because I talked to you on HF. Then,
I guess you must have gone out and gotten drunk and reflected upon
that which you regretted and started posting crap contrary to what you
first posted. Thus, I responded in kind.

Burt, I will be more than happy to meet you face to face. I will not
waste my time travelling to meet YOU, though, so if you want it to
happen get off your duff and come to Lowell. You are the one who
wants people to come to you, if you really had the guts you would go
out and meet them.

It's pretty easy to take the passive stance isn't it Burty ole boy?
Good ole wordy Burty is a passive turdy. Big talk. And when he runs
out of talk...he repeats old talk.

3109. ICOM T8 problems

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-24 00:00:00 UTC
From: Chris Boone <cboone@earthlink.net>
Message-ID: <356834C0.7CEA@earthlink.net>
Source record: 171533
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have found a MAJOR flaw with the ICOM T8....the battery
clip breaks ALL TOO EASILY....I lost BOTH of my batteries in 2
days...including the new BP200 I got at Dayton (and they are hard
to get!)....trouble is they use plastic in a flex area...and
the torque at that spot is more than the plastic can handle
and it breaks straight across.....(just at the top of the curve
if you look at the battery sideways!)...did it on both at the SAME spot!

I called ICOM and told them this was idiotic.....
this is a POOR design.....they should have used METAL there
as the spring NOT plastic OR made it a SLIDING clip NOT
a bending one....ICOM IS supposively sending me replacements free of
charge....BUT I cannot use my HT until then.....and what if THOSE
break????? THEN what????? I CALL on ICOM to issue a RECALL on all
batteries and replace them with a NEW and stronger design....ALSO,
change the CHARGING port to the BATTERY, NOT the HT!!! I cannot use
the wall charger unless the battery is connected to the radio...that
sucks!!!! The radio is GREAT....but ICOM sure didn't do its homework
totally on the battery system! Cmon, guys, time to fix it is NOW or else
lots of people will be pissed!!!

If you own a T8 and have had the battery clip break, I want to know...
also lets write ICOM and demand a better battery clip......(BTW I
tried glueing the clip back using SuperGlue...the glue held...until I
either put the battery in or tried to unlatch it...depending on my luck!
too much torque stress at that point for it to handle....period!)

No, it is not spam, it is harassment. ISPs don't just have policies
against spamming. Check your facts, boy.

> and the one's ISP account, who is sending e-mails,
> will be cancelled and the one who is sending the e-mails may be taken
> to court.................

Court? You've got to be kidding (wait, look who I'm talking to!). People
are not taken to court over emails. This kind of thing is mean, but
certainly not illegal.

3113. Re: Help. Motorola DPL?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-24 00:00:00 UTC
From: "Rich M." <right@home.com>
Message-ID: <zKW91.205$q5.662363@news.randori.com>
Source record: 171537

DPL(Digital Private Line) and DCS(Digital Coded Squelch) are the same. I believe it uses a square wave pattern and a turn of code at the end of transmission. DPL is also slower to decode than PL tones above 100 HZ. PL(CTCSS, aka Channel Guard, subtone, tone, pl tone) are actual audio tones below 300 Hz sent at low deviation so as to be able to filter them out of the receive audio easily. DSQ I think is a Dtmf SQuelch. Someone may correct me here if I am wrong but, I think that all this is are DTMF tones sent to open the squelch of the receiver. The three systems are not the same and one will not activate the other. Change your Motorola to PL to be compatible with your Alinco CTCSS(PL).

Hope this helps.

3118. Fleming to amateurs: switch off

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-24 00:00:00 UTC
From: Joe Knapp <jmk@worldnet.att.net>
Message-ID: <6k9fv3$dnc@bgtnsc03.worldnet.att.net>
Source record: 171542

Found a good quote from an article dated Sept. 13, 1912,
British journal "Engineering." The article is by J. A. Fleming,
inventor of the Fleming valve:

What is required in the present state of radiotelegraphy
is to restrict everywhere the mere useless amateur
playing with wireless telegraphy, such as that which has
become an intolerable nuisance in the United States,
but is wisely held in check by our Wireless Telegraph
Acts in Great Britain. At the same time all reasonable
opportunities should be afforded to serious
investigators, especially for such scientific research
as I have suggested, to enable us to arrive at a
solution of present unsolved problems in
radiotelegraphy, and also improve still more this
most useful and marvellous method of
intercommunication.

No, not WE Libnet, YOU. Spanish is the 2nd most popular language in the United States and there are many ofus here who speak and read it, too bad you don't.

In the magazine "Pearls and Caves" on line at www.babysoftware.net, you can find all the news
about Mallorca (Spain) and mailboxes where you can put your own personal news.

When the bands are open I spend my on the air time practicing Spanish and increasing my vocabulary. You spend your time listening to the incessant blabber on 75m. I guess if you listen to it long enough, you'll be as smart as they are. Ha ha ha ha ha.

You must spend some time of your own listening there, since you seem to know so
much about what goes on there. Hey, are you the jammer with the Tarzan yell or
is that your friend Thrower?

Why not start a moderated newsgroup? I would like to see one. Before anybody asks why don't I start one myself, Let me explain that I have no means of inexpensive internet access (INMARSAT A is about $9.00/minute) from my ship and so could not assist in moderating.) Somebody with a 9 to 5 who is home every night or a retiree would be the ideal person to head such an effort.

I would certainly participate while I am home, and assist in any way possible. Any net.gurus out there willing to take this on?

Get with the program, Drew. Usenet is an international thing. Nothing in the name of this newsgroup says "English only" or "American only." Why flame the guy just because you don't understand him? If you can't read his post, why not just let it be his loss instead of your problem? Don't be such a xenophobe.

Your absolutely correct, Great Radio.....Lousy Battery. You would think a design group capable of packaging a radio as complex as this could figure out the easy stuff.

Where is Maha ? Hopefully they will solve the problem with a better belt clip as well.

Several hams were exposed on the beach in Dennis. They were then
covered with towels and taken away.

Visit my web page, see thoughts of summer
1.See hams who don't care what people think of them in bathing suits
2.See a ham operate "QRP portable" and ignore nearby shapely women
3.See these women giggle hysterically at the phrase "hi hi"
4.See a ham damn near sink a inflatable raft
5.Preview the junk peddling old men at the BARC hamfest
6.Get your free hamradio Q-decoder ring
7.See a ham testing salt water conductivity for his vertical
8.Play baseball with a 3-500z
9.See what fishing equipment is meant to do, put lines in trees
10.See the latest in plaid swimwear that US hams will sport this year

Hi,

Just a word to let you know that HamNet-UK is now back online and revamped.

It now includes a software section, hundreds of UK and foreign links, a hardware section (nearly completed) containing circuit diagrams etc, plus loads of other bits and pieces. Its really worth a visit! And its updated very regularly.

Thanks for your time.

Gee Drew, I didn't realize you were so stupid. I didn't know you had to be part Mexican to speak a European language.As far as guacamole on my taco, there is no other way to eat one, and don't forget the cilantro. Tortillas de maiz por favor. Although for you I highly recommend tacos de sesos, if you eat enough of them maybe some will rub off on you.

> You must spend some time of your own listening there, since you seem to know so

Yes I have listened there before, wont bother going back. I don't jam Drew, too busy building and operating, mostly CW and mostly QRP unless it's a contest. I'm glad you've found a home on the Liberty Net, you can tell these guys are really going somewhere, real do-ers you know. Your in good company down there.

The tiny Alinco DJ-C5T is great....Works fine and is so small. ALINCO, are you watching?? All it needs to make it even better is a light for the display, and a FIX for the volume problem..
(Audio has a BIG jump in volume from level 6 to 7 !!!)

Other than that, good Transmit and receive audio and range, easily modified,tiny, light. (Good battery life with Lithium Ion.)

But, Glenn, you too have failed to see. No matter what happens, Burt
will continue to cross post or post off topic. It's what he lives
for. When Packet Radio still was functional here in Maine, he used to
delight in sending inflammatory replies to people. That's what he
does. You can ridicule him, threaten him, ask him nicely...it makes
no difference. He has no ethics that I can see. And he has a
vendetta against Ham Radio since his VE status was revoked for his
abuse there. I'm afraid we're stuck with him until he passes
on....and even then, he'll probably find a provder where he goes, I'm
sure Hades will have a domain by then.

I was talking to a couple running a booth at Dayton. They are
from Oregon and sell bags and other goods (like holsters) at
hamfests and gun shows. They were so used to west coast hams
that are very liberal and very anti gun.

They were very surprised that midwest hams are conservative and
usually carry guns. I would guess that the third of the folks
at Dayton had a weapon on them. My guess is that different types
of folks get into amateur radio depending on the area. Midwest
liberals just are not interested in technology.

What if the guy does not speak English? The obvious thing for him to do is post in his native language. He might not get many replies, true, but what is he hurting? His post was on topic. None of yours ever are.

Burden of proof? I am under no burden of proof. We believe you to be the one and only Drew Durigan. Your posts have not changed. Your style of replying to others' questions with non-sequiturial questions, and the old "prove it" line have not changed. That is proof enough for me. That is all I need. I care not a bit whether everybody or just most of us believe it to be true. I'm not making a case here... I amm merely stating a fact. I have not demanded that you prove you are not yourself... though I have stated previously that the fact that you continue to use an alias in the face of statements that you are in fact the Drewster when it would be so easy to just sign with your callsign certainly add credibility to those statements, IMHO.

You are not in a court of law. If you are on trial, it is in the court of public opinion. I am neither judge, nor jury, nor prosecutor, since I don't care how many do or don't believe you are not who you say you aren't. I am merely a spectator who has formed his own opinion based on circumstantial but irrefuted evidence. I am not trying to convince anyone. It doesn't matter. I am, however, convinced. The more you kick and squirm, the more convinced I am.

How does simply asking you to provide proof of your accusations constitute
"kicking and squirming?"

Actually, I don't believe there is. It would still be found by a "radio"
search. It means the same thing. Or "radioaficionado". possibly
"radiocomunicaciones". It would not be under "jamon", I don't believe but try
it just for kicks. I didn't.

How is that "politically correct gobbledygook"? Saying his post was more relevant than yours is "politically correct"? or is it "Gobbledygook"? I don't get it... which part of that statement are you referring to? The part about you owing an apology? The part where I urge you not to be a xenophobic bozo? Suggesting that if you can't read Spanish, or Russian, or JHindi, or whatever, that you simply ignore it? Come on, Drewsie. Give me a hint.

>"ailias?"
>
"Dad"? I hope to hell not. That WOULD give me a reason to hide.

By the way, no it is not an alias, as you should be able to figure out if you read the sig and notice the callsign. I have no need of an alias. I am not ashamed or afraid to accept responsibility for anything I do, say, or write. My aol screen name is the first letter of my first name and my entire last name, a very common format as you well know. I actually have a total of 5 screen names on my aol account. They are: RCrusoe, AB5VH, AB5VH/MM, AB5VH/QRP, and the one I used to use for aol chatrooms, Such A Dog. I have 5screen names so I can have 5 different 2MB blocks of disk space for my website. With only one screen name, you only get the one 2MB directory. The only one you could call an alias is the "Such A Dog" name. The others are all variations of my actual name or my callsign. Look me up in the FCC or the USCG database. Look me up by my ham callsign and you will see my address. I will give you a list of all my other licenses if you like. Visit any time. Spy on me if you like. Rather poor pic in your MIX 103 site so I might not recognize you, though Gringos are rather scarce here and you might get a second glance.

If you don't have a callbook, try http://www.qrz.com. You can look up any callsign you want for free, though you are encouraged to buy the CD. There are a lot of ham programs and files on the CD which can also be downloaded there.
>
"Dad"? give me a break.

Had to hit that one more time.

Have you been to my website yet?

It is not only your demanding legal proof, though making this out to be a trial of sorts does look pretty defensive. No, it is your slipperiness and evasiveness. You are asked a question, and you answer with a question, then you change the topic. If it isn't somebody's grammar or spelling, it is a point of law, or a "Why do you call me Drew?" question, or some totally mindblowing subject change. That is kicking andd squirming. You refuse to be pinned down to a name and callsign. Oh, here we go... I have heard it before... "A name or call is not required on Usenet". Well, politeness in public is not required. Giving to charity is not required. Being an honest man is usually not required. Being a decent, kindhearted human being is not required. Nevertheless, when somebody starts trashing innocent people, others start asking themselves how many good qualities does the trasher of innocents have. The rght thing to do, if you are gonna throw your hat into the ring, is stand up and be recognized like a man. If you were not so vocal and mean-spirited, you would not be held to the higher standards, but would probably be able to lurk here anonymously and unmolested. Since you spend all your time attacking others instead of once in a while helpng somebody, required or not, I expect you to put up or shut up. The "put up" part means a callsign or a name. No, just because I or anybody else expects it does not force you to shed your alias. But it does tend to lower others' opinion of you that you do not, when clearly the right thing to do is to come clean.

We would not be having this discussion if you either:

1. Had not flamed an innocent poster, or

2. Did not hide behind the many aliases you have used.

Either drop the pretense at anonymity, or start being a decent juman being.
That's how you will keep people of your back.

Heh heh, why? well several reasons, your moronic posts, childish behavior, lack of knowledge, inability to make a valid argument about anything, and poorly formed opinions are exactly in line with Drew, Jamtheham, CBRambo and whomever else you have called yourself. Additionally Drew did exactly as you do, ask a question or make a point that he knows not how to answer and as sure as the sun rises in the east you'll get a cute remark or reply that has no relevance to the question. As hard as you try, it would appear that you just can't hide stupidity. At least not in your case, that's why everyone calls you Drew. But that's ok if you prefer TheLibNet that's fine, you'll change it soon enough and be back with a new alias. After reading a few of your posts under the new name everyone will once again know it's the idiot DJ back on the group. Oh well, I guess if you find it entertaining good for you, your getting to be quite a bore though, very much like Burt and Masa, no ability to communicate, just name calling and one line responses that usually make little or no sense.

You're so full of Burt. There was nothing confrontational during our
QSO on 10m or on 75m. We did discuss some of the antics of the
newsgroups but nothing confrontational with one another. And, I
explained to you that I thought you posted the horse's ass to QSL.net
yourself and you explained that you thought I had done it. I think
that was as confrontational as it got.

It was a totally impromptu QSO and I thought you were a pretty decent
sort when it was over. You even seemed to be fairly decent on the net
afterward but I guess you went trolling later, either that or you have
a multiple personality disorder or are a hypocrite. Of the two which
do you profess? Now I think you're a sleeze.

That's correct. In neutral air, the index of refraction is primarily a function of the atmospheric density gradient, not frequency. But in a weakly conductive media like the ionosphere, the refraction index does depend on frequency. For a given conductivity gradient, the refractive index will be greater at lower frequencies (down to the point where absorption begins to dominate). This can clearly be seen as the Critical Frequency shifts up and down with the level of ionization of the ionosphere.

Cars deaths are accidental. I don't remember hearing of a kid steering a car into a crowd of students. You have no point. Shooting someone with intent to kill is not an accident. Kids grow up with a fasination of guns. TV, the news, and gun lovin' parents are likely at fault. The NRA say's that education is the key. Gosh I think these kids already know how to shoot.

Enough said, our society has no real use for guns regardless what you say. They kill, thats what they were made to do and thats what they're being used for.

3172. Yeasu FT890 help ???

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-25 00:00:00 UTC
From: jeddlj@aol.com
Message-ID: <1998052515484500.LAA19279@ladder01.news.aol.com>
Source record: 171393

Is anyone familiar with the FT890. I have had mine since new and it has developed a interesting problem.

For some reason it drifts. It gets less when you leave it on for a while and is only slightly noticeable. ???
Have cleared the memory many times and still not the problem.
The antenna tuner will not come on sometimes also.
It sounds like it has something to do with the PLL getting off freq or not locking but don't want to fuss with it unless I know where to go and what to do. Always have been used to fixin my own but this one has me stumped???
Any help would be greatly appreciated.
Thanks and 73 Dave K4DLJ

Sir,

I am a member of the K7PP Repeater Group in Washington State. We provide communications on the 147.200 MHz + 443.400 MHz from 80+ miles into Canada north to Portland, OR south. Through out Washington State into Northern Idaho and parts of Montana. We have Satellite links with Hawaii and provide auto-patch for the Seattle area and with over 100 police/fire/resque/U.S. Coast Guard dispatchers in Western Washington.

Our repeater system would go away with the passing of RM-9267. At present, we have a web page devoted to getting the word out. Take a look at "http://www.halcyon.com/wb7vlv/newsdesk.html". If you can help get the word out, please feel free to contact us (George Miller WB7VLV) with any questions and add a link to our site.

I received one of the first T8 radios available in my area and immediately put it into hard service. It accompanies me everywhere - hiking, running, cycling and so on. My battery has been on and off the radio dozens of times with no problems. The battery performs well and fits the radio very securely.

Aside from the original antenna I have found the T8 to be an exceptional performer. It has outperformed the many Icoms I owned in past and it has exceeded my highest expectations.

Perhaps Icom had a bad series of batteries in a more recent production run?

As an aside - did the clips break while the batteries were being taken on or off the radio or did they break while the radio was being worn on a belt clip?

Good luck with your replacements.

Hello !
I will soon be operating with the special call CT98ELP.
I have always took care of my QSL cards, but the number
of QSLs received is getting higher everytime !
To relief, and knowing that the call CT98ELP will be
very atractive, I am looking for an experienced QSL manager
that can take care of my QSLs.
The logging software I use is DX4WIN, or CT for contest.
I am a very active DXer and contester, but in last few months
I spend more time answering QSLs than making QSOs !

73 !

Cross-posted to: alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner

Hi,
Another newbie question. If I got a portable (leaning towards the Yupi 7100), Will an outdoor antenna always have benefits only, or can it "overpower" the reciever? I'm thinking for now any of the Radio Shack antennas like the discone or the smaller ones.

Thanks!

Bob

This might be a good reason to buy a 2m all-mode rig (used, if you easily fall into price-tag shock) and begin to populate those frequencies on which the unlicensed hang-gliders are illegally using. We already know the FCC encourages hams to drive out unauthorized users on our bands.

(After a moment's thought, I wonder if SSB will drive out the illegal FMers, though? What does SSB sound like over an FM rcvr? Would the lack of a carrier in an SSB transmission mean that such a transmission woudn't be detected in an FM rcvr?)

Burt wrote: "...on voice you sound like an idiot if you say
(the CW prosign) HI HI."

First, we're not using "voice" here on internet, Burt.

I'll now offer to send you $5, Burt, if you can honestly state that
you've *never* used the CW prosign "CQ" on voice, and that you've
always said its ITU phone equivalent "Hello All Stations."

You've ignored my $2, $3, and $4 offers so far - I can only conclude
that once again you've been entangled in yet another contradiction
that you so frequently weave.

73 from Nevada,
Jeff KH2PZ/7

P.S. It just occured to me that on the military RTTY and land-line
TTY circuits CW prosigns, Z-codes, and Q-signals were authorized and even
encouraged. Certainly our internet transmissions are very similar to that
of land-line TTY. Hence, there is no reason not to use such conveniences
here on the amateur radio NGs. Thus, QUQ Burt (HI HI!).

If you have a 300-watt pager transmitter down the
street from you, sure....an external antenna could
pipe in enough signal to overload the front end
and cause all sorts of havoc and consternation.

Much depends on the quality of the design of the
receiver, though. Some are susceptible to overload
and some are not. I don't know about the Yupiteru
and no one else does, either, because technical
data, including schematics, aren't available.

You have to go on someone's word....a most suspicious
aspect, really. And, of course, the Yupiteru radios
are illegal to import into the USA. This is said as
a matter of fact, just so's you know.

Back years ago, people brought in illegal "export"
CB radios by the droves. With impunity. Then all
of a sudden the FCC and US Customs cracked down and
people's heads rolled all over the place.

Something to keep in mind when opening and wantonly
discussing illegal contraband in these open, public
newsgroups where the gendarmes can read, same as you
and me. If you are going to do something, just do
it....but to talk about illegal activities in an
open forum isn't one of the best of your options.

IMHO.

The above message was written just this day.
Well, well, well. Seems our friend TheHamGuy is also Drew the Spew.
Just seems too close doesn't it? Plus it's funny how each capitalize
the first word. TheHamGuy, TheLibNet. Kind of a sick person to get
into a flame war, then use another handle, and ask the participants
to go to e-mail, even though he's one of the people in the war. Drew
Durigan, TheLibNet and TheHamGuy are one in the same. If not, I'll eat
my coax.

I'll second Kevin's idea. Even though I can't believe that this type of
tragedy would happen, I wouldn't wish it on anybody...not even Butt...I
mean Burt. My best friend was shot and killed in a drive-by shooting two
years ago. I will NEVER forget the moment when I was told what had
happened. Maybe this isn't the right place to talk about this, but maybe
Butt...I mean Burt, should get a life, and realize that this COULD actually
happen to him. What would he say then?? Would he still ridicule the
world??? I'm not saying I'd want it to happen to him, but maybe he needs
to clean the pre-mordial ooze out of his eyes and his one brain cell and
take a look @ the world.

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual. Price reduction--$125 or best reasonable
offer plus shipping.

Some nice folks advised me that this unit does not have the
original Johnson stock meter setup, but was upgraded by the owner
at one time from examining the meters in the photo.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider $125 or best reasonable offer plus shipping.

Thanks.

The following was found on the ks.misc newsgroup. Seems Spew can't go anywhere without causing problems. By the way. Since Drew is still active, why hasn't he come to this newsgroup and defended the fact that he's getting the blame for posting all the drivel from TheLidNet and TheHamGuy? If I were being accused of this, I would be back here saying it's not me. Not Drew though .He seems not to even care that he gets the blame for all the Lids postings. I think I'll leave Drew a message and tell him of the goings on. When he doesn't come back, then we will know for sure who TheLidNet really is.

On behalf of my fellow Stump-Jumpers and fellow Christians
everywhere, I apologize for the behavior of KC3AU,
otherwise known as "Brother John."

I really believe that he is working for "the other side"...
the "dark" side. Christians just don't act like he does!
He violates amateur rules, walks over the top of existing
QSO's, broadcasts, etc. He is actually turning more
people AWAY from Christ, than bringing them to Christ!

I've offered to buy this man time on WWCR or WHRI
shortwave. But his motive is clear on 14313/14300.
He is there to help CAUSE problems....not to solve
them!

For that matter, Dade Co., Florida and Miami Police use "Q" signals for
their routine police communications.

Instead of "10-20" they use the term "QTH"....instead of "10-4" to
acknowledge a transmission, they say "QSL".

Andy

3212. ACS Newsletter 5/23/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-25 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.980525143251.24280A-100000@diamond.sierra.net>
Source record: 171433

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <654>

.....
From the Editor's Desk:
Last week saw the failure of the Galaxy IV telecommunications satellite, and a lot of our pagers suddenly refused to beep, buzz or display. This was a real problem for those of us in emergency management, as we use our pagers throughout the day to keep us informed as well as in touch. I asked you as Newsletter subscribers to let me know how your agency was affected, what you had in the way of a back-up system, and what lessons were learned. Of the 150+ responses I received, I distilled the 'what pager problem' emails, and also sorted through some speculations that the outage was caused by the FBI, CIA, Microsoft or Pinky and the Brain. From what was left, I have two to share with you. These may start you thinking of ways to improve your own system.
Stay safe, everybody! See you next week! Dave Larton, Editor

Subject: Re: Galaxy IV Satellite is Down
Author: Ron Lopez at ~DPH_1540
Date: 5/20/98 1:36 PM

It seems that Fire Dept. & EMS pagers were down in San Francisco, though I don't have exact numbers to ascertain the extent of the effect throughout all city departments. Our pagers do show a "no signal" indicator (wondered what that funny little symbol that I'd never seen before was for...) so that was helpful.

Lessons learned:
1. For my organization, pagers are not mission critical. Had a large event occurred during the failure, cell phone and landline would have delayed notifications, but first response would be just fine.
2. Comm's plan should address this scenario.

3. An all-hazards (including terrorism, seismic) vulnerability
assessment of this particular communication channel should probably
get done; I don't know that it has been done. Maybe so. If yes,
please advise, especially at what level (local, state, fed).
4. Time for me to educate myself as to what (and where), if any
specific contingency planning for this scenario has occurred.

Ron Lopez, RN, CEN
Medical Specialist, FEMA USAR Task Force 7, Sacramento Fire Dept.
Disaster Specialist, EMS Section, San Francisco Dept. of Public Health
Voice: 415-554-9732 Fax: 415-241-0519 E-Mail: ron_lopez@dph.sf.ca
.....
Dave:

It seems that some of our pagers were affected differently, but I
don't understand the classes of service assigned to respective pagers
in our group, so I'm going to make a couple of educated guesses.

I work for a company that puts me on-site at other companies. During
the early portions of the outage, pager failures were detected quickly,
and within an hour of the sattelite move email was broadcast to the
service and support groups stating (I'll summarize here) that pagers
were unreliable, the failure was being investigated, and that folks
should use phones and cell phones to communicate, rather than the pagers.

Our use of pagers includes automatic systems that send text messages
to our alphanumeric pagers to report status messages (up/down) of the
network, and important system, system errors, and we also use it as a
messaging system, sending brief info via an email gateway. (A computer
on-site that dials the paging companies data terminal and send the text
to the appropriate Pager I.D., for transmission by the paging system.)

Very early in the failure, our office notced the failure, and sent email
to us, indicating pagers were unreliable, and advising folks to stay near
thier phones and email until the failure could be tracked down. We let
our office know a similar failure was happening where I was stationed.

We also noticied that we used "Airtouch", and the other company was
using "MobileComm"(sp?). Either we had unreated problems, we guessed,
our we had a major problem, perhaps at the phone company.

We later learned from the paging companies, that there was a bigger
service outage, and to "watch the evening news" for further status.

During the failure I actually recieved some pages, so I believed
that our system was working again. My diagnosis here was that my wife
was dialing the direct number for the pager, rather than calling the
data terminal, and that the Direct-In-Dial trunks perhaps go to the
local site, or use transmitters with leased lines (dedicated service)
to the local pager sites. These were numeric messages only, but they
did seem to get through before the satellite was back in position.

However, it may also be that many of our pagers have 'wide area' coverage, (Northern CA, all of CA, and some US-wide), and that some of these wider-area services are more likely to rely on the satellite links to move data from one region to another.

I'll be interested to read about other experiences. This will be a big help to all of us, as we find carriers and services that will ensure that this failure will not break the system 'next time'.

David K. Z. Harris Assistant Section Emergency Coordinator (training)
N6UOW A.R.R.L. East Bay Section
n6uow@pdarrl.org http://esperanto.org/person/HARRIS_Dacxjo
.....

>From the mailbag:

From: Dave Putnam <david_putnam@mwd.dst.ca.us>

Dave:
If you like, please include the following in your next ACS newsletter.

A few of us hams at Metropolitan Water District of Southern California are leading an effort in the water emergency management community to provide backup emergency communications on the 2-meter amateur band.

We coordinated with RACES in Los Angeles, Orange, Riverside and San Bernardino Counties as well as TASMA (Two Meter Area Spectrum Management Association) to find a 2-meter simplex frequency as our primary ham hailing channel District-wide. Out of a list of candidate frequencies, 145.77 emerged as the best choice.

Like a trapeze artist needs a safety net, we plan to use this frequency to relay emergency communications messages for water operations, and as a messaging system for other water agencies, employees, families and friends as a way to keep connected when everything else comes apart in a major event.

Beginning on June 11, our nets will be on 145.77 MHz the second Thursday of every month at 0800 hours, and we will welcome any visitors. Since this is simplex, we will usually conduct net control from a local mountain top. For times when we can't get to a mountain top, we will relay net information from station to station to give us practical experience in relaying messages.

I welcome any comments.

What's New on the Web:

DOT GOES ON-LINE WITH
HAZARDOUS MATERIALS INFORMATION

U.S. Transportation Secretary Rodney E. Slater announced today that hazardous materials and emergency response information is now available online via the world wide web at http://hazmat.dot.gov This new online availability will enable users to receive information on hazardous

materials rules and regulations, training, enforcement, publications and reports.

"Placing this valuable information on a user-friendly online system allows the department to improve on its commitment to providing hazardous materials information to those who need it most," Slater said.

"Public users, academia and the global transportation community will be quickly served by using the Internet to access valuable data on hazardous materials and emergency response information," said Research and Special Programs Deputy Administrator Kelley S. Coyner.

In 1986, the Research and Special Programs Administration (RSPA) discovered a need for public, federal, state and local government online access to hazardous materials and emergency response information. To provide this service, RSPA and its partners at the Federal Emergency Management Agency developed the Hazardous Materials Information Exchange (HMIX), a state-of-the-art, computerized bulletin board accessible by a computer and modem from anywhere in the world for only the cost of a telephone call.

HMIX operated successfully for 12 years and evolved into a well-recognized depository of hazardous materials information. Due to the expansion and growth of Internet availability, the HMIX system will be phased out by Sept. 30, 1998 and updated hazardous materials information will be placed on RSPA's Hazardous Materials Safety (HMS) Internet website.

Future innovations planned for the HMS home page include online registration for hazardous materials training courses and information for ordering safety publications and videotapes. The home page will be upgraded to accept registration for basic hazardous materials seminars conducted by HMS, and the Transportation Safety Institute, throughout the country, primarily for a small to medium-sized business.

The home page may also be expanded to establish links with the Cooperative Hazardous Materials Enforcement Development Program and other organizations providing pertinent hazardous materials safety information.

This week's EMCOMM Bulletin:

EMC133 When In Rome For release 5/25/98

(From Wood County, WVA, WCEC Newsletter 6/97, Vol 1, issue 3).

"I'm sure you've heard the saying "When in Rome, do as the Romans do" Communications specialists should do the same thing when it comes to providing support communications to another agency. If you are supplying communications to some one else, it's because their communications are overloaded or they have no communications at all. The last thing that they want to do is change the way they are operating. They already have their hands full trying to coordinate their activity without any added

problems. As a communicator you're there to help coordinate the activity and not be a part of the problem.

The best way to help is to learn what they need, and how they operate, then operate the same way they do. For instance, if you are communicating on a Public Safety radio, and to make a call, they give their unit number first and then the unit number they are calling, that is the same way you want to operate. If it seems wrong to you, remember, that's how they've been operating and they are used to it. If you try to use another format, it may just delay the communications. This has to do with any type activity, not only in communications. You want to be a part of the solution, not a part of the problem. Remember, "When in Rome do as the Romans do"."
(Information from Ken Harris WA8LLM)., Written by Duane Jones, N8LKM, Wood County, WV, ARRL EC, District EC Zone 3WV.

The same newsletter documented a case of an _exploding fire extinguisher_. "An 18 oz. foam type fire extinguisher exploded about 7:15 one morning in l997 for no apparent reason. It was dated l973 and had been sitting on a shelf in the basement at a comfortable 70 degree temperature. Still in the box it came in, it blew a two foot hole in the plaster board it was sitting by. It also tore the shelf loose from the wall. The container was split from top to bottom, and the bottom of the container was thrown across the room. The force of the explosion put a sharp gash on the edge of the bottom where it had hit something."

"The only explanation for the explosion was the possibilities of gas being created from microorganisms that may have been feeding and growing on the foam inside the extinguisher for the past several years." It was manufactured by Bernzomatic, Model FE18UL, Serial R817609, and had an UL approval. There may be other fire extinguishers which were purchased and dated the same time which may still be sitting on a shelf somewhere. This is just for information and NOT an official bulletin, but it's just food for thought." (Info from Ken Harris, WA8LLM)."

This may be ultrasonically welded together.
Try taking it to a House of Batteries (or some such) ... they know all the secrets!

Burt,

Do you still have amateur radio equipment? I sold all of mine when it
finally sunk in that ham radio was dying.

Duwayne Hick

Arkansas -- Burrheads, ballcaps, pickups & bassboats!

We're 49th in everything EXCEPT teen pregnancies...we're #2 in that
area!

#449?? You mean that there are 448 others? No way! Now I know that everyone who subscribes to this list is a decent, moral person who offers to do the right thing the first time without being forced to do the right thing. Then again, I might be a little naive in these areas.

Duwayne Hick

Dear Burt,

You're unbelievable. I do not understand how a person that professes to be a mentor and teacher of others, stoops so low as you. You have no idea of the bile and sourness that you exhibit. It has nothing whatsoever to do with bravery or cowardice. It is the blathering of a demented mind such as yours that create most if not all the problems in the world in which we live, amateur radio aside.

Your continued pointed baiting will one day do you in, not necessarily physically, as you seem to be so interested, but mentally. You will falter and eventually be a pitiful shell of a human being...and by then, you will wonder why no one has come to your aid as selective amnesia takes over your thoughts.

Your constant asking for physical attacks or threats of attacking others is not going to serve you well as you must know. We live in a time when people act impulsively at far less prodding than you have been providing. You should be learning a lesson from the reports you hear, not waving a red flag.

I'm sure you must be an honest man and do not really exhibit homosexual tendancies as some have suggested nor do I think you behave as some have posted about you and your sexual advances toward children. All those things people post about your personal life cannot be true and I refuse to believe them.

I think your continued baiting is a ploy though, because you post to many newsgroups and do not focus your energy in any area. I hope that you find true happiness one day soon and live a full and productive life without bitterness and hatred. You are a fellow amateur and human being and every person has a right to be a pain in the butt occasionally, but none of us should take advantage of that fact and make it a profession as you do.

I wish you success and mental health for your future.

7 3 and I hope to work you on HF sometime.

K4OW

Hee hee, hey Burt, here's a good one for your "What others have said" file. Mr. Wilson hits the nail on the head.

Once again the media (and other foolish types) blame an object for a crime rather than the PERSON who committed it. If the courts in this country would lock up (permanently) or execute all violent criminals the FIRST time they commit a violent crime then maybe teenagers these days would see that crime doesn't pay. And maybe parents these days should expect some responsibility from their children at a younger age instead of letting them run around like wild animals. By the time I was 13 I knew darn well what was right and what was wrong and that my parents would hold me fully responsible for my actions. Today many kids have nothing expected from them until they meet the real world and by then it is too late.

OK, How about clarifying "The Law"? Is it illegal to own a cell capable scanner, or is it illegal to *use* it? Is it illegal to own a cell modified pro-2006, or to use it? Is it legal to modify a scanner to make it cell capable? Is it illegal to publish *how-to* ifo. on modifying scanners to make them cell capable?

Bob

Yes I was confrontational in the respect I said to you on the air the same
comments I make on the internet. You on the other hand were non responsive to
those comments but on the internet where there are many more listening, your
mouth is quite filthy. Tough guy you are when you do not have to be personal.

> You are always projecting your own shortcomings onto others. Why?

You have facts to support that comment?

Huh??? How did you get "politically correct Latino sympathizer out of my lack of sympathy for you and your bigotry? I wouldn't have cared if the guy had posted in Urdu, or Quecha, or Finnish, orTagalog, or Thai, or Jitnajara. How about addressing the ISSUE, pendejo? Is the Internet an International institution, or just for us good ol' boys? By the way... what other languages do you speak, besides English, Drew? Do you acknowledge the existence of a universe outside your own country? Or maybe you just fall off the edge when you get to either coast or either border. We live in just one country out of a hundred-odd, and we speak just one language out of hundreds. If you don't understand somebody else's language, just don't strain yourself. If you don't understand ANY other language besides English, it indicates a very narrow background and education. If you don't even WANT to learn at least one other language, and acknowledge that YOUR narrow existence is not the only existence there is, that indicates a very narrow mind. I got no real problem with that, but don't you think you chould try to keep your shortcoomings and personal inadequacies to yourself?

You didn't quote me in entirety, so I will repeat what you snipped for the benefit of others.

De las bocas de idiotas, viene palabras idiotica.

And don't ridicule another person on the basis of his native language. You don't know what they might be saying about YOU. Have a nice day.

Yup. As long as this unmoderated group still exists, as long as there is still a venue for you to post your drivel, what do you care? Oh... I forgot... nobody would read your posts anymore. But hey... you can email me when you have something you want me to see. I promise to answer, too.

Don't worry, Drew... I'll still come around and give you a ration of it when you deserve it, just like I would commend you for a post I admire. I am sure you would be just as welcome as anybody else to post IN-TOPIC in a moderated group.

I noticed you conveniently ignored the rest of my question. Once more: why do you persist in following me around this newsgroup? Why do you feel it necessary to answer EVERY one of my posts, whether they involve you or not? Why do you feel it necessary to post articles like "Where did Spew go?" and "Come back Spew, I'm not through with you yet!" when I disappear from this newsgroup for a few days? Why are you SO obsessed with me that you, by your own admission, spend many hours' worth of time searching DejaNews for old posts that have been written by me or by others whom you believe to be me? This is not exactly normal behavior. Just what exactly is your interest in all of this? Please share with the class.

Send e-mail to lookup@qrz.com - if you know the US callsign.
Leave the subject line blank.
In the body of the message type lookup n7aou (for example).
You may request as many as you want - one to a line.

Bil
N7AOU

You're right, Casey. I don't really know Mr Durigan well enough to address him
by his first name.

No. You only stop talking to me when it suits your purposes. You promised you would do so yesterday, yet you continued to follow me around and comment on each of my posts in this newsgroup. Now, when I ask you to answer a simple question, all-of-a-sudden you "remember" that you promised to stop talking to me.

I asked you first, Mr Durigan. Do you speak any other languages? are you of such a small mind that you feel we Americans need not bother with it? Do you acknowledge that the Usenet is for the whole world, and so posts in other languages are appropriate if on topic?

Was I wrong to call you by your name? I will assume that is who you are, in the absence of anything concrete from you indicating otherwise.

Okay, okay. So you won't play fair and answer my questions first. I called you Drew because I assume you to be yourself. Now... I'm going downstairs to have a beer. You better get some sleep.

Your "belief" does not make it so. Under our system of justice, the accused is innocent until proven guilty. Please provide your proof.

A quick check of this newsgroup will reveal it's users to be overwhelmingly English-speaking. Therefore, use of a language other than English is considered to be in poor taste since the large majority of participants will not be able to comprehend what is being asked or stated by the poster. Understand?

>Was I wrong to call you by your name? I will assume that is who you are, in >the absence of anything concrete from you indicating otherwise.

You can call me whomever you wish. It really makes no difference to me. I was simply asking that you provide some sort of proof to substantiate who you claim me to be. Again, our system of justice provides that an accused party is innocent until proven guilty. The burden of proof is not upon me to show that I am not who you accuse me of being.

System of justice? You're not on ttrial, Drew. This isn't justice. This is just what I and practically everybody else believes. It is in line with your style of posting.

By the way, now that I have answered your question twice, don't you think you should answer mine?

The point is that the burden of proof is on your end, not mine.

>By the way, now that I have answered your question twice, don't you think you
>should answer mine?

See above. Since the vast majority of the posts here are in English, common courtesy would suggest that this be the language used on this newsgroup.

So if most "users" of this newsgroup speak English? Do you see any Spanish newsgroups for hams? Where else is he gonna post? What difference does it make to you? Poor taste to use your own language? What if he doesn't speak English? After all, you don't speak Spanish, or any other language as far as I can gather.

His post was a lot more relevant than ANY of yours have ever been. If you can't read it, ignore it. Don't be a xenophobic bozo. I think you should apologize for ridiculing the poster just because you were not able to make heads or tails of his post.

I think you were just browsing around looking for somebody to flame, and figured that guy would get no sympathy. You were on a roll when you were picking on Burt... everybody stayed off your back. Now you are messing with people who neither did nor said anything wrong. Straighten up and fly right and you will have friends instead of enemies. Be a decent human being, and drop the silly aliases while you are at it.

Hams are intelligent and are moral.

Burt

3265. GMRS advice needed for possible use with FRS

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-26 00:00:00 UTC
From: Andrew <REMOVEweslyTHIS@mail.com>
Message-ID: <356A7678.78DCCFBE@mail.com>
Source record: 171315

I have a pair of FRS 2 ways and they work good for handheld use. I'm also interested in possibly getting licensed on GMRS and setting up possible a base station or a good mobile station that I can use with FRS and maybe eventually other GMRS. Does this make sense to anyone? For example if I had a 25 or 50 watt transmitter in my vheicle, with a external antenna, I would assume this could extend the usable range of others using FRS handhelds in other cars. The greater power would obviously extend my transmission range, but I would think a good full wave external antenna would also extend the reception range of an FRS unit transmitting. Obviously I'm not a serious amateur user, but I like the FRS radios and wouldn't mind extending their functionality. If this makes sense does anyone have any specific recommendations on an affordable 25-50watt (whatever) transceiver? Makes, models, prices? Thanks in advance..

Source record: 171319

Hello !
I will soon start my operation as CT98ELP.
I'm looking for an experienced QSL manager to handle the QSLs.
As a very active DXer and contester I make a lot of QSOs, but
I don't have much time to answer all the cards!
Thanks in advance, please reply directly to my e-mail address.

You should not have to apologize for his actions. But I for one appreciate
your
honesty and thoughts. I must say I totally agree. His actions are far more
anti-christ than pro.

I find it interesting that you are the ONLY person I have heard of that has had the problem you state with the MP. I have had mine for over a year and I have certainly NOT experienced that difficulity. In fact Im presently using a Homebrew G5RV, and you know the SWR curve sucks on ALL bands except 20. I can load it just fine, everywhere, including WARC bands.

As for my opinion of the MP, I think it is the best radio presently available, regardless of cost.

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

3274. Motorola Low Band Maxtrac to Six Meters

Newsgroup: rec.radio.amateur.misc

Need Info,

I have a Motorola Maxtrac 300, 32 Ch.. low band radio (42 - 50
Mhz).
Would like to modify it to cover 6 meters (50 - 54 Mhz) i.e. add 4 Mhz
to top of band.
Need info on how to modify software to do this.
If you have this info,
post here in this news group or e-mail direct to
jc9010@injersey.infi.net
Any assistance would be greatly appreciated.

Thanks

jc9010@injersey.infi.net

>HARD EARNED MONEY)

This is about the biggest bunch of drivel I have ever read.

Everyone does NOT have the massive resources of Microsoft and Microsoft simply doesn't admit to having any errors (even to the United States Congress under oath).

I would much prefer a list of errors... and fixes... that can be downloaded from a web site (no matter how difficult it might be for me) than denial that there even is a problem. The only people that have ever sent ME notification of bugs in their software is Intuit... and they have a financial interest in not making errors in the tax returns they generate.

I have never heard from Microsoft or even IBM... but I check both sites.

If you want to see a list of errors, check out IBM's for OS/2 Warp 4 (for instance). It makes this sniveling list of 41? fixes look like the program maintenance guys aren't even working at Corel.

By the way "J." which gave you the biggest problem in the list of errors, the German "esset" or the French "acute" accent? Did the title change in 3.5.2 really improve your productivity (or at least get you out of a work stoppage). Which tables that you couldn't import before did they add with their enhancement (not fix) that really got you out of a hole. Of course, if you are editing long blocks of Japanese characters, those constant crashes must be annoying (I personally never encountered that problem with MS Word, but I don't think it handles Japanese... I know I don't).

You can save yourself a LOT of money, by waiting until perfect, thoroughly debugged software is available... you'll never need a computer.

On the other hand, if you want to lease code at multi $1000s a month, I KNOW IBM gives you far more personalized and direct support.

In the meantime, beware Microsoft, they may not even tell you of a known bug.

Ron

Curtis,

This November, when the Brady Law converts over to the Instant Registration Check, we have background checks on all firearm purchases, including rifles and shotguns. Sounds like a good deal to me. Perhaps we'll have less dead children lying around our schoolyards, and less criminal punks driving around our cities shooting random citizens.

I own several sporting firearms, and welcome a criminal background check.

Things you can do with your 440 rig after June 1

1.Take out the electronics- heavy duty center insulator
2.Let it sit there like you did while hams could use 440
3.Chat with the girl at AAA dispatch
4.Hook it to a battery- emergency desk lighting
5.Sell it to a LMRC member company at MILSPEC price
6.Radio buy back from the government ?
7.Get a linear, scramble eggs
8.Key your 2m radio, mulitply by three, make sure you're getting out
9.Use a transverter to go to the next band up on the business agenda
10.Whine that the amateur servce was robbed and why didn't everyone
write to the FCC because you were too busy

Hi the name is Lloyd, I have a sinclair model Q-202 duplexer for sale, and I am
asking $425 in Canadian funds, for those of you in the USA, that is about $277
in your money. This unit was hamified, by a pile of would be ham tech's, you
know the type, big mouth knows everything about everything, has no test equipment
only a hammer and screw drive, and will fix anything anywhere. Well this
got fixed !!

So what is the problem with it? Well some super tech's redesign the phaseing harnness
as they know more then any real engineer dose, right ? So here is the deal, I have
tested each can on my HP network analyzer and each can checks out OK with about
.4 to .5 dB of loss per can. So all it really needs is a new harness, and a REAL tech
with REAL test equipment to set it up and tune it. The $425 includes shipping as long
as it is not over $35, anything above that and you will have to pick up the extra.
I can be reached at my shop at {604} 990-4130 or by email at novatech@mail.direct.ca
And last of all NO would-be ham tech's that think all you need is a hammer and screw
driver to fix anything. Or any hams that think, gee if my FT-890 puts out 100 watts
with 12 volts DC input, what would it put out on 220 volts AC. And if you think I am
trying to be funny, you should have been here to see the rig that, that was done to in real
life !!! No joke, I had a FT-890 on my bench that was pluged into a 40 Amp stove
plug ! Now that took some real brains, or the lack of.

.

>
>Read the federalist papers. They explain it all.

Our "RIGHTS" come from God and given by him to "The People" in the USA
who in turn "loan" to our government what is needed to manage our
nation. In European and Socialist countries they believe that the
"rights" (power) comes from God and go to the King (or government) who
then loans those rights to the people (their subjects). This concept
is what makes the USA so unique.

BURY RADIO SOCIETY - LECTURE PROGRAMME 1998

The Bury Radio Society is pleased to announce its Lecture Programme for the remainder of 1998 as follows:-

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Lectures in May and June will commence at 8.00 pm but why not come along a little bit earlier and enjoy the Informal Gathering of Members from about 7.45 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

WANT TO BECOME A RADIO AMATEUR?

Well, if you do and live in 'travelling distance' of Bury, why not take advantage of the excellent Tuition offered by Members of Bury Radio Society? The Society has just completed a Course of Instruction leading to the Radio Amateurs Examination held in May 1998.

Bury Radio Society proposes to run a similar Course commencing in September 1998, with Classes at the Mosses Centre on Tuesday Evenings, leading to the Radio Amateurs Examination in May 1999. If you are interested, send a Stamped Self Addressed Envelope marked "RAE 1999" to Mike Bainbridge, Secretary, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB no later than the End of June 1998 to reserve a Place on this Course.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, where it has its own Rooms, from 7.45 pm onwards and Visitors and Prospective Members of all Ages will be made most welcome.

There is a Large Public Car Park adjacent to the Mosses Centre which is on the opposite side of the Dual Carriageway (Angouleme Way) to the Open Market in the Town Centre of Bury, not far from the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway. The Centre is fairly accessible to the Disabled. There is a very comfortable Lounge Area with a Licenced Bar which has both Soft and Alcoholic Drinks at reasonable Prices. Please ring 0161 761 2079 during Office Hours for Directions to the Centre.

3297. UK: Bury R.S. - Rally and Computer Fair 1998

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

Source record: 171351
Cross-posted to: rec.radio.amateur.misc,talk.politics.guns

What causes children to take a gun to school and blow away their classmates? Teachers who never teach anything positive about social interaction. For example, take this one under-achieving, pederast, ex-felon, ham who lives in Dennis. He is negative all the time about everything. "All hams are boring" "Gun owners kill children" "All Germans deserve contempt" This constant labelling of persons unknown to him, but only by category, is the worst kind of prejudice and bigotry there is. And it would be bad enough if he stayed home with his inbred little family.

But instead, he teaches impressionable children that it is OK to hate someone that you have never met. Bang bang. It's OK to hate a race because of a holocaust that occurred before they were even born. Bang bang. It's OK to slander, accuse and threaten people who are merely stating their opinion lawfully. Bang bang. He teaches them that ham operators, who are one of the few remaining sources of international good will among nations, should be despised. Bang bang.

These kids probably think that he is representative of all hams, and I don't fault them for not wanting to get involved with a million Burts. I wouldn't either. Even having one around is straining my sphincter.

No, he didn't do the shooting personally. He's more insidious than that (and besides, ex-felons aren't allowed to own guns by federal law, thankfully).

He preaches hate to impressionable school children and, instead of looking for something positive in their encounters and conflicts, they look for a quick, easy way out, which all too often, sadly, invloves a weapon of some kind. His cheap, below-the-belt, one-line responses to thoughtful postings presented on the net are typical of bullies. Sort of like the schoolyard reply of "Oh, yeah?!" Instead, it's more like "bang bang" and unfortunately, schoolkids think that's the way to resolve differences.

Does he ever offer anything positive to any discussion?

No.

Has he even bothered to drag his lard ass down to help administer a VE session since 1996?

No.

Has he tried to improve anything about ham radio?

No.

He will follow up to this posting, in some kind of cheap, one-line insult against the author, but not anything that is thought out at all. Just some short, trite, tired line, such as "your words speak volumes about you" or "why don't you show up at my door and we'll fight it out" or "look at the naked chick on my home page". Bang bang.

Mark my words, he will NOT offer anything positive, which although a hollow victory, proves my point beyond any reasonable doubt.

So why do people keep on replying to his poison on the internet? The same reason that people stop to look at a horrible auto accident - morbid curiosity. Or maybe they can say "There, but for the grace of God, go I."

What causes children to take a gun to school and blow away their classmates? Teachers who never teach anything positive about social interaction. For example, take this one under-achieving, pederast, ex-felon, ham who lives in Dennis. He is negative all the time about everything. "All hams are boring" "Gun owners kill children" "All Germans deserve contempt" This constant labelling of persons unknown to him, but only by category, is the worst kind of prejudice and bigotry there is. And it would be bad enough if he stayed home with his inbred little family.

But instead, he teaches impressionable children that it is OK to hate someone that you have never met. Bang bang. It's OK to hate a race because of a holocaust that occurred before they were even born. Bang bang. It's OK to slander, accuse and threaten people who are merely stating their opinion lawfully. Bang bang. He teaches them that ham operators, who are one of the few remaining sources of international good will among nations, should be despised. Bang bang.

These kids probably think that he is representative of all hams, and I don't fault them for not wanting to get involved with a million Burts. I wouldn't either. Even having one around is straining my sphincter.

No, he didn't do the shooting personally. He's more insidious than that (and besides, ex-felons aren't allowed to own guns by federal law, thankfully).

He preaches hate to impressionable school children and, instead of looking for something positive in their encounters and conflicts, they look for a quick, easy way out, which all too often, sadly, invloves a weapon of some kind. His cheap, below-the-belt, one-line responses to thoughtful postings presented on the net are typical of bullies. Sort of like the schoolyard reply of "Oh, yeah?!" Instead, it's more like "bang bang" and unfortunately, schoolkids think that's the way to resolve differences.

Does he ever offer anything positive to any discussion?

No.

Has he even bothered to drag his lard ass down to help administer a VE session since 1996?

No.

Has he tried to improve anything about ham radio?

No.

He will follow up to this posting, in some kind of cheap, one-line insult against the author, but not anything that is thought out at all. Just some short, trite, tired line, such as "your words speak volumes about you" or "why don't you show up at my door and we'll fight it out" or "look at the naked chick on my home page". Bang bang.

Mark my words, he will NOT offer anything positive, which although a hollow victory, proves my point beyond any reasonable doubt.

So why do people keep on replying to his poison on the internet? The same reason that people stop to look at a horrible auto accident - morbid curiosity. Or maybe they can say "There, but for the grace of God, go I."

Gun owners, remember this: guns are as dangerous as electrical outlets, motor vehicles, and steak knives. Train them about gun safety just like you did for those other things.

Gary,
No argument with anything you wrote, but I think Bill Blair was referring to
conflicts in 2 sources concerning refraction in the atmosphere. The ARRL
Antenna Book (p. 23-3 in my 17th edition) cites an increasing "atmospheric
bending" with frequency. I've been meaning to look around for other
references, but have been off on other tangents. 73,
Bill N3WK

Look at the ISOTRON by Bilal Co. (1-719-687-0650) Ask for there catalogue.

They make a good antenna for a low price. I use them, they work great. A 20 Meter Antenna is only 21" long X 8" wide X 4" tall,,,,,,,,,,, there 40 Meter is 15" deep X 16" wide X 22" high. Try to beat this for size.

>
>Does anybody know the formula to calculate the distance in km bettween two
>coordinates?
>
>73 de Juerg, HB9ECV
>
>
>
>

Sure, Juerg.

cos D = sin L2 X sin L1 + cos L2 X cos L1 X cos DLo

where D = distance in Nautical Miles,

L1 = your Latitude

L2 = Latitude of the other location (if it is a different name, N or S,enter a negative number)

DLo = difference in Longitude. If the two Longitudes are the same name, subtract and use the ablsolute value. If they are different names, add them. If DLo is greater than 180, subtract 180.

You will have to convert your answer to kilometers. A nautical mile is 6060 feet. This might sound like an odd figure until you understand that a nautical mile is roughly equal to one minute of Latitude or one minute of Longitude at the equator.

Also, you will be converting degrees and minutes to degrees and decimal parts of a degree. Simply divide the minutes by 60 and add that to the whole degrees.

An easy way to calculate distances is to use a LORAN, DECCA, or GPS. Any GPS and almost any LORAN or DECCA unit is capable of calculating distance and bearing. Make sure you set it to compute for Great Circle rather than Rhumb Line. This calculation is awkward for someone not used to doing it on a calculator, and errors are easily made. You can easily write a simple program to perform this calculation for you if you don't want to buy a GPS and don't like the cumbersome number-crunching method. There are also lots of Navigation programs that will solve distance/bearing problems.

Hope this is what you are looking for.

Ex felon? Teaching school? They must not be too picky up there in the Land of Ice and Snow. I don't think a convicted felon can teach school here in the Great State of Texas. What did you do, Burt... tear the tag that says "DO NOT REMOVE UNDER PENALTY OF LAW" from your mattress? Cheat on your taxes? Drive on the sidewalk one time too many? Hold up the paper boy?

That fits right in with one of the things I have said, IF it is true that Burt did a boo-boo and took a felony fall... criminals don't like it when honest people have guns.

BTW... is it true? If you are falsely accused, Burt, I apologize for referring to the felony thing. Fair is fair.

The ux-14 is an interface device to add a serial control capability to the Icom ic-271 and ic-471 radios. It is no longer available from Icom.

I need up to 6 of these for a group of Australian hams. If you have one or more please contact me.

Has anyone ever cloned this device? Having never seen one I am not sure what is involved.

thanks. ron long w8gus.

I hate to give out jamming techniques, as eventually somebody somewhere
will use it improperly, but if data signals are lawful on that frequency, most
data signals are really FSK or FM, and with a powerful enough signal,
capture effect will occur. I say no more!

I feel like an outsider!

I also get the feeling that Drew, Burt, PorkChop, FatBoy, etc are all part of some good ol' boy network here on rec.radio.amateur.misc AS WELL as 75 meters.

Can I join in the fun? Will you accept me as one of your own? I don't want to feel left out by such a group as yours.

Duwayne Hick [of the Arkansas Hicks]

ARKANSAS --

Q: In Arkansas how are a tornado and a divorce similar?

A: In either case, someone's gonna lose a trailer.

>Never seen a newsgroup so full of continious flame wars as this one, with
>the possible exception of soc.culture.china after the Tianamen Square thing
>a few years back.

Newsgroup names for an RFD?
Better add:

rec.radio.amateur.flame.code-rules
rec.radio.amateur.flame.code-sucks
rec.radio.amateur.flame.bert-sucks.bork.bork.bork
rec.radio.amateur.flame.bert-rules.go-bert-go
rec.radio.amateur.flame.blow-me.bert.die.die.die
rec.radio.amateur.flame.ham-usenet-gods
rec.radio.amateur.flame.arrl-sucks.die-fossils-die
rec.radio.amateur.flame.arrl-rules
rec.radio.amateur.flame.technicians-rule
rec.radio.amateur.flame.technicians-suck.die.die.die

Lets not forget:

rec.radio.amateur.flame.band-plans.rule &
rec.radio.amateur.flame.band-plans.suck

For completeness and political correctness we need:

rec.radio.amateur.flame.old-white-men.rule &
rec.radio.amateur.flame.old-white-men.suck

And the number one suggestion for a new usenet group:

rec.radio.amateur.somebody-please-shoot-berts-computer.reward.reward.reward

I think that covers all the major bases...

All suggested with tongue-in-cheek, and the comradship all amateurs
profess to each other in mind. <grin>

3321. More Drew as a bigot

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-26 00:00:00 UTC
From: boss@mindspring.com
Message-ID: <356a10ba.206452314@news.mindspring.com>
Source record: 171453

These posts are from Drew's days as CBRAMBO. He harassed this group for months and denied being Drew. In fact, if you read one post, CBRAMBO responds to someone calling him Drew, then talks about moving to Kansas from Orlando. Drew did in fact move from Orlando to Kansas. Now, we move on to a post where Drew has a dislike for Blacks and Mexicans. The post speaks for itself. When someone says Drew is a redneck, he calls them "sympathizers of Blacks and Mexicans", then calls them "criminals". These posts are only the tip of the iceberg. The posts are in order and come from Deja News. CBRAMBO went on and on how he wasn't Drew. Check out the posts and you'll see that Drew is in fact: CBRAMBO, Azraelboy, Abner Boyd, JamTheHam, TheLibNet, TwinsRadio and God knows who else. The language and writing are all the same.

>"overpower" the reciever? I'm thinking for now any of the Radio Shack
>antennas like the discone or the smaller ones.

I use a PRO-2003, a PRO-2004 and two PRO-2006 scanners. I get adequate results when I use the telescoping whips, but I've found that ANY antenna is better than those! The 2006's each have a set of $19 K Mart rabbit ears. I've heard 30 MHz skip on both of them as well as 2x 15 MHz shortwave images. The PRO-2004 uses a Radio Shack all-band mobile whip, the one with the two loading coils. The PRO-2003 has one of those funky RCA jacks in the back, and it uses a broken down mobile whip. At times it seems somewhat more sensitive than the 2006, which sits on top. The 2004 and other 2006 are at a different location.

For mobile use, I have a PRO-51 handheld. Attaching any external antenna other than the rubber ducky sometimes causes overload if I'm in the city. Using the Radio Shack mobile from above, I was able to hear the local dog catcher on 158 MHz at a distance of about 65 miles. The local police on a 453 MHz repeater system were heard out to about 50 miles or so.

If you've got the room, by all means, put up an external antenna. I have sometimes used a magnetic mount mobile antenna hung upside down with the base clamped to the top metal frame of the window.

I believe Mr. Cheek is in error. The restriction on cellular capable or easily modified to be capable scanners only addressed those units manufactured or imported for sale. Thus the scanners would not in themselves be illegal nor would importing or building one for one's personal use be illegal. This distinction might be lost on a Customs person but if you read the act I think you will find it is true. OTOH using you scanner in a manner contrary to the ECPA is illegal unless of course you are a democrat.

Q Signals converted to ENGLISH

QSY-Quit Sending Youngster-I've been licensed since 1939, get the hell off my net frequency or I'll turn on the Alpha 87 and burst your ear drums.

QTH-Quit That House-you may QSL but I have moved three times since I last updated my address

QSL-Quick Send Loot-If you do not include 5 dollars or six IRCs you will not receive my card. I don't care about yours, I DX for profit.

QRM-Quit Ruining Me-You're making my 3000 buck DSP rig sound bad

QSB-Quit Signaling Buster-I'm actually being more rude than I think. I can't hear a damn thing you're saying but I copy you fine.

QRZ-Quit Repeating Zones-I hear you calling me but since I have worked your zone 33 times I am ignoring you.

Visit a ham radio store, you will see-

1.Nothing made in the US
2.Radios that cost more than your kids' cars
3.The bad effects of U.S.-Japanese reconstruction, see the trade imbalance multiply every Saturday, 9-5 Closed Sundays
4.Grown men cry
5.Marriages straining
6.At least one large man sitting around showing his HT to anyone bored enough to look
7.The effects of nicotine on used radios first hand
8.People buying the only products other than cars which when defective you have to keep and can't return
9.Employees who have less of an idea how to demonstrate a new radio than you do
10.Radios that come in boxes with so much styrofoam you wonder about number 8

Grandfather clauses don't outlaw cell capable
scanners before April, 1994. I can't interpret
the law for after....... You'd need a lawyer.

> Is it illegal to own a cell modified pro-2006,

It sure would seem not. It's "grandfathered"....

> or to use it?

Use what? The cell capability? Yes, that's illegal.
Since 1986, no less.......

> Is it legal to modify a scanner to make it cell capable?

Apparently not for private owners. The FCC has said they
were coming after commercial concerns that did it, but not
individuals.

> Is it illegal to publish *how-to* ifo. on modifying scanners to
> make them cell capable?

You can publish information on how to make atom bombs.
Information, so far, has few if any legal constraints.

3333. Atlanta Repeaters. Which are the best?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-27 00:00:00 UTC
From: kb9rpd@aol.com
Message-ID: <1998052700253800.UAA10661@ladder03.news.aol.com>
Source record: 171267

Hello,

I am travelling to Atlanta Thursday. I am trying find which repeater(s)
have the best long distance coverage of the North Side of Atlanta.

I found the following repeaters:

145.41 W4PME
145.47 N4CLA
147.015 N4GIS
147.06 N4CLA
146.82 W4DOC
145.35 W4FGQ Lookout Mountain - is this near Kennesaw?
146.76 KS4QA Lookout Mountain

Thank you,

73, Ted KB9RPD

Actually, there was a case recently i.e. in the last 2 months), in
California, where a (former) University of California student (at
either Riverside or Irvine, can't remember which) was convicted of
criminal harassment for repeatedly sending threatening emails to other
students. I can't remember all of the details, but the story
shouldn't be difficult to find.

Check out <http://www.artscipub.com> Look at the repeater map pages and
select the state you want to know about. The best thing is that it's all
FREE!! Some of the repeaters aren't listed for my state (Alaska) but, they
WILL take updates if you send them in.

Ya know, what amazes me most about this is that there are 103 messages in this thread and I don't think ANY of them have to do with rec.amateur.whatever in the least. Why not take this whole discussion over to another news group so they can be bombarded by this drivel. This thread is just like every one that talks about code vs no-code. Everybody has opinions but, at least they are related to the group topic.

GIVE IT A REST!!!

That or someone please write a small program so that my server doesn't have to waste time sorting thru items like this. While you're at it, how about being able to filter out certain users that start threads like this... They know who they are and I am NOT pointing this at the originator of this particular part of the thread... I've just had ENOUGH!!

If we spent this much effort in writing to senators and congressmen, maybe we wouldn't be losing the 440mhz frequencies to outside interests...

There, that's all I have to say about this subject. Sorry to take up your time...

No Driving International wants a world where testing components like manual driving are eliminated from the testing requirements for a driver license. NDI would like to see an end to this antiquated testing component as we head into the 21st century. GPS can be found in
several vehicle models this year and that number will grow. NDI would also like to see a reduction in the number of technical questions found on the driving exam, such as "what do you do when a fire engine approaches in an oncoming lane ?". As autopilots and radar sensors (rental Winnebagoes have them already) are becoming commonplace why take up the testees time with technical little things such as "what do yo do if your car skids on ice ?". Hey, most people don't ever see ice, until
it's too late anyway and they cause an accident. But that's why you have insurance, except if you're in New Hampshire (Live Like Me or Die).

>Bill N3WK

Ok, I just read that paragraph. I don't see any justification for it given. As far as I know, the equations for refraction in nonconducting mediums don't have a frequency term. Feynman shows that Snell's law is a consequence of Fermat's least time principle as expressed using the calculus of variations, and the frequency doesn't enter into it, just the relative propagation velocities in the two mediums. And propagation velocity isn't a function of frequency. For neutral air, it's a function of density (which in turn is a function of temperature and moisture content as well as height).

I think the Antenna Book author may be confusing ordinary refraction with ducting. Ducting does have a frequency dependent component due to the waveguide beyond cutoff effect. Or perhaps he's confusing it with forward scatter, which also has a frequency dependent component. Ordinary refraction is what extends the radio horizon beyond the geometric horizon, and as far as I know, that extension is not frequency dependent.

Bob,

I use a Skyscan wideband outdoor antenna on my Yupi 7100 - it's pretty essential really. You will onlu overload it if there's a powerful transmitter next door. It is a very good scanner, a lot of people here in UK use them and usually say they are as good as the AR8k without the features. I read the whole of that thread you started because I am visiting the US in a couple of weeks and I want to bring my Yupi with me. No, I don't want to listen to drugs deals and radio phone-in contestants on 800Mhz like most of you guys seem to want to, but I would like to know what kind of hassle to expect from US customs.

Ken

Ken,

Unless you give them reasonable cause to search your bags, you should
have no problems taking the scanner with you into the US. A lot of people
in the US own a Yupi 7100 as well.

I've been using WordPerfect since 1984 and would certainly disagree with
what he has to say. It's by far the best word processor I have ever used
(I just installed the Linux version of WordPerfect 7.0 yesterday, all 77
megabytes!)

What does this have to do with the rec.radio.xx groups anyway?

Source record: 171291

I have some NOS GEC TT 22 valves in stock. This is a transmitting
valve with a 12.6V heater and a topcap for the anode, but insite it is
a real KT 88. Due to the anodecap, it can handle 1250V.
This valve is now very scarce, and it has always been very expensive.
I have been told that the current price here in Norway was about
NOK 5000 - or about US$ 670.-!!

You will have to pay about US$ 65.- at Billington in England for a
decent USED (but tested) one. I'm asking only US$ 70.- each for new,
unused.
E-mail me if you are interested.

Once and for all: owning a cell-capable receiver is legal. Modifying one may be illegal. Offering info on modification is legal. Listening to cell frequencies is illegal. However, the risk of prosecution for the casual eavesdropper is nil, none, nada. If you record cell conversations and then publicize them, then you hit the jackpot. End of story.

There is no doubt that he would have killed them any way this NICE
LITTLE BOY was found to have at least 3 bombs that were made out of
common household items that are in almost every house. But we can
eliminate this problem by banning or at least registering and having a
waiting period on these every day items or maybe ban ar register the
knowledge. What do you think? Ban or register every chemistry book and

teacher in this country and make sure we include an import ban on all common household material that could be combined in some manner to create a bomb. How does this sound?

What are you basing this on? There are laws currently on the books that are not being obeyed, only a fool or a liberal could believe that adding another law would accomplish anything. Our current legal system teaches that people do not need to accept responsibility, we always want to blame SOMETHING not SOMEONE. The BRADY law has accomplished nothing at all except spend tax payer's money. Our yellow SOB (Clinton) claims that it has kept handguns out of the hands of 400,000 felons, however nothing backs up his claim not even his administration's doctored reports. Under the Brady Law it is a crime for a prohibited person to attempt to buy a handgun. Try and find out how many felons were charged with this crime. We have more than enough laws on the books now, what is needed is REAL deterets. Jail should be such a terrible place that no one would ever want to be sent back. Murders should have the death sentence carried out within 6 months maximun and not be allowed the grow old and die of old age before the sentence is carried out. PUNISH THE CRIMINALS NOT THE LAW ABIDING PEOPLE

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background

check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

Dear Madam/Sir,

We are interested in your company's opinion about the use of your
radiocommunication system. Please respond.

1) Your company is interested / performed in which method of
communication ?
___ Satellite / Digital Network
___ FM
___ AM
___ SSB
_x_ CW

2) Your company's opinion about the speed of communication:
___ Internet is the most
efficient and the fastest
___ Digital Sattelite system "
___ Analog "
_x_ CW "

3) What is the percentage of the employees who know about the ham
radio ?
___ 0
___ Less than 5%
___ 10%
___ 25%
_x_ 100%

4) What is the percentage of the employees who know the morse code ?
___ 0
___ Less than 5%
___ 10%
___ 25%
_x_ 100%

5) The use of cellular phone (employees) in your company...
___ is permitted
___ is not permitted if it is in analog
___ is not permitted if it is in digital
_x_ is not permitted because one can use the radiowave
without knowing the morse code.

6) If you are a shortwave listener, what do you listen to most often
?
___ Broadcast

___ Military
___ Air Traffic
___ Marine
_x_ Amateur CW

7) What is your opinion in general about your radio system ?
___ is great because everything is in digital and in
satellite
_x_ is sucks because it does not have CW keyer

8) The radio communication should be done in the way:
___ portability
___ cost effective
_x_ know CW and sit down in shack alone and punch CW key

3378. RF from 80M setting off my smoke detector

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-28 00:00:00 UTC
From: Steve Meserve <stevenme@microsoft.com>
Message-ID: <6kjp8s$8jp@news.microsoft.com>
Source record: 171223
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I'm using an 80 meter dipole, center insulator (not a balun) feed with RG-8X, which runs through my attic (but no closer than 20 feet from the smoke detector in question) on it's way to the dipole in my backyard. The problem seems to occur at certain frequencies (above ~3850mhz but not below). When I transmit I set off my 2nd floor smoke detector. Note that the 1st floor detector is not set off!

I believe this must be a common problem, what can be done to get rid of this problem? I'd rather not alter the detector, but will if I have to. Thanks in advance,

These posts are from Drew's days as CBRAMBO. He harassed this group for months and denied being Drew. In fact, if you read one post, CBRAMBO responds to someone calling him Drew, then talks about moving to Kansas from Orlando. Drew did in fact move from Orlando to Kansas. Now, we move on to a post where Drew has a dislike for Blacks and Mexicans. The post speaks for itself. When someone says Drew is a redneck, he calls them "sympathizers of Blacks and Mexicans", then calls them "criminals". These posts are only the tip of the iceberg. The posts are in order and come from Deja News. CBRAMBO went on and on how he wasn't Drew. Check out the posts and you'll see that Drew is in fact: CBRAMBO, Azraelboy, Abner Boyd, JamTheHam, TheLibNet, TwinsRadio and God knows who else. The language and writing are all the same.

If I have wrongly accused you of being CBRAMBO, TheLibNet, racist and moron, then you have only one choice. Sue me. Get yourself a lawyer and have at it. But I'm sure the only reason you don't is that you know it could be easy to prove with the right records from AOL. By the way. How many people have you harassed with your account from work, Drew A. Durigan, drew@mix103fm.com. I may have to find any of those posts too for future use. I wonder why Drew himself hasn't been here to defend himself? It's funny how a message left for TheLibNet was answered by Drew himself on the ks.misc group. You know and I know your a liar and a racist and a phony. I have proven my point, slime.

3383. W8MMQ/RSCM NEWSWIRE-5/28/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-28 00:00:00 UTC
From: "Daniel Hicks, Jr." <w8mmq@hotmail.com>
Message-ID: <356D788A.20092767@hotmail.com>
Source record: 171228

May 28, 1998
Target: rec.radio.amateur.misc

Please note: This news bulletin is available via email. Simply write w8mmq@hotmail.com and ask to be placed on our weekly mailing list. Thanks!

Welcome to the W8MMQ Wire for Thursday, May 28, 1998. This newsletter is the official news source for the Radio Society of Central Michigan. It is issued once weekly, and is designed to bring you the latest news and information that is affecting the amateur community.

For news and information as it is issued, visit the W8MMQ Wire, on the web at http://w8mmq.ml.org/news.htm. If you have any news or information to contribute, please send it to us!

In this issue, we will have an update on our proposal to the FCC; WB8BGY has been appointed the ARRL Great Lakes Division Vice Director; amateur radio has been excluded from a new bill to enforce the citizen band; and much more!

The RSCM Petition to the FCC
==========
As stated last week, the Radio Society of Central Michigan has written a Petiton for Rulemaking, and submitted it to the Federal Communications Commission.

In the Petition, we ask the Commission to declare the amateur radio service a "co-primary" user of the 70-cm band. This is, of course, a counter to the recent Land Mobile Communications Council request for the Commission to immediately reallocate the 70-cm band from federal to Private Mobile Radio Service use.

The Petition, co-authored by Bill Houlne, WB6BNQ, would allow the government to continue to use the 70-cm band as they do now, but would change the amateur radio status from secondary to co-primary with the government.

We are hoping that this Petition will receive a rulemaking number, at which time, we would encourage all of you to write the Commission in support of it.

WB8BGY New Vice Director
==========
George Race, WB8BGY, has been appointed the new ARRL Great Lakes Division Vice Director. The position has been vacant since March, when Joseph Falcone, N8TI, resigned his position as Director, and Dave Coons,

WT8W, took his place.

Race held the position of Director from 1995 to 1998, so he is not new to this work. Any amateurs wishing to contact Race can do so via his email address, wb8bgy@arrl.org.

Dayton Hamvention 1998 Update
==========
As reported last week, Dayton Hamvention officials are calling this year's hamfest a great success. An estimated 30,000 amateurs attended the event. Some have said that attendance was down this year from last, but that sales were up.

Among the major vendors, HF gear seemed to be more popular this year, especially the new "black-box" receivers, which are computer controlled shortwave receivers.

Antennas were also popular this year, with new models introduced by Bencher, Cushcraft, Diamond, and others.

For more information on the Hamvention, including news and information on the 1999 Hamvention, visit their web site at http://www.hamvention.org/.

Amateur Radio Excluded from CB Bill
==========
Amateur radio has been excluded from a bill that would allow state, city, and other local governments to enforce federal regulations on the 11-meter citizen band. Currently the bill is before the US Senate.

The original bill, Senate Bill 608, was introduced nearly two years ago by Wisconsin Senator Russell Feingold. He introduced the bill as a result of complaining of heavy interference, and the Federal Communications Commission's failure to take action. After Senator Feingold met with the American Radio Relay League, the bill was amended to exclude amateur radio.

Haller Comments on the LMCC
==========
Ralph Haller, a former FCC Private Radio Bureau chief, says that he supports the LMCC's recent actions, regarding seeking additional spectrum for the Private Mobile Radio Service, but he feels that they should look somewhere other than the 70-cm amateur band.

In a recent issue of The ARRL Letter, he notes that there is plenty of space available between 225- and 400-MHz. He also says that if things went his way, he would seek spectrum from the federal government, not the amateur community.

Haller indicated that these frequency "fights" only go to show that the amateur radio community has a good ability to gather support when it is threatened. He says that the hams take these challenges personally.

Faulty Satellite Causes Problems
==========
The heavily-used Galaxy 4 satellite failed Tuesday, May 19, causing major disruptions to pager services and television and radio stations across the country.

The satellite's onboard control system and backup switch failed, causing it to lose its orientation to the earth. Instead of relaying signals back to Earth, it began sending them into space.

Technicians were able to send commands to the craft, but could not reestablish its proper position in orbit.

It is estimated that nearly 90 percent of the nation's pagers were affected by this failure, as well as television and radio stations, as they were unable to receive feeds from the satellite for their broadcasts. Many stations began switching to backup and alternate satellites to receive their signals.

PanAmSat, the company that owns the Galaxy 4, says that it will be repositioning the Galaxy 6 satellite to take the place of the failed craft's orbit.

This Weekend in Contesting
==========
For complete contest information, be sure to visit the ARRL's Contest Corral at http://www.arrl.org/contests/.

The CQ WW WPX Contest, sponsored by CQ Magazine, will run from 0000-Z May 30 until 2400-Z on May 31.

The QRP TACTical Contest, which is sponsored by the QRP Society of Central Pennsylvania and the EPA QRP Club, will run from 1800- to 2400-Z on June 6. Operate CW and QRP only.

Thank you for reading this issue of The W8MMQ Wire. Please feel free to pass this bulletin on to others.

For more information on the Radio Society of Central Michigan, and how you can become a member and/or an affiliate of The Society, visit our web site at http://w8mmq.ml.org/rscm/.

If they are the same style detectors, try swapping them to see if the
'problem' remains on the second floor -- or moves to the first floor.

Source record: 171232
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.cb

Hi,
I am trying to rig up an external PTT switch and a mic to a handheld
CB radio. I am looking at UNIDEN/Radio Shack and Maxxon models. On
radioshack I have found that it has a 2.5 mm mic jack which is also the
PTT. How do I activate the PTT. I would like to keep an isolated push
button switch to activate PTT and talk into the mic.
On searching the web I found that there are some circuits for
connecting TNC in ham radios but those require the mic to be powered
externally and I dont want to do that.
Is there anyway I can get the wiring diagrams for connecting an external
mic and PTT switch.

Thanks,
Jay Samuel

What part of "80 meter dipole" didn't the spelling police understand?

Did any of the SP folks bother to mention that you should be using a
balun to keep the RF off of your feedline? Using a balun usually has
the added benefit of improving the radiation pattern of your antenna.

3389. Re: Why is Drew Durigan , KF4DDM a racist?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-28 00:00:00 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <356D903B.C8B03BD0@innocent.com>
Source record: 171234

The title of this thread, "Why is Drew Durigan , KF4DDM a racist?" is really unanswerable by anyone except the much-maligned Drew (assuming he exists), who I do not know.

It is peculiar, this extremely self-referential spat between the "Casey" character and the numerous individuals he accuses of being "Drew." The question naturally arises: "Why should anyone care about any of this?" Especially since no real ideas are usually being discussed, which might make it interesting.

But the title of this thread contains an implication that being a "racist" is something wrong or dishonorable in some way.

That is certainly not true.

The founding fathers of the United States, for one example, were certainly racial separatists to a man, and were generally far more radical on the subject than, say, David Duke. As was Abraham Lincoln.

Also, all healthy races, which intend to survive in a tough world, certainly put the interests of their respective races first, and organize along racial lines for their own self-interest. Jews, Blacks, and Mexicans -- to name only three groups -- do this openly and unashamedly.

It is only the dim-bulb Whites, who, for some reason, are credulous enough to believe the "we are all the same" drivel that sprays from the bought pulpits and cathode ray tubes controlled by the billionaire media elites.

And the very worst cases of brain death are evidenced by those who _actually believe_ that to call someone a "racist" is a form of condemnation. To those who, despite the Telavivision, have retained full neural functions, being called a "racist" is like being called "intelligent."

With happy Spring wishes,

Kevin, WB4AIO.

About a year ago I purchased an serial adapter from a website and cannot find that site again. I lost/misplaced the instructions for connection of the four wires to the rig. If the owner of the site should see this or any one that may have purchased one also, please get in touch with me butchkay@netdoor.com

The serial adapter has 25 pin male with din plug at other end and a din plug plugs into that and it has standard phone cord from there to rig, black, red, yellow and green. I must have tossed the instructions and hope one of you guys can help me out.

tnx, Butch KF5DE

Odds are good that your best bet is to ask someone else on the repeater;
procedures vary between clubs. Still, if you plan to use it a lot, you might
consider joining the club to help support the repeater's operation.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various agencies (is this legal in itself) to the point that a National Firearm registration program will be attempted. This does not pertain to new guns alone as if you take in a gun for repair a background check is supposed to be ran on you.

How do you feel about a law that was ruled, at least in part, as un-constitutional being beefed up to suit Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

They are both the same kind of detector (pre-installed in a new home), I think the difference is the distance from the RF. BTW, they are AC powered which may give the RF another path to travel.

you need a switch that is like the one in your mike. You have to switch the recv off and transmitt on and vice versa or you can cause it to sqwil.. just find a switch out of another mike for that radio and look inside the one you have and wire it the same way.

color codes don't have to match but the connections to the proper pins in the end does. just use an OHM meter to trace the wires to the pins and to the right spots on the mike switch and solder them in one by one.then you'll have it made

.> I am trying to rig up an external PTT switch and a mic to a >handheld CB radio. I am looking at UNIDEN/Radio Shack and >Maxxon models.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

SB QST @ ARL $ARLB038
ARLB038 ARRL asks ULS changes

ZCZC AG38
QST de W1AW
ARRL Bulletin 38 ARLB038
From ARRL Headquarters
Newington CT May 28, 1998
To all radio amateurs

SB QST ARL ARLB038
ARLB038 ARRL asks ULS changes

The ARRL has expressed overall support for the FCC's wide-ranging rulemaking proposal to implement the Universal Licensing System (WT Docket No. 98-20). But the League also suggested several changes to the plan.

In comments filed May 21, the League supported deleting the application process for non-US hams to operate in this country. But the League says the FCC should impose a one-year time limit on such operation or at least be consistent with CEPT and CITEL requirements. The ARRL took advantage of the opportunity to urge the FCC to authorize visitors from certain European countries and the Americas to operate during short visits to the US. The League also said the new rules should require non-US ops to have their license document in their possession while operating in the US or its possessions.

In the same vein, the League's said it would ''object strongly'' if the FCC stopped issuing license documents to hams. The League said it's often necessary to prove that one is a licensee. It cited amateur protections under state and local scanner and antenna laws, as well as requirements to produce a license for overseas operation. The FCC's ULS proposal did not suggest eliminating license documents, but the League said it's heard ''repeated staff references'' to the notion, and added that the proposed rules ''contain nothing that would continue to obligate the Commission to issue license documents.''

The League also discouraged the FCC from adopting a proposal to turn over issuance of club and military recreation licenses to private, third-party administrators. ''The task is of a minimal nature and does not justify the creation of a cumbersome, multiple-administrator system that requires real-time coordination

among the multiple administrators.'' The League said that the current system works well and should be left in place.

The League suggested changes for the new multiple-service FCC Form 605, slated to replace the venerable Form 610 when the ULS is adopted. The League said the new form makes it ''inherently more cumbersome for the amateur licensee to determine which portions of the Form are to be used and which may be disregarded.'' Certain items that were not in the old Form 610 ''should be deleted for amateur applicants,'' the ARRL said. Also, the League urged the FCC to retain a standard physician's certification for a medical exemption from the higher-speed Morse Code requirement.

The ARRL questioned the requirement for applicants to supply a Taxpayer Identification Number (TIN)--typically a Social Security Number--if they are not participating in the vanity call sign program, which is subject to a regulatory fee. ''Many radio amateurs are concerned about disclosing their Social Security numbers without assurance of the necessity therefor and without assurance of confidentiality,'' the League's filing said. ''The Notice offers very little of either.''

The League also said the FCC should not make electronic filing mandatory as of January 1, 1999, as the FCC's Notice proposes. The League said electronic filing is not yet available to all applicants and the requirement ''would certainly disenfranchise some.''

A copy of the League's comments to the FCC is on the ARRLWeb page at http://www.arrl.org/announce/uls-cmt.pdf.

I figured a balun would be the recommendation. My reasoning for not using one has to do with my experience with one on a 10m dipole. Basically I was unable to get an swr of less than 1.5:1 anywhere on the 28mhz band. By removing the balun and using a center insulator I was able to get a 1.1:1 across a decent segment of the band, and 1.5:1 or less across the entire band. Maybe I just have a bad balun?

If you're up to it -- swap'em. If the problem *does* move, then the
one giving you fits may be 'flakey'.

: BTW, they are AC powered
: which may give the RF another path to travel.

Ferrite beads on the supply wires *may* help.

: I think the difference is the distance from the RF.

Probably so. The previous suggestion to use a balun/choke at
the antenna feedpoint is well taken. But, rf overload is rf
overload -- no matter how perfectly the antenna is being fed.

I assume that the 2nd story smoke detector is supplied by a
100vac line running across the attic. Perhaps re-routing
this -or- placing it in properly grounded conduit would help.

"ALL ADMONITIONS ABOUT WORKING AROUND 110VAC POWER LINES APPLY."

Hi

Some models of AC powered smoke detectors have an additional wire
that can be ties together with other smaoke detectors so thay all go
off together. I do not know the spicifics about wether the tie line
goes high or goes low on alarm, I am not even sure if it is ac or dc
signaling. I have seen news group posts talking about shelding or
bypassing this line becouse it was sensitive to rf. It was too long
ago for me to remember details.

If you can you should contact the consumer affares person at the
manufacture of your smoke detector for addvice. I would keep a writen
copy of there recominded fix along with your insurance policy. You do
not want any argument about compromised effectivness.

I would argue vary strongly aginst any do it yourself modes without
guidance from the OEM. Correctly working smoke detectors are a major
life saver.

Burt - do I interpret your last response as saying that any and all CW prosigns are fine on phone *except* "HI HI"? Apparently that must be the case since you haven't denied using "CQ" on phone.

You can't have it both ways - either the prosigns are fine for voice, or they're not - no exceptions. Either "CQ" and "HI HI" are both okay for phone, or they're not.

$6 if you can honestly say that you've never said "CQ" on phone.

Now, I compared internet to land-line TTY, not RTTY. Do you know the difference? Apparently not, for you mentioned "QRM" and "QRN" - none of that occures on LL TTY. The prosigns that you've read (that's *read*, not *heard*) here on the NGs were permitted on the military LL TTY circuits. That you're bothered by reading them hear will surely be a sufficient reason for me and others to continue using them.

Well duh, but until we come up with some way to force all parents to be more responsible, a law is all that we can really do.

my basic thought--product sold recvs- year 1990--now 1998-
fcc says no more products sold-a unit was pulled from the market
that can perform the function-just before the law changed. PRIVACY
law not writtren.-they dont won't
you to recv..personanly thought of it as--freedom of the press--the
control is on the seller of product--yes there is a place that sold
a modification book--covered most--not sure of new--have the
address but have to find. I work on scanners--now if you was
listening in on the pres-c..and monica--starr will get you.

VINTAGE FIELD DAY!!

Plan now!

Last month Barry announced the date - the weekend of June 13/14. This month after receiving input from a number of people, I'm announcing the rules. There was considerable opposition to the idea that VFD should be a contest, so we've deleted that part of it. Instead, we'll print reports from as many stations as we can fit into the August issue. The reports should consist of station logs (with all the usual information), descriptions of equipment used/power source/antennas, etc and of course we would like photos. Reports must be submitted to arrive here no later than July 15. Jim Hanlon, W8KGI, will be producing an article on the event and extracting material from the reports sent in. The rules are pretty darn basic: The event starts at 7 pm local time on Saturday, June 13, and ends at 7 pm local time on Sunday, June14. Incidentally, the first FD held back on the weekend of June 10/11, 1933, used the same starting and finishing times. All stations participating in VFD must use vintage tube-type equipment, operate CW or AM and fullfill the following, taken from the original 1933 rules, "Only portable stations, actually in the field, away from home addresses are eligible to submit field day scores". QST will have a mention of our VFD in their May issue and I'm asking everyone with a website to help publicize the event. Let's hope this VFD is a big success. Barry Wiseman, N6CSW

Get yours while they're available. Why ?

1.ARRL needs more dough since most no-code techs didn't join (whoops)
2.All hams do is go in circles- it's an easy device to master
3.Play Frisbie when the hobby dies
4.Cook your pizzas and pies on it
5.Reflector for 2.4 GHz portable use
6.Because the information isn't available in 8 other ARRL books, their web, the FCC web, manufacturers webs and about 300 hams' webs.
7.Magic marker + Circular Frequncy Chart = Fun for the youngsters
8.You can get slightly more use than a standard bullseye
9.Hang above birdfeeders to keep squirrels away
10.Cut a hole, use as a durable visor

Radio Shach unable to help.
Recently purchased a HTX-202 on the net and it came with a beautiful box, but not the original (I believe they utilized stiff cardboard) packing insert where the radio, antenna, ni-cadd pak and AA pak and manual would have been secured for shipping. As a collector, I do enjoy having my items kept in their proper containers when not in use for extended uses.
Anyone, out here have what I need? I would be willing to purchase the box as well if required. I feel everything could be properly flattened and sent in a large manilla envelope of the 8.5" X 11" variety, then re-assembled once here.
I would pay a reasonable price to anyone who has these items, in near mint to mint condition who is not interested in the packing material and so forth. Please, write with full condition, price and any other details I may need to contact you.
Thanks
Ray Miller N2NJK

What if last winter's Olympic Games had been held in Arkansas ---

16 -- Doves released during opening ceremonies
are promptly shot by the crowd and sold as
concession snacks.

15 -- Little Rock's most famous strip
club, "Peek-a-Boo Street", forced to change
its name.

14 -- In an amazing coincidence, every proposed
Olympic venue turns out to be owned by Hillary
Clinton.

13 -- The Big Event? The 100m Sisterchase.

12 -- No snow + No ice = Skiing through
10 inches of grits and skating on fresh
bacon fat.

11 -- Instead of shooting at boring targets,
biathletes take aim at muskrats and ATF
agents.

10 -- Olympic officials attempt to pass off
LeAnn Rimes' frantic yodeling as a medley
of all the different national anthems,
"includin' all them new Russian ones!"

9 -- Metal detectors replaced with ringworm
detectors.

8 -- Teary-eyed awe of seeing Olympic Flame
burn is replaced by teary-eyed "hyucks" of
seeing Vern light his own gas.

7 -- Urine drug test magically transformed
into "Distance Pissing Competition."

6 -- Olympic Village replaced with Olympic
Trailer Park.

5 -- Awards of gold, silver and bronze medals
replaced by awards of gold, silver and
bronze teeth.

4 -- Curling now merely one part of the
"Big Hair" competition.

3 -- Opening Ceremony reduced to Roger
Clinton with a Skynyrd tape and a trunk
full of bottle rockets.

2 -- Hometown favorites falter in ice skating
competitions due to all them extra toes.

AND the Number 1 Way the Olympics Would
Differ if Held in Arkansas...

1 -- Two words: Billy Bobsledding

JOKE --

Q: How can you tell that Clinton is NOT really
from Arkansas?
A: He has all of his teeth and can read!

3432. The G1KZI online guide to UK FM Repeater stations

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-28 00:00:00 UTC
From: Nick Lansley <usenet@lansley.demon.co.uk.nospam>
Message-ID: <896347517.2048.0.nnrp-06.c2de030e@news.demon.co.uk>

Cross-posted to:
alt.ham-radio.vhf-uhf,alt.radio.amateur,alt.radio.scanner.uk,demon.homepages.adverts,rec.radio.amateur.misc,uk.radio.amateur

Now available online: The G1KZI guide to UK FM Repeater stations.

The data for 6m, 2m, 70cm, and 23cm repeaters has been compiled from various sites on the web, and a dynamic HTML page allows you to sort and filter the detail to give you a complete interactive guide to repeater stations including callsign, channel, repeater Input/Output frequencies, CTCSS information, Location, QTHR and Latitude/Longitude.

To reach the site, head to http://www.lansley.demon.co.uk and follow the links to the amateur radio pages.

To use this interactive guide you need to be using Microsoft Internet Explorer 4 web browser, as the page uses IE4's built-in Tabular Data Control, plus Dynamic HTML and VBScript to give you complete dynamic control over sorting and filtering.

You can use the dynamic page and data file offline in IE4 by downloading a zip file and unpacking the file into repeater.htm and repeater.csv. You then double-click on repeater.htm to start your IE4 browser. Remember to return to the site from time to time to pick up updates to repeater.csv .

If you do not have IE4, you can download and view repeater.csv by importing it into a database or spreadsheet application. Again, remember to return to the site from time to time to pick up updates to repeater.csv .

Enjoy!
Nick Lansley G1KZI

3434. Re: RF from 80M setting off my smoke detector

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEtp33x.HDx@netcom.com>
Source record: 171119
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Maybe replace the RF-ed smoke detector with one of a different manufacturer? Odds are the design will be enough different to not be as prone to RF in the same environment.

Maybe a few clip on ferrite cores on the AC feed wires? Or a 0.01 at 1.4KV disc ceramic across the AC feed wires? I would NOT attempt to modify the detector itself.

"I wish I were an Oscar Myer weiner, so I could tell my girlfriend to eat me!"

3435. Casey Thrower (N4GKS) causing trouble on other newsgroups (was: Re: Dear racist Drew)

>If I have wrongly accused you of being CBRAMBO, TheLibNet, racist and moron,
>then you have only one choice. Sue me. Get yourself a lawyer and have at it.

Be careful what you ask for, Thrower. You just might get it. Not from me, necessarily, but possibly from one of the many others whom you have repeatedly libeled online. Remember, your full name and address has been confirmed and is a matter of public record via your amateur radio license.

>But
>I'm sure the only reason you don't is that you know it could be easy to prove
>with the right records from AOL.

Really? Exactly which "records" are you referring to, and just how do you rpopose to go about obtaining these "records?"

>By the way. How many people have you
>harassed
>with your account from work, Drew A. Durigan, drew@mix103fm.com. I may have
>to
>find any of those posts too for future use.

Go to it. Since you obviously have lots of time on your hands to waste doing this and your "Drew fetish" compels you to continually make a priority out of scrutinizing his every move, let's see what The Great Detective Thrower can come up with this time.

> I wonder why Drew himself hasn't been here to defend himself?

Because you're not worth his time. Haven't you figured that out yet? You're but a single small pimple on the face of humanity, Thrower. Insignificant. Annoying and a nuisance, but not worth investing any real time into eradication efforts.

> It's funny how a message left for TheLibNet was
>answered by Drew himself on the ks.misc group. You know and I know your a
>liar and a racist and a phony. I have proven my point, slime.

Sorry, Thrower. It is you who is the liar. I went to ks.misc to see what kind of trouble you have stirred up there. You specifically went after Drew by name and posted a bunch of your usual cut-and-paste garbage in a deliberate effort to disrupt the flow of the newsgroup. Drew responded a couple of times, then elected to ignore you. Proof again that he considers you unworthy of his time. Really, Thrower, don't you have anything better to do besides following Drew around and attempting to cause problems? Must really suck to be you. Or your

wife, for that matter.

M.Baker wrote: "Q.E.D. ... (for all you hams out there, that's an abbreviation for a Latin phrase, not a Q-signal so put the Handbook away)."

And if you knew what it meant (quod erat demonstrandum), you would have said more than it's "...a Latin phrase..."

Also, if you were licensed, then you'd know that hams don't use Q-signals prior to QNA (maritime operators' Q-collection begins with QRA).

Actually, anyone who has taken at least a high school geometry class has seen "Q.E.D.", for it marks the end of each and every proof.

This Week in Amateur Radio

To:&#65533; All This Week In Amateur Radio Affiliates
From: W2XBS/TWIAR World Headquarters
Date: May 28, 1998
Subj: TWIAR Up-Link Changing this week.

This week edition (#270) of This Week in Amateur Radio will be
uplinked
on MONDAY JUNE 1st AT 9pm eastern.
This change is for THIS WEEK ONLY.&#65533; You will still need to locate us
on SBS-6 until the W0KIE satellite network settles into its new home
on another transponder on SBS-6. When this happens I will let you know
under seperate cover.
IMPORTANT:
PLEASE DO NOT AIR ANY AUDIO FROM THE SATELLITE THIS SATURDAY MAY 30TH.
IT WILL NOT BE AMATEUR RELATED PROGRAMMING. THE NETWORK IS FILLING THE
TIME WITH OTHER PROGRAMMING WHICH MAY INCLUDE MUSIC ETC.
THIS WEEK IN AMATEUR RADIO EDITION #270 WHICH IS NORMALLY UPLINKED ON
SATURDAY (MAY 30th) WILL BE UPLINKED ON MONDAY JUNE 1st AT 9pm
EASTERN.
THIS IS A ONE TIME ONLY CHANGE. OUR NORMAL SATURDAY UPLINKS WILL
RESUME
NEXT WEEK WITH EDITION #271.
This one time change will allow me to attend the Atlantic Division
Convention and Hamfest in Rochester NY.&#65533; Perhaps I can find some new
gear to help improve our audio quaility.
Thanks for your understanding and if you have any questions, please
feel
free to e-mail or call.
I will be resending this reminder again tomorrow night.

3440. Help! Repeator Controller Question..

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: Acct 345 <pyramidx@wave.home.com>
Message-ID: <356E5C8C.A52DBADD@wave.home.com>
Source record: 171125

Hi all:

Just curious.. I am seeking information about a repeator controller which was recently damaged. The Microcontroller went on us, can we just replace the Microcontroller, or doe a Microcontroller have to be programmed, or something? Just curious if anyone knows anything about this. We would like to know if we can just order the Microcontroller, and replace it ourselves, or does it require programming of some sort?

Microcontroller is: MOTOROLA XC68HC16Z1CFC16
(or MC68HC16Z1CFC16 is a replacement I think)

Also, the part is very old, and we are having troubles trying to find it being sold individually.. anyone heard of a place that would sell this? Or anyone have a working one?

Thanks for your help everyone..

3441. ALINCO DJ-5CT MODS

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: rj3@earthlink.nospam.net
Message-ID: <356e3775.623681@news.earthlink.net>
Source record: 171126

To the person who asked... The simple Alinco mod. allows you to receive 118 - 173 Mhz. and 390 to 473 Mhz.!!

The DJ-5CT is the easiest mod I have seen in a long time.....

Just take off the back cover, (3 phillips screws, and cut the red wire loop.. (The only red wire loop..) Put the cover back on and reset the radio....

(Hold down MW and FUNCTION while turning it on..That's it!

Rick.. N1QQ

3442. May 30 New England balloon launch/ W1AW is HF net control

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: h1riley@umassd.edu
Message-ID: <356e3d48.0@gatekeeper.umassd.edu>
Source record: 171127
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

SkyQuest 2 Radiosonde

A ham radio equipped weather balloon will be launched between
1:00 and 1:30 PM EDT (nominal 1:15 PM), unless adverse weather
interferes, from the upcoming National Weather Service Open House
on May 30 in Taunton, Massachusetts (southwest of Boston). In case
of a postponement, we'll try Sunday, May 31. Sponsored by the
Plymouth Community Intermediate School, Roger Perry, earth science
teacher. Additional assistance from the NWS.

The SkyQuest hamradiosonde can be heard on home scanner radios and
VHF ham radios on the 2 meter band at 145.61 MHz FM. It should
be *real* easy to hear all over eastern Massachusetts, Rhode Island,
southern New Hampshire, and northeastern Connecticut. After gaining
some substantial height I hope amateur radio operators with more
sensitive receivers will be able to hear the radiosonde from as far
away as southern Connecticut, New York, New Jersey, Vermont, northern
New Hampshire, and Maine. Maybe even parts of eastern Canada at peak
altitude.

HF net control starting 1:00 PM Saturday on 3.860 MHZ from
1.5 kilowatt W1AW in Newington, CT.

Two temperature channels (inside and out) and altitude will be
measured continuously by means of audio tones. Going up and down
in frequency as the transmitter switches among the three channels,
the tones will be heard for the duration of the flight.

Some basic information is available at the North American
balloon launch website (listed below), but a better way to keep up
with developments (exact launch time, weather forecast, expected flight
track, reception tips, etc.) is to email me with a request to be added
to the SkyQuest email list.

I have had problems with RF turning on my motion detection outside lights. I bypassed them using .01 caps. Solved the problem completly. You might just give it a try on the smoke detector. Use 3 of the things. One across the black and white wire, one from the black and white to ground which would be the green wire. Even though your white wire is grounded, it and the green wire still can act as antennas. The caps short this whole thing out as far as RF is concerned. Just make sure the caps have a rating 1400 or 1500 volts. 600 volt jobs are real common, but you are really pushing your luck using them. They could pop and start a fire.

I know I am going to regret this, but here I go: boy, if this guy is not the late great CBRambo, he must have been separated at birth. Same tone and pseudo-intellectual babbling as the departed CBRambo. As for libel: silly person you'll be waiting years just to get heard. The courts still haven't figured out whether malicious and untrue statements made on the internet are libel, or slander. Besides, are you willing to travel from your state to the alleged libeller's state to pursue a lawsuit? Can't extradite in civil cases, I'm sure you know, and can't file in your state, it wouldn't do any good, your opponent's assets aren't located there, and you can't compell a civil defendant to travel out of his county, much less inter-state, to answer a suit. And last of all, a bit off topic, but I encourage all radio amateurs to do as I have and use a different address with the FCC than your residence, for obvious reasons.

Japan decided to eliminate analog TV broadcasting by the year 2010
(everything will be in digital).
The radio broadcastings are partially now in digital as experimentally
basis.

The historical analog and CW method will be likely only used by
amateurs...

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

ARLP022 Propagation de K7VVV

ZCZC AP22
QST de W1AW
Propagation Forecast Bulletin 22 ARLP022
From Tad Cook, K7VVV
Seattle, WA May 29, 1998
To all radio amateurs

SB PROP ARL ARLP022
ARLP022 Propagation de K7VVV

Solar indices were down this week, as they have been during the past few weeks. The sunspot number is half what it was the previous week, and the solar flux was down over 16 points. So far this month the average flux is running about the same as April and March, when it took a jump of about 16 points over January and February.

Solar flux is expected to peak over the next two days (Friday and Saturday) at 98, then drift to 96 on Sunday, then go below 90 after June 7. Flux values should drift above 90 around June 18 and to the mid-nineties in the week prior to the end of June.

During June we will be experiencing more summer-like HF conditions, with weaker daytime signals and higher noise due to increased thunderstorm activity in the northern hemisphere. With less hours of darkness and more storms, look for poorer conditions on 160 and 80 meters. Although 20 meters has been the best DX band around the clock, there is a good chance that solar activity will move higher this summer, and 15 meters could become the best daylight band for the season.

There was a solar flare during early hours UTC on May 28, but it is not expected to affect geomagnetic indices. About 12 hours earlier there was some activity that could cause a rise in geomagnetic activity on May 30 or 31. Look for very quiet geomagnetic conditions around June 9-13 and possibly on June 15 and 18.

There were a couple of errors in last week's bulletin ARLP021 regarding VHF openings. Concerning W1LP and an opening on six meters, it was really a two meter tropo opening. Also the W1JJM report of EA7 and CT3 signals was for ten meters, not six.

For this week, WA5JCI in Texas reports the best tropo openings in years, when he worked several Gulf Coast states, and then heard

Mexico on a local two meter repeater. Also, N0JK in Kansas worked a number of Gulf Coast and Midwest states on 2 meter tropo, and heard KT4AL in Florida on 432 MHz.

Sunspot Numbers for May 21 through 27 were 29, 26, 47, 41, 57, 49 and 49 with a mean of 42.6. 10.7 cm flux was 89, 87.4, 90.3, 95.6, 92.3, 92.5 and 94, with a mean of 91.6, and estimated planetary A indices were 14, 8, 13, 16, 15, 8, and 7, with a mean of 11.6.

3455. Re: Hardee's against big antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: heath_filtered@s2i2.com
Message-ID: <09980429064634.OUI58.heath_filtered@s2i2.com>
Source record: 171140

Sounds like they were making a joke.

Here in CA, USA the highway patrol got upset recently when they were used in a commercial by the PUC. They were the butt of a joke that was so absurd, only people of IQ 70 or less took it serious. (Not that there is anything wrong with that.) I thought that the protesters made the whole bunch look like a bunch of dweebs.

So who made the highway patrol look worse; the PUC or the protestors?

I would like to see that commercial and laugh myself silly over it.

>> Hardee's ad..

shows 4 houses...
1 house has a large antenna...
rain cloud floats by over head...

inside, the guy says "See Honey, a larger antenna is better!"

lightning strikes the large antenna, house crumbles to ash around the charred couple..

burger ad starts....

ARE WE GOING TO LET THEM GET AWAY WITH PROMOTING THE IDEA THAT THERE'S SOMETHING INHERENTLY UNSAFE ABOUT LARGE ANTENNA SYSTEMS??

ARE WE?? <<

3458. FS: Collector's Premium Quality Millen Grid Dip Meter

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6kn3t7upi1@nnrp1.dejanews.com>
Source record: 171143

Collector Premium Quality Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA., U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit is like new and is in amazing condition! See Photo. It even has the original box, packing and manual with it. One lucky person apparently sold a unit for $325 in this super condition and I have seen them for $65 as well in decent condition.

Candidly, this meter is priced for either a collector or someone who wishes to pay a premium to have one in new extraodrinary cond. in the original box and not the operator who just could use a meter. Again, similar models in lesser condition can be had for well under $100 if simple utilitly alone is the objective.

Will take best offer between $160 and $175. Due to the amazing condition of this unit cannot consider offers less than $160. This is a rare find. Will also consider some type of swap for a Hickok Navy or Air Force military 118 cardmatic tube tester.

Thank you.

F I N A L L Y !!!

Someone who knows what they are talking about. Well done, Wil!!
All this litigation BS is thrown around by a bunch of ANGRY [but
powerless] nitwits. Wil, you did leave one thing out of your
response...the "I'm going to get you in trouble with your ISP"
routine. Let's see now, how many times has that ineffective stunt
been tried? Almost as many times as the "I'm calling my lawyer"
routine. Get smart...the lawyers aren't interested in your silly
little flame wars. There's not enough money involved to interest
them!! If the participants had any real assets, then they would
probably NOT be hanging around on this newsgroup during the day.

This whole situation sounds a lot like grade school, only the
participants are a lot older and grumpier! Sounds a LOT like CB used
to sound in the 70s.

ZCZC AG39
QST de W1AW
ARRL Bulletin 39 ARLB039
From ARRL Headquarters
Newington CT May 29, 1998
To all radio amateurs

SB QST ARL ARLB039
ARLB039 Sen Barry Goldwater, K7UGA, SK

Former US Senator, onetime presidential candidate, and noted radio amateur Barry Goldwater, K7UGA, died May 29. He was 89. Goldwater had suffered a stroke in 1986 and had been in failing health.

A staunch conservative, Goldwater was the 1964 Republican presidential nominee and served five terms in the US Senate. He also authored the book Conscience of a Conservative. Goldwater retired from politics in 1986. His home was in Scottsdale, Arizona.

As a Senator, Goldwater's legacy included several pieces of Amateur Radio-related legislation. In 1964, Goldwater's bill to allow reciprocal operating agreements between the US and other countries was signed into law. It was his work on the bill that prompted the Arizona Senator to renew his interest in ham radio after a long absence.

Goldwater's 1964 presidential campaign tried to tap into his ham radio connections with a ''Hams for Barry'' fundraising effort. He took time out of the campaign to address the ARRL National Convention in New York City, on the occasion of the League's 50th anniversary. In his remarks, Goldwater reminisced about his youthful foray into Amateur Radio as 6BPI. He was first licensed in 1921, and joined the ARRL in 1923. ''You can't imagine what a relaxation ham radio is for me,'' the campaign-weary Goldwater told the gathering. He related how, during the GOP Convention earlier that summer, he'd made several hundred contacts from his hotel room using a borrowed Collins S-line. The convention presented Goldwater with a certificate of appreciation for his work on behalf of the hobby (see QST, Oct 1964, p 80). Goldwater lost the 1964 election to Lyndon Johnson.

While serving as chairman of the Senate Communications Subcommittee in 1981, Goldwater introduced landmark legislation proposing several changes to the Communications Act affecting amateurs. In 1982, Congress finally approved and President Reagan signed what came to be known as the Goldwater Amateur Radio legislation, enacted as Public Law 97-259. The measure established the Amateur Auxiliary and the volunteer examination programs, permitted 10-year license terms, and exempted Amateur Radio from the secrecy provisions in the Communications Act. The Goldwater bill also ended years of Congressional wrangling and authorized the FCC to set RFI susceptibility standards for home electronic devices.

A year later, President Reagan signed into law a bill including a Goldwater amendment that allowed the recovery of costs in the Volunteer Examiner program (the FCC didn't authorize the plan until months later, however).

At one point in his ham radio career, Goldwater operated as K3UIG from his Senate office and as K7UGA when he was home in Arizona. He called his Arizona ham shack ''bash-hal-ne-ae,'' which he said was Navajo for ''music from iron'' or ''metal that talks.''

Goldwater was a life member of the ARRL. He was elected president of the Quarter Century Wireless Association in 1971. A pilot during World War II, he held the rank of General in the Air Force Reserve and was an active member of Air Force MARS. During the Vietnam War era, Goldwater handled hundreds of thousands of phone patches. He also held a pilot's license and occasionally operated aeronautical mobile.

In 1983, Amateur Radio paid homage to Goldwater as ''its governmental protector and advocate'' by establishing the $5000 ARRL Scholarship to Honor Barry Goldwater, K7UGA. In announcing the scholarship, then-ARRL Washington Area Coordinator Perry Williams, W1UED, said that Goldwater's Amateur Radio involvement had ''brought joy to thousands of members of the armed services stationed overseas, and through his professional career, he has exemplified the principles of commitment and service to one's country and fellow citizens.''

Then-FCC Chairman Mark Fowler said the Amateur Radio community was lucky to have Goldwater as its ''elder statesman'' in government and noted that the FCC often had Goldwater review ham-related proposals before it took action on them.

The Goldwater scholarship, administered by the ARRL Foundation, is awarded each year to a deserving radio amateur to encourage a spirit of achievement and dedication in the field of communication.

ARRL Executive Director David Sumner, K1ZZ, said that of amateurs in the public sector, Goldwater was ''without peer.'' Southwestern Division Director Fried Heyn called Goldwater ''a super ham'' who was ''concerned about the future of Amateur Radio.''

Goldwater's first wife, Peggy, died in 1986. The couple's two sons and two daughters and Goldwater's second wife, Susan, are among his survivors.

> BTW, they are AC powered
>which may give the RF another path to travel.
Hello Steve,

That's the answer I was expecting and hoping for. Buy one of the cheaper, battery operated smoke alarms and mount it temporarily very near the one that's giving the problem. I'll bet that the battery operated one will not be false alarmed.

The point of this exercise would be to determine that the AC powered alarm is probably getting its trigger from something coming in over the ac lines.

Another corellation is the fact that the problem is frequency dependent. You may have found a frequency region where some part of your house wiring is resonant. Once you have decided the RF on the ac line is the culprit, you may have to use some RF chokes, bypass capacitors, etc., on the AC line, right at the smoke alarm, to snub the RF and keep it out of the smoke detector.

Well, Duh...

We already have more than 20,000 pieces of legislation governing firearms.

We already have laws that prohibit minors from owning firearms or using
them unsupervised.

We already have laws that make murder an illegal act.

Some people still murder, some minors still posess and use firearms, some
people still break these laws.

Why will people treat a "new law" any differently from the current laws?
The law abiding will abide by it. The criminals won't, just as they ignore
the current laws. What is this new law supposed to do, protect us from
those who would never dream of using their firearm (except in
self-defense), or protect us from the criminal element in our society? If
it's latter, then it won't work, as is evident by the fact that criminals
don't obey the laws now.

3474. Looking for Robert Baker, Torrance, California

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: "Terrence R. Redding, Ph.D." <terry@oltraining.com>
Message-ID: <356F1936.B8101BB3@oltraining.com>
Source record: 171159

I had an electronics teacher at Torrance High that made a difference in my life. I have often wondered what happened to him. His name was Robert (Bob) Baker and he taught for only one year (1964).

I would be interested in hearing from any of the students from his class. I believe four of us became active in amateur radio.

Thank you

73 Terry W6LMJ

The following has probably never been said in this newsgroup: If the feedpoint impedance of your dipole is around 75 ohms (as it should be) and you are using a 1:1 balun and 50 ohm coax, the SWR at resonance (as seen at the typical "50 ohm" rig) will be 75:50 or 1.5:1.

Ok, maybe that has been said here before. ;)

Your antenna will be working just fine like this, and the radiation pattern will be more uniform by using the balun. Instead of trying to put a bandage on the problem by dealing with the smoke detectors, it makes more sense to try to cure the disease causing the problem in the first place. You might try putting the balun back up there and seeing if the problem goes away. When you removed the balun from your 10m dipole before and the SWR magically reduced itself, what was really happening was that your feedline had just become a part of your antenna. Depending on how long the radiator and feedlines were, getting your rig to see a 50 ohm load should not be much of a problem. This is not the way to go, however, and can lead to RF getting into places where it doesn't belong, especially with your coax traveling through your house. You want the antenna to do the radiating, not the coax.

The problem with high SWRs is more related to solid state equipment having to reduce output power to protect it's components than having a useful antenna. You didn't mention what kind of rig you were using, but if your rig has an automatic antenna tuner, it is probably capable of handling SWRs as high as 3:1. This should be more than sufficient for you to maintain full output and use a dipole with a 1:1 balun across an entire band. If you don't have an antenna tuner of any kind, your antenna should still work just fine. The only "problem" might be some reduced output from your rig if it doesn't like the load it is seeing. There probably wouldn't be enough of a difference to notice anyway.

Hello. I've been wondering what exactually the requirments are to get a U.S. MARS/CAP license. Because I know that many United States Ham Radio operator have them and I was wondering what is needed to get it. Also, how would one go about getting a license? And also, what goes on on the MARS/CAP bands, meaning what are they used fo? Thanks a lot for reading and any help is appreciated!

3480. Marine Radio License

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-29 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <6knaa8$s7i$7@clarknet.clark.net>
Source record: 171165

Hello. I've seen that Radio Shack sells 2 (one handheld and one mobile/ship model) Marine radios. Well, I noticed that they didn't mention anything about having to have a license to operate them (as they usually do). So I checked the FCC web site and they said that as long as you own a private ship, you don't use it for business purposes, and you obey all of their preset rules for the frequencies then you can use them.

Here's my question. You see, I have a base station on land that I use for all of my other radio communications. I was wondering if it would be a violation of FCC rules/regulations to use a marine radio at my base station (which is located about 20 miles from the nearest body of water) to communicate with boats using the band, for personal purposes. Could I do this? Or does the FCC specifically prohibit it? Thanks a lot for reading, any help is appreciated!

E-mail via SSB radio link???
I have a friend who sets off in September around the world (on the RAFYC jaunt I think). He will take his school age kids who are going to continue their studies remotely via e-mail link.
He is looking for ways to get e-mail links via SSB radio from mid Ocean - any ideas chaps?
His Radio is Icom M710 SSB. (State of art I think).

When in port, he plans to use the Compuserve network for local call access (sounds OK to me - I did the same three years ago). Any better ideas there?

Sometimes the less said, the better. However, I do know what it means -- "as has been shown". By the way, I believe that the Latin is actually "quo est demonstrante". However, it has been awhile since Latin in 8th & 9th grade.

> Also, if you were licensed, then you'd know that hams don't use Q-signals
> prior to QNA (maritime operators' Q-collection begins with QRA).

Sigh, why do hams on this newsgroup always seem to feel the need to throw "if you were licensed" into a discussion as a putdown ? Some sort of insecurity showing ? Yes, I'm licensed......WA3ZXO Advanced Class since 1976, and 1st Class Radiotelephone w/Ship Radar Endorsement (now GROL) since 1974. I'm sorry I don't always remember to put the obligatory call letters on each posting to this group. I'm not sure if the factoid about valid Q-signals is covered under the current test pool questions, but it is a critical piece of knowledge nonetheless.

Kevin Alfred Strom (kevin.strom@innocent.com) wrote:
: But the title of this thread contains an implication that being a
: "racist" is something wrong or dishonorable in some way.
: That is certainly not true.

Kevin, my Webster's dictionary defines "racism" as "any program or practice of of racial discrimination, segregation, persecution and domination". So "racism" is not just a set of beliefs, but more an active practice.

So of the various types of racism practiced by white people in the past century, which types of "persecution and domination" do you support? Laws forbidding racial intermarriage? Seperate "white" and "colored" drinking fountains? Certainly not genocide, I hope.

In my opinion, the racist acts of whites in this century are indeed wrong and shameful: lynch mobs, murders of Civil Rights workers, the Holocaust, etc. (Are you a Holocaust "revisionist" also? I've got a Jewish friend who lost dozens of her Polish ancestors in the Nazi death camps: the murder of millions of Jews is a historical fact.)

: The founding fathers of the United States, for one example, were
: certainly racial separatists to a man, and were generally far more
: radical on the subject than, say, David Duke. As was Abraham Lincoln.

Where in their great documents like the Constitution, the Declaration of Independence or Lincon's Gettysburg Address are their "radical" views of racial seperation?

: And the very worst cases of brain death are evidenced by those who
: _actually believe_ that to call someone a "racist" is a form of
: condemnation. To those who, despite the Telavivision, have retained full
: neural functions, being called a "racist" is like being called
: "intelligent."

Kevin, living in culturally diverse California, I've known many different races and religions of people. In my observations, no one group appeared to be more intellectually or morally superior.

In my observations, a predisposition to crime and violence has far more to do with one's family and background. A poor white person born to an unstable family of missing parents, substance abuse, criminal relatives, and with no encouragement for education and achievement, will be just as likely to become involved with crime and violence, as will a person of another race.

So: why exactly do you feel that white people are superior? I respect your opinions, so kindly return my respect and not use the langauge of your previous posting by calling me a "dim bulb white" or dismissing me as being "brainwashed" by the media, or refering to me to 10+ http links that I don't have time to read.

>
> Bob:
I own a 2045. Picked it up at RS on a clearance sale and ordered the
optional CTCSS board. I'm not sure I understand your question.

The 2045 is a 200 channel triple conversion receiver that includes the
military air band and has lots of neat features besides CTCSS capabilty. It
has a data skip function that works well. It has an attenuator that can be
programmed for individual memory channels. There is a weather alert function
(for those who want to be blasted out of bed to warn of an impending
overnight
storm ;-) and a counter that keeps track of "hits" on active channels.

At it's original price of $349, it might have been a bit pricey but for
$149 (price is now lower-if you can still find one) I think it was a
bargain IMHO.

SEN BARRY GOLDWATER, K7UGA, SK

Former US Senator, onetime presidential candidate, and noted radio amateur Barry Goldwater, K7UGA, died May 29. He was 89. Goldwater had suffered a stroke in 1996 and had been in failing health.

A staunch conservative, Goldwater was the 1964 Republican presidential nominee and served five terms in the US Senate. He also authored the book Conscience of a Conservative. Goldwater retired from politics in 1986. His home was in Scottsdale, Arizona.

As a Senator, Goldwater's legacy included several pieces of Amateur Radio-related legislation. In 1964, Goldwater's bill to allow reciprocal operating agreements between the US and other countries was signed into law.

It was his work on the bill that prompted the Arizona Senator to renew his interest in ham radio after a long absence.

Goldwater's 1964 presidential campaign tried to tap into his ham radio connections with a "Hams for Barry" fundraising effort. He took time out of the campaign to address the ARRL National Convention in New York City, on the occasion of the League's 50th anniversary. In his remarks, Goldwater reminisced about his youthful foray into Amateur Radio as 6BPI. He was first licensed in 1921, and joined the ARRL in 1923. "You can't imagine what a relaxation ham radio is for me," the campaign-weary Goldwater told the gathering. He related how, during the GOP Convention earlier that summer, he'd made several hundred contacts from his hotel room using a borrowed Collins S-line. The convention presented Goldwater with a certificate of appreciation for his work on behalf of the hobby (see QST, Oct 1964, p 80). Goldwater lost the 1964 election to Lyndon Johnson.

While serving as chairman of the Senate Communications Subcommittee in 1981, Goldwater introduced landmark legislation proposing several changes to the Communications Act affecting amateurs. In 1982, Congress finally approved and President Reagan signed what came to be known as the Goldwater Amateur Radio legislation, enacted as Public Law 97-259. The measure established the Amateur Auxiliary and the volunteer examination programs, permitted 10-year license terms, and exempted Amateur Radio from the secrecy provisions in the Communications Act. The Goldwater bill also ended years of Congressional wrangling and authorized the FCC to set RFI susceptibility standards for home electronic devices.

A year later, President Reagan signed into law a bill including a Goldwater amendment that allowed the recovery of costs in the Volunteer Examiner program (the FCC didn't authorize the plan until months later, however).

At one point in his ham radio career, Goldwater operated as K3UIG from his Senate office and as K7UGA when he was home in Arizona. He called his Arizona ham shack "bash-hal-ne-ae," which he said was Navajo for "music from iron" or "metal that talks."

Goldwater was a life member of the ARRL. He was elected president of the Quarter Century Wireless Association in 1971. A pilot during World War II, he held the rank of General in the Air Force Reserve and was an active member of Air Force MARS. During the Vietnam War era, Goldwater handled hundreds of thousands of phone patches. He also held a pilot's license and occasionally operated aeronautical mobile.

In 1983, Amateur Radio paid homage to Goldwater as "its governmental protector and advocate" by establishing the $5000 ARRL Scholarship to Honor Barry Goldwater, K7UGA. In announcing the scholarship, then-ARRL Washington Area Coordinator Perry Williams, W1UED, said that Goldwater's Amateur Radio involvement had "brought joy to thousands of members of the armed services stationed overseas, and through his professional career, he has exemplified the principles of commitment and service to one's country and fellow citizens."

Then-FCC Chairman Mark Fowler said the Amateur Radio community was lucky to have Goldwater as its "elder statesman" in government and noted that the FCC often had Goldwater review ham-related proposals before it took action on them.

The Goldwater scholarship, administered by the ARRL Foundation, is awarded each year to a deserving radio amateur to encourage a spirit of achievement and dedication in the field of communication.

ARRL Executive Vice President David Sumner, K1ZZ, said that of amateurs in the public sector, Goldwater was "without peer." Southwestern Division Director Fried Heyn, WA6WZO, called Goldwater "a super ham" who was "concerned about the future of Amateur Radio."

Goldwater's first wife, Peggy, died in 1986. The couple's two sons and two daughters and Goldwater's second wife, Susan, are among his survivors.

DECLARATORY RULING REQUEST MISHANDLED AND MISUNDERSTOOD, LEAGUE SAYS

The ARRL says its request seeking an FCC declaratory ruling affirming the value of band plans was mishandled by the FCC and misunderstood by the amateur community. In comments on RM-9259 filed with the FCC in May, the ARRL says it never intended to propose any changes to the amateur rules, and its request should not have been treated as a rulemaking petition.

The ARRL said it does not dictate how bandplans are developed and was not asking to make specific bandplans mandatory or to accommodate certain uses to the exclusion of others. "Exactly the opposite is intended," the League's comments declared. "Voluntary bandplans should be voluntary, and adherence to them should remain voluntary."

The League said its only goal was to have the FCC interpret and clarify the scope of "good amateur practice" as the term is used in Part 97 of the Commission's rules. It wants the commission to affirm--as the then-Chief of the Private Radio Bureau did in 1983--that, "given the widespread acceptance of band plans in the Amateur Service, operation not in harmony with those plans, which results in interference to other amateur uses, is not good amateur practice."

The ARRL reiterated that voluntary bandplans that enjoy general acceptance and adherence among hams are "indispensable" and a keystone to self regulation.

The FCC's handling of the request as a rulemaking petition "has caused confusion in the amateur community, the League said. "This misunderstanding has led commenters to presume that to grant the request would provide absolute authority on the part of the League or to volunteer repeater coordinators" to decide bandplans with the force of rule, the League said. "Not so," the League's filing said. "Nothing gives voluntary band plans any more force or effect than is afforded by the amateur community that accepts, rejects, or modifies them."

The ARRL's comments conclude by again asking the FCC to issue a declaratory ruling stating that "'good amateur practice' anticipates compliance with

accepted, voluntary, international, national, and regional bandplans adopted by cooperation and coordination among individuals and licensees."

A copy of the League's comments to the FCC is on the ARRLWeb page at http://www.arrl.org/announce/RM-9259-cmt.pdf.

LEAGUE SUGGESTS ULS CHANGES

The ARRL has expressed overall support for the FCC's wide-ranging rulemaking proposal to implement the Universal Licensing System (WT Docket No. 98-20). But the League also suggested several changes to the plan.

In comments filed May 21, the League supported deleting the application process for non-US hams to operate in this country. But the League says the FCC should impose a one-year time limit on such operation or at least be consistent with CEPT and CITEL requirements. The ARRL took advantage of the opportunity to urge the FCC to authorize visitors from certain European countries and the Americas to operate during short visits to the US. The League also said the new rules should require non-US ops to have their license document in their possession while operating in the US or its possessions.

In the same vein, the League's said it would "object strongly" if the FCC stopped issuing license documents to hams. The League said it's often necessary to prove that one is a licensee. It cited amateur protections under state and local scanner and antenna laws, as well as requirements to produce a license for overseas operation. The FCC's ULS proposal did not suggest eliminating license documents, but the League said it's heard "repeated staff references" to the notion, and added that the proposed rules "contain nothing that would continue to obligate the Commission to issue license documents."

The League also discouraged the FCC from adopting a proposal to turn over issuance of club and military recreation licenses to private, third-party administrators. "The task is of a minimal nature and does not justify the creation of a cumbersome, multiple-administrator system that requires real-time coordination among the multiple administrators." The League said that the current system works well and should be left in place.

The League also suggested changes for the new multiple-service FCC Form 605, slated to replace the venerable Form 610 when the ULS is adopted. The League said the new form makes it "inherently more cumbersome for the amateur licensee to determine which portions of the Form are to be used and which may be disregarded." Certain items that were not in the old Form 610 "should be deleted for amateur applicants," the ARRL said. Also, the League urged the FCC to retain a standard physician's certification for a medical exemption from the higher-speed Morse Code requirement.

The ARRL also questioned the requirement for applicants to supply a Taxpayer Identification Number (TIN)--typically a Social Security Number--if they are not participating in the vanity call sign program, which is subject to a regulatory fee. "Many radio amateurs are concerned about disclosing their Social Security numbers without assurance of the necessity therefor and

without assurance of confidentiality," the League's filing said. "The Notice offers very little of either."

The League also said the FCC should not make electronic filing mandatory as of January 1, 1999, as the FCC's Notice proposes. The League said electronic filing is not yet available to all applicants and the requirement "would certainly disenfranchise some."

MIR-SCHOOL QSOs CONCLUDE; ANDY THOMAS SAYS "THANKS" FROM SPACE

A special arrangement linking several schools and individuals via telephone and Amateur Radio with US astronaut Andy Thomas, KD5CHF, aboard the Mir space station capped a series of highly successful Mir-school Amateur Radio contacts. The historic, early-morning QSO May 29 very likely marked the last ham radio contact between earthbound students and a US astronaut aboard Mir. The contact was coordinated by the Space Amateur Radio EXperiment, or SAREX. Thomas' Mir tour ends in June. He's the seventh and last US astronaut scheduled to stay aboard Mir, and his departure comes amid renewed concerns about the safety of the Russian space outpost.

A school that had been scheduled for the time slot at the last minute wasn't able to get details coordinated in time. So AMSAT SAREX representative Frank Bauer, KA3HDO, took things in hand. He contacted the Burbank School in the Chicago area and Santa Rosa Junior College in California. The schools were able to quickly round up students, teachers, and mentors who were more than happy to get up before dawn to speak with Thomas.

ARRL SAREX representative Rosalie White, WA1STO, also got to take part in her first SAREX QSO, after years backstage arranging contacts.

T.J. Bailey, KF6IAO, of Geyserville, California, High School had the honor of calling Thomas on the radio and hearing Thomas Australian-accented reply. Outstanding conditions allowed Bauer to begin by thanking Thomas on behalf of the SAREX Working Group for touching the lives of thousands of students, teachers and parents all over the US in the past 14 weeks.

"It was my pleasure!" Thomas replied. "The students and you all are the ones who got up early. You're the ones who should be thanked."

White then thanked Thomas on behalf of the ARRL. "The future of the United States is in the hands and hearts of our youth, and you've fired their imaginations as you've spoken with them via ham radio," she said. White asked Thomas if he felt the students got a lot out of the SAREX contacts.

Thomas replied in the affirmative. "If the level of questions can be considered indicative, then these students gained tremendously," he said. "The questions from the many different young people were quite penetrating--they have a keen interest in the space program."

Students and teachers at the various locations then asked questions about the crew's sleep schedule, the greatest thing learned during any of the Mir missions, how he felt physically, and Mir's safety. Thomas reported that the Mir is very stable now, and that the hardware is "robust."

Thomas recently issued a "thank you" message of his own to hams around the world who have sent messages via the Mir packet system. "I hope it is understood that the volume of traffic has made individual responses impossible, but we really enjoy your mail," he said in a packet broadcast from R0MIR.

Thomas said FM voice contacts have been "very difficult" because of the large number of stations calling him, especially over the US and Europe. He said he would try to do more FM contacts "in the short time I have left," but he asked stations that already have worked him on FM to stand by and give others a chance.

Earlier this month, students at schools in Texas, Tennessee, and Australia also were successful in speaking with Thomas during SAREX-arranged contacts. Thomas chatted with students at two schools in his native Australia. Bauer reports that students at the School of the Air--located in several remote areas--were bridged together with VK5AGR using a teleconferencing facility for the May 25 contact. "When asked what he misses most, he said he would love to have a hot shower," Bauer said. He also said he was looking forward to being part of the construction of the International Space Station. Bauer said students at Australia's Gormandale and District School stumped Thomas with the question, "How does a yo-yo work in space."

Thomas is due to return to Earth June 12 aboard the shuttle Discovery. NASA has said it wants to postpone the launch of the first pieces of the ISS, delaying the start of in-orbit construction until the end of the year. The first part of the station, a Russian-built control module, is behind schedule.--thanks to Rosalie White, WA1STO, and Dave Larsen, N6CO

W1AW TO OPERATE CLASS A DURING FIELD DAY

Maxim Memorial Station W1AW will operate as a Class A entry this year during Field Day. The popular annual event occurs this year on June 27 and 28.

"We've operated as a Class D entry much too long," said W1AW Manager Joe Carcia, NJ1Q. Carcia says W1AW will probably operate as a Class 3A entry from a state park in Bloomfield, Connecticut.

Carcia and HQ staff volunteers will operate W1AW during the event. Operating positions will be set up in advance of the start of Field Day at 1800 UTC on June 27. He said he expects to have two generators on hand supplemented by two 750 W inverters. "We may also have a large tent for protection from the elements--the weather, not the antennas," he said. W1AW Field Day ops will log on computers

47 GHZ VUCC No 1 YIELDS NEW NORTH AMERICAN DISTANCE RECORD

Doug Sharp, K2AD, and Brian Justin, WA1ZMS, operating as W2SZ/4, have earned the first VHF/UHF Century Club (VUCC) award on 47 GHz and now are setting their sights on 76 GHz. The pair accomplished the feat during the weekend of May 9-10 from a site on Apple Orchard Mountain, just off the Blue Ridge Parkway near Bedford, Virginia (FM07). One contact also set a new North American distance record for 47 GHz, a distance of 107 km (71 miles) to Leigh Mountain near Farmville, Virginia (EM96). That barely beat the former

NA distance record of 105 km set in 1988.

Sharp operated rover station WA1ZMS/4 for all the contacts, while Justin operated W2SZ/4. The two ops said the hardest part of the whole venture probably was the two years it took to collect the parts they needed and to construct their gear. Once up and running, though it only took about 30 hours to make VUCC, including waiting for the rain to stop. Justin and Sharp point out that rainfall and even humidity can affect propagation at 47 GHz. The mountaintop station had a 2-foot dish, while the rover used a 1-foot dish. The antennas have a 1(beamwidth. They used a surveyor's compass, an inclinometer, and rifle scopes attached to their power-supply modulated Gunn sources to set up the line-of-sight contacts. Crystal-controlled frequency sources aided in tuning. "Coordinating the frequency was a bit of a trick," Sharp said, because of drift. Power levels were in the vicinity of 100 mW.

W2SZ, the club station of the Renssalaer Polytechnic Institute (RPI) Amateur Radio Club in Troy, New York, already holds VUCC No. 1 on 3, 5, and 24 GHz.

WA5VJB checked the cards for the VUCC award at the Dayton Hamvention. For more information and photos, see http://www.mgef.org/47ghz.htm

FOUR INDUCTED INTO CQ CONTEST HALL OF FAME

Contesters Richard Frey, WA2AAU, Glenn Rattmann, K6NA, Roger Western, G3SXW. and Gene Walsh, N2AA, have been inducted into the CQ Contest Hall of Fame. The four were honored during the CQ Contest dinner held during the Dayton Hamvention, May 15-17.

The event, organized by John Dorr, K1AR, and Tim Duffy, K3LR, was sold out, and upwards of 300 were on hand for the ceremony. Inductee G3SXW gave a short talk about how "fun" and "focus" make for successful contesting.

Receiving certificates for the best presentation at the contest forum were Ken Silverman, K2KW, and Tom Schiller, N6BT. Their presentation was about the 6Y4A DXexpedition.

John Kanzius, K3TUP, and A61AJ were acknowledged for their material support of CQ contest log processing/checking.--Mark Wilson, K1RO

SOLAR UPDATE

Solar prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: Solar indices were down this week, as they have been during the past few weeks. The sunspot number is half what it was the previous week, and the solar flux was down over 16 points. So far this month the average flux is running about the same as April and March, when it took a jump of about 16 points over January and February.

Solar flux is expected to peak May 29 and 30 at 98, then drift to 96 on May 31, then go below 90 after June 7. Flux values should drift above 90 around June 18 and to the mid-90s in the week prior to the end of June.

During June we will be experiencing more summer-like HF conditions, with weaker daytime signals and higher noise, due to increased thunderstorm

activity in the northern hemisphere. With fewer hours of darkness and more storms, look for poorer conditions on 160 and 80 meters. Although 20 meters has been the best DX band around the clock, there is a good chance that solar activity will move higher this summer, and 15 meters could become the best daylight band for the season.

There was a solar flare during early hours UTC on May 28, but it is not expected to affect geomagnetic indices. About 12 hours earlier there was some activity that could cause a rise in geomagnetic activity on May 30 or 31. Look for very quiet geomagnetic conditions around June 9-13 and possibly on June 15 and 18.

WA5JCI in Texas reports the best tropo openings in years, when he worked several Gulf Coast states and then heard Mexico on a local 2-meter repeater. Also, N0JK in Kansas worked a number of Gulf Coast and Midwest states on 2-meter tropo and heard KT4AL in Florida on 432 MHz.

Sunspot numbers for May 21 through 27 were 29, 26, 47, 41, 57, 49, and 49, with a mean of 42.6. The 10.7-cm flux was 89, 87.4, 90.3, 95.6, 92.3, 92.5, and 94, with a mean of 91.6. Estimated planetary A indices were 14, 8, 13, 16, 15, 8, and 7, with a mean of 11.6.

CHARLES MICHAELS, W7XC, SK

QST author Charles Michaels, W7XC, of Phoenix, Arizona, died March 22. He was 75. Among other contributions, Michaels wrote "The Null Steerer Revisited" in the July 1994 issue of QST, and "Some Reflections on Vertical Antennas," in the July 1987 issue of QST. A Philadelphia native, Michaels was first licensed as W3IGR in 1939. He served as a radioman in the US Navy and was at Pearl Harbor on December 7, 1941, when the Japanese attacked. Following World War II, he graduated from the University of Pennsylvania and later advanced to chief engineer, systems, for Eckert-Mauchly Computer Corporation (later Sperry-Rand's UNIVAC division). He also held positions with Honeywell, GE Computer Operations, and Xerox Corporation before he retired. Michaels was an ARRL life member. He also enjoyed amateur astronomy.

IN BRIEF:

* This weekend on the radio: The CQ WW WPX Contest (CW) is this weekend. See March QST, page 101 for details. Just ahead: The QRP TACtical Contest is June 6. The ARRL June VHF QSO Party is June 13-15. See June QST, page 87, for more information.

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications through May 8. On May 28, the FCC granted 103 new call signs. Another 124 applications landed in the work in process stack and have been processed.--FCC

* Affiliated clubs info on the Web: The ARRL Field Services Department reports major improvements to the information available for ARRL Affiliated Clubs on the ARRLWeb page, http://www.arrl.org/field/club/. In addition to

the summary information already on the Web, detailed club information now is available. Searches are possible by club name as well as by state, section and ZIP code. Club officials can submit updated information to the Field Services Department directly from the club search facility. This capability replaces the electronic annual report form previously in use. The system also now permits FSD staff to update Web information as often as needed, instead of just monthly.

* ARRL DX contest entries posted: ARRL Contest Manager Billy Lunt, KR1R, report that a list of W/VE entries in the 1998 ARRL International DX CW Contest has been posted at http://www.arrl.org/contests/claimed/98/usdxcw.html. If you don't find your entry, or if there is an error with your entry, contact the Contest Department as soon as possible at 860-594-0252 or via e-mail kr1r@arrl.org. Lunt says the DX entry list will be coming soon.

* New prefix for Pitcairn: The new prefix for Pitcairn Island in the South Pacific is VP6. The British possession changed its call sign prefix from VR6 to VP6 on May 1. Call sign suffixes will remain the same. As part of the reversion of Hong Kong to China, the British government also ceded the international ITU prefix block, VRA-VRZ, to China. Old timers may recall that VP6 used to belong to Barbadoes before it became independent.

* Worldwide ham population: According to the annual statistics collected by the International Amateur Radio Union (IARU), there were 2,777,000 amateur radio operators in the world in 1997.--thanks to Nao Akiyama, NX1L

* Call for papers: Papers are due July 1 for the 24th annual Eastern VHF/UHF Conference, August 21-23 at Harley Hotel, Enfield, Connecticut. The conference is sponsored by the Eastern VHF/UHF Society and the North East Weak Signal Group (see http://uhavax.hartford.edu/~newsvhf). Last year's subjects included operating, antennas, equipment design, interfacing, and testing. All submittals must be camera-ready with one-inch borders and separate photos with accompanying page layout. Send submittals to Bruce Wood, N2LIV, 1998 Eastern VHF/UHF Conference Chairman & Proceedings Editor, 3 Maple Glen Ln, Nesconset, NY 11767-1711; tel 516-225-9400 (days) or 516-265-1015 (eves); e-mail bdwood@erols.com. This year's conference will feature speakers, and a technical laboratory. Gerry Rodski, K3MKZ, of SSB Electronic will conduct a preamp noise-figure measurement workshop (50 MHz-10 GHz). Joe Reisert, W1JR, will manage the antenna gain-measurement range (222 MHz and up; entrants receive a hard copy plot of their antenna). Ernie Gray, W1MRQ, will host a VHF-SHF trivia quiz. The ARRL will publish the Proceedings which will be available at the event.

* SETI League names Bruno Award winners: The SETI League has named two hams from England as winners of the group's Giordano Bruno Memorial Award--its highest honor. Ken Chattenton, G4KIR, and Trevor Unsworth, G0ECP, received the award at the SETI League's annual meeting March 29 for their contributions to Amateur Radio astronomy. The pair had volunteered to coordinate SETI League activity in the UK. The SETI League is promoting a privately funded effort to search for extraterrestrial intelligence. The group's executive director is Paul Shuch, N6TX. For more information, see

http://www.setileague.org, e-mail n6tx@setileague.org, or call 800-828-7384 (TAU-SETI).--SETI League

* Titanic call sign fever: Mark Richards of Littleton, Massachusetts, has a new vanity call sign. It's K1MGY. "As you know, MGY was the call sign of the Titanic," he writes. "I am pleased to carry this fine call sign." (Let's hope Mark doesn't feel compelled to go down with the ship--Ed.)

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

3495. Re: The FT-50 is a piece of SHIT.

Check out www.sailmail.com. A pretty recent setup, intended for mariners, but probably useful at this time for west coasters. It is marine ssb, no ham required. But the principle is the same. Just make sure your radio is very frequency stable. I set up the system last week, and it was quite functional up to 40 miles offshore. I also know of a boat on the way to the Marquesas, and they are using it fine..

Regarding the Jewish friend I mentioned earlier in this thread, her grandparents fled Poland in the '30s. Her parents were born in the US. After the war her grandparents tried to find their many relatives who were not able to leave Poland, and were told by their neighbors that all had been taken away to the Death Camps and none had came back...

A friend of my father was a US soldier who liberated one of the Nazi death camps and witnessed first-hand the horrors you evidently deny.

Sounds like it might be time for a new controller. Take a look at these
sites for some ideas.

Curtis said:

First of all, I wasn't there so I don't know one way or the other
if there was a holocaust as History tells us. ... don't really care.

But, if I remember correctly you said your friend is a holocaust survivor.
Then you imply your friend was born in the U.S. (her parents
moved here you say).

Well hell, then I must be a holocaust survivor also, my forefathers left
(France or maybe Portugal in probably the 1800s) and came to the U.S.

> A friend of my father was a US soldier who liberated one of the Nazi death
> camps and witnessed first-hand the horrors you evidently deny.

For that person to have witnessed 'first hand' the horrors you speak ofmeans
that the horrors were going on before his eyes. Do you really
think that if one of the Nazi camps had been overrun by the Allies
that the gassing would continue..??

It seems to me that you speak from emotions .. maybe you could use
some logic next time.

Brady Law is unconstitutional according to the Supreme Court.
Help repeal it .. support HR 2721

>
>
> --Leigh Marrin/KM6JE.

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

Well, I thought I might have judged Burt wrong with my quick reply. I thought to myself "Well, just read what he has to say. Maybe I might have been wrong. Maybe he actually has something productive to say about amateur radio. Maybe he actually might be a decent guy. " NAAAAAA! Again stated...WHO CARES?!

Matt...(and Burt for that matter)...I frankly get tired of Burts cross-posted trolling BS (might I remind you about the recent hams and guns cross-posted "series" that had absolutely nothing to do with the NG's that it was posted on.) Yea, you can say I'm having my fun...browsing these great newsgroups(don't you enjoy it?). I enjoy reading ham related postings and articles. I don't like being subjected to spam, stupidity, and Burt's trollings. Don't get me wrong, Burt has the absolute right to say anything he wants. BUT, I also have the same right to say what I feel also. Matt, it's not the power...it's the "right"...a God-given right and guaranteed by the Bill of Rights. I assume the UK has something simular. There is an old saying..."your right to double up your fist ends at the tip of my nose". I know I am not the only person that has been offended by Burt's crap. As a ham...if you enjoy being slammed by Burt...more power to ya. Me...I'm going to speak out when I get slammed.

I was doing some work and took the FT-50 off my belt and placed it
on a retaining wall 6 feet high so i wouldn't damage it.I figured it was
safe.WRONG! It was knocked off and hit the concrete hard.
I had it in the Yaesu case.All that was damaged was the belt clip,
it had a few scratches and also the case.I also keep it on the seat of my truck
and it has dropped to the floor and out of the cab but it is still working
great.

I found that ADI's AT-600 is quite tough (it was many features too).
I dropped to asphalt from bicycle more than two times, but it still
works perfectly although I see a bunch of scratches. If you carry
this outside, make sure you have some sort of case (and if you will
drop). The external body isn't as hard as HTX-202, for example.

Burt, if Im may be serious for a minute, You appear to have
a physiological problem along with not much of a life.

First of all, anyone with average intelligence upon becoming
disenchanted with something that is voluntarily would simply
move on to something more to their liking. Have you thought
about writing canceled on your license and mailing it back to
the FCC .. ???

What's that new medicine on the market now .. Viagrin .. or
something like that, you know, that pill developed for people
like you. Maybe if you tried it, it would give you a new outlook
on life and you might even have something nice to say about
something/someone once in awhile.

Support HR 2721. RTead about it at my web site.
Take the Gun Page link.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

3527. Conservatism considered

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-30 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6knt5q$9os$1@nnrp1.dejanews.com>
Source record: 171182

Conservatives today are often associated with the GOP, yet there are other ways to interpret conservatism. The majority of Americans, whether Democrats or Republicans do not realize that within the political spectrum as defined by parties, there is a broader conservatism at work. The American people are conservative in that they choose to conserve- that is protect and defend their present form of government. When the Constitution was finished, Washington, who presided over the Constitutional Convention, remarked that the document would last a few years and then need to be replaced in all likelihood.And yet these men were conservative themselves, but such were the times.

The South was conservative, not in today's terms but in terms of wishing to protect the government and social institutions as they had known them since
1776 and earlier. Yet so too did the North seek to preserve the Union as they had known it since 1776 and earlier.

Today we seek to preserve amateur radio, whether code or no-code, ARRL or anti-ARRL, the ultimate vision remain the same. May the spirit that guides this country guide the hobby's future as well.

"Bil" from 7 land questions my use of "hail" with respect to Sen. Goldwater.

A point well taken Bill. This dates back to the Roman Republic before the succeding poltical miscreants soiled the term. In this context it's use implies a salutation to a person of official position.

In the Roman tradition, I hail the Senator.

>reading, any help is appreciated!
>
>

Yep. That's a violation. You may not transmit from land or even from a vessel
in drydock, except if you have a coast station license, you may use your marine
VHF to communicate with ship stations. Note that a Station License and an
Operator license or permit are two different things.

True, with an ordinary low power marine VHF, you do not need an operator
license to transmit from a privately owned, non commercial vessel. However, I
believe your vessel must still have a Ship Station License.

47 CFR part 80 has all the pertinent regulations.

Forgive me for posting this here, but I don't have access to
rec.radio.swap on this email-only account...

I have a HAL ST-5 RTTY demodulator, plus the following manuals:

ST-5 RTTY demodulatory
XTK-100 AFSK Oscillator
ST-5AS Auto Start
425 Hz Discriminator

all for $10 plus shipping.

I also have a Blaupunkt (German-made) "Derby" shortwave receiver,
for automoble or portable use, covers 2-8 Mc plus AM-FM broadcast
bands, manual included. This is a 70s analog radio. $25.

>
>I have a pair of FRS 2 ways and they work good for handheld use. I'm
>also interested in possibly getting licensed on GMRS and setting up
>possible a base station or a good mobile station that I can use with FRS
>and maybe eventually other GMRS

In the previous configuration of GMRS, a station desiring to utilize what is not Ch. 1 thru 8 of FRS had to reduce power. Under no circumstances could you use 25 to 50 watts on these special channels.

Now that FRS is a reality, this is even more important. Nearly a million of these units are in use by families desiring short-range communication among themselves. It is not legal, nor in keeping with the function of FRS, to have any high-powered stations, nor stations with external antennas.

You would be better served to apply for a license in the GMRS service. I hope that soon the FCC will lower the license fee for GMRS, now that it, also, is becoming more family orientated.

LibNet,

Might you be one of those ANGRY technicians that was let go? Sounds like it.

BTW, I agree that "remote monitoring" is not a reality for the FCC because of their limited budget. For the NSA...yes! For the FCC...no! They don't care what we do on the ham frequencies. Those freqs will all belong to commericial interests in the next 15 years or so.

Duwayne Hick

I know what you mean about YAESU service.. I will NOT buy another
YAESU!!! I also had a YAESU FT-1000MP, but have got rid of it....

I never had so many problems with a $2700 radio! I personally took it
into Yaesu to have it looked at. A technician spent all of 5 minutes
while I was there and said it was O.K...??

Had a serious antenna tuner problem....(They said it was my antenna!)

A Kenwood and Icom worked perfectly on this SAME antenna for years!
I could not convince them it had a problem.

Save your money and buy a Kenwood or Icom!

This is a list of technical things,for which, I am looking for either,
parts, information,or manuals and circuits.It would be most apreciated
if anyone could help me ,and many thanks for help received so far.

1/ circuit for A.W.A. distortion and noise meter type
A51932 serial No- 517.

2/ Siemens Halske three contact connector Type 9 Rel kli 6a.

:-Got a lot of duckshoving,got onto someone(BOB),gave me this no_
"9721 2888 and would try to find out the source of the plugs.
He rang back but said the parts did not exist as the equipment
was so old.
-He also said to try customer service on 9420 7325.

Today Mon 25 Aug ,got relpy from tony ?? (from Siemens)
said that the plugs could not be found in any of their storages

3/ Circuit diagram's for :-
Siemens PEGELSENDER 200Hz - 620KHz
LEVEL OSCILLATOR W2055

Siemans PEGELMESSER 200Hz - 620KHz
LEVEL METER D2055
4/ G.E.C. 1300M Cathode ray tube for B.W.D. 521 series of cro.
Also any parts or another BWD521 or 521R and any
manuals would be very mutch apreciated as I'm
restoring one.
5/ See if there is an Australian sorce of info on
AG440 Record/play amplifiers.
AG440 2 track 1/4" tape heads

6/ Enquire about 2track 1/4" tape heads (record and play)for Rola 77MK3
Tape recorder.
7/ C.E.I. 310 camera manual

8/ 10-GHz gunplexer.
Microwave Associates

Microwave Asociates Gunplexer
Model MA87141-3
35 to 40 mW output version.

9/ Sony TV cameras:-
Circuit diagrams/manuals for,
Sony Video camera model HVC 3000 P. Trinicon camera.

Sony Video camera model DXC 1200 P. Trinicon camera.

Sony Video camera model AVC-3250CE and AVC-3200CE vidicon.

JVC Video camera model:- GS-4600E.

10/ Video recorders:- manuals/circuits for,
Sony SL-F1E portable Beta vcr.

Sony SLC-6AS front loading Beta vcr.

Sanyo VTC9300 Beta vcr.

National NV9210 UMATIC vcr.

Hitachi portable UMATIC vcr,Model:- SV-340.
Hitachi ac power adaptor model AP-34.

11/ Circuit for:-
a/ Realistic AM stereo tuner model,
TM-152 AM AM stereo tuner.
b/ Realistic AM FM stereo tuner model,
TM800 AM FM stereo tuner.
12/ Circuits/manuals for Hewlett Packard ,X-Y recorders models:-
7045A
and
7046A.

13/ Circuit for:-
Vintern BTR8 low band 50watt valve base station unit.

14/ Circuit for:-
Marconi TF934, FM modulation monitor(deviation meter).

15/ Manual for:- Siemans, LEVEL OSCILLATOR .3 to 1200 K/CS,REL 3 W 29.

16/ Manual for:- a/ Hewlett Packard,SHF signal generator model 618C.
b/ Hewlett Packard,SHF signal generator model 620B.
c/ Hewlett Packard 50Khz to 65Mhz model 606A.

17/ Manual for:- Cushman Electronics model CE24,selective level meter.

19/ Circuit or manual for:-

Systron donner frequency counter,
MODEL 6052.
Also "NIXI-TUBES",for above unit.

20/ Circuit or workshop manuals for:-
YAESU. A/ Yaesu FRG-7 communications receiver.
B/ Yaesu FT-101B.

21/ Icom:- Internal battery charger module (option) for ICOM IC-215
portable Two metre tranceiver.

22/ Info about Diablo 630 printer,does anyone know,circuits/manuals.

23/ Tunable sound Demodulator & Audio output for satterlite T.V.receivers.
By David Pack VK2GIO.
P.C.B. type:- AATC0001 mk1,from R.C.S.radio.

24/ I.V.C. 1" video recorder circuit manual for :-
I.V.C.video tape recorder model,****.

25/ TS711-A optional computer interface module,how mutch? can it be obtained?.

26/ Circuit diagram or manual for :-
RODE & SCHWARZ - STEREOMESSDECODER-STANDARD STEREO DECODER,
Model:-MSDC.BN4193.

27/ High voltage cable type:-

E64787 RJ
A.M.W. style,3257
250C, 25KVDC.

Note:- I think the "250C",part of the spec,refers to temperature
ratings of the cable,particularly as we saw it in a gas
cooking device dispite the builders obvious lack of
knoledge on high voltage wiring!.

28/ Electronics Australia October1984 AM stereo decoder project circuit.

29/ From DSE :-
A/ DSE Commander, cat,6308,2Meter tranciever, circuit diagram,
also its from EA,January 1984.

B/ DSE Explorer,UHF Tranceiver,cat.6300,and,6302.
also EA about 1984, or 1985.

31/ RANK NEC HPA 4619 Stereo modulator pn 172 48 1614.

This unit uses Sohsin filters,
These are:- 53KHz low pass
Soshin HZI-009401-002
53 KHz LPF
8302011

:- 15KHz low pass
Soshin HZI-009401-001
15 KHZ LPF

32/ Setup disks for IBM PS2 Model 80 and model 55

33/ 600-600 Ohm +20 Dbm 30Hz to 20Khz audio transformers:-
Manufacturer :- Dyne Indudtrys.
Part nunber :- Type 8022.
Telecom app No_ :- RA 77/119.

34/ Radio broadcast UHF/microwave STL Equipment.circuit diagrams needed.

a/ TFT Transmitter model 8300, 900Mhz band.
b/ Electronica Aural STL Receiver Model RX RL-NV. 900Mhz band.

35/ Sony video monitor model CVM1810E circuit diagram reqired.

36/ Poul Kirk Electronics 16 chanel audio mixer.Info and circuits needed.
This unit consists of:-
16 input chanels model, IM-04.
6 output/peak limiter unit,model, GOM-04.
1 talkback/house momitor/test osc,unit,model, TBM-04.
find out about the Duncan faders it uses,price and availability.

37/ Other items of interest:-
Yamaha pa amp model,P2201 100W/chan
DBX 163X limiter/compressor.
38/ circuit for :-
Video monitor
RAMTEK graphic display monitor
model,GM859C s/n 05G375 ,assy 05949.
RAMTEC CORP,SANTA CLARA, CALIFORNIA.
Also the lable on the chassis reads:-
IKIGAMI COLOUR MONITOR
model DM511H REV.
IKIGARMI TSUSHINKI CO LTD,TOKYO,JAPAN.
June 1980.

39/ A circuit or manual for:-
TRANSITRON Model SG-132 ,sweeper generator,
this unit covers 15Mhz to 400Mhz.
It features a built in CRO.
made in Manchester,N.H.

40/ Manuals for Phillips FM-828, and Phillips FM-900,
also, software for the E prom in the FM-900.

41/ Circuit or manual for:-
Sony model,DXF-2ACE, electronic viewfinder.

42/ Circuit or manual for:-
Philips marker sweeper generator model,GM 28775.

43/ Circuit or manual for:-
AWA,VHF/UHF FM radio test set A412.

44/ Circuit or manual for:-
Advance af generator model, J 2 C.

45/ Circuit or manual for:-
ASTOR pulse & bar generator,model, P B 1.

46/ Circuit or manual for:-
UREI dual peak limiter model 1178.

47/ Does anyone know where to get some socond hand 600 ohm line XFMR's,
of the following types?
a/ Arlec LT 347 600-600 ohm A&R Electronics.
b/ L.M.Ericsson-Trimax Broadcast types such as
MS1693 ,MS866,etc.

48/ I am trying to restor an old AN/TRC-24 military radio setup and I'm
interested in obtaining any of the following:-
a/ circuits or manuals.
b/ power supply PP-685/TRC.
c/ Radio receiver R-417/TRC.
d/ Radio transmitter T-302/TRC.
e/ Transformer TF-167/TRC.
f/ Transmitter B band tuner AM-912/TRC.
g/ Transmitter C band tuner AM-915/TRC.
h/ Transmitter A band tuner
i/ Amplifier-converter AM-914/TRC
j/ Amplifier-converter AM-913/TRC
k/ Radio frequency amplifier AM-912/TRC
l/ RF amplifier-multiplier AM-915/trc

So this is a list of some of the radio set I would be most interested
in any of the parts antennas or anything to do with radio set
AN/TRC-24 or its accesories.

49/ Still on the subject of vintage millitary radio equipment,does anyone
know about the following equipment,circuits or parts there of.
a/ MARCONI SHF transmitter type B.D.415, 4.55 to 4.85 Ghz
and accompanying receiver.

b/ Mullard(I think) Type B70 transmitter/receiver,also
of 1950's 1960's Vietnam war vintage.

If anyone can help it would be most appreciated.

50/ Circuit for Equatorial model C-200 . PN 99-0025-08 A,microwave link
and its asociated parts.It comes from Equatorial, Mountain view
Ca 94043 U.S.A. It was made in 1989.

Thanks in advance Nigel .

>scams ever perpetrated on the U.S. tax payer!
>
>
>
So what? just because enforcement is lax, or I should say rare, does not mean
we should just go ahead and start breaking rules rght and left. Most of the
CFRs are there for a good reason. I follow the rules for the simple reason that
we SHOULD follow them, not out of fear of the long arm of the FCC. So should
everybody else. The question was not asking if the poster should transmit from
his home, car, office, whatever; the question was whether or not it was a
violation to do so. If he chooses to do so anyway, I will try not to take it
personal. If he chooses not to, I suggest that you not take it personal
yourself, Drew. I pointed out that according to what I know, it was not legal.
I offered no opinion on the morality of the proposed operation.

Kenwood recently put all the current manuals, in PDF format, at their web site.
Check Icom's site and see if they have done the same thing. If so, you will end
up with a much nicer document than a scanned or xeroxed copy, and can reformat
the pages to suit you and whatever binding technique you want to use, even
inject your own notes and references.

So what is the mode, Mitch? is this via automated SITOR? if so then I bet it is
fairly reasonable, costwise.

My FT50 has accidently been dropped a half dozen time and has not failed yet. I'll lay it on the seat of my truck while driving and when I get out it wants to follow me. Once I set it on the hood of the truck and a rain storm developed and I forgot about the FT50. The only problem I have found is the poor antenna that came standard with it.

H I H I W A R N I N G

O F F I C I A L K 1 O I K N O T I C E

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

Another Goldwater joke of the 1964 campaign: Au + H2O -> NR.

BTW, I got tired of Johnson supporters defacing my Barry for President bumber stickers - in ARIZONA, yet.

Dear Burt,

You're unbelievable. I do not understand how a person that professes to be a mentor and teacher of others, stoops so low as you. You have no idea of the bile and sourness that you exhibit. It has nothing whatsoever to do with bravery or cowardice. It is the blathering of a demented mind such as yours that create most if not all the problems in the world in which we live, amateur radio aside.

Your continued pointed baiting will one day do you in, not necessarily physically, as you seem to be so interested, but mentally. You will falter and eventually be a pitiful shell of a human being...and by then, you will wonder why no one has come to your aid as selective amnesia takes over your thoughts.

Your constant asking for physical attacks or threats of attacking others is not going to serve you well as you must know. We live in a time when people act impulsively at far less prodding than you have been providing. You should be learning a lesson from the reports you hear, not waving a red flag.

I'm sure you must be an honest man and do not really exhibit homosexual tendancies as some have suggested nor do I think you behave as some have posted about you and your sexual advances toward children. All those things people post about your personal life cannot be true and I refuse to believe them.

I think your continued baiting is a ploy though, because you post to many newsgroups and do not focus your energy in any area. I hope that you find true happiness one day soon and live a full and productive life without bitterness and hatred. You are a fellow amateur and human being and every person has a right to be a pain in the butt occasionally, but none of us should take advantage of that fact and make it a profession as you do.
I wish you success and mental health for your future.
7 3 and I hope to work you on HF sometime.

Yesterday I passed the tech no code exam: I should have my call sign assigned sometime later this week, and I would like to be ready with a good starter radio.

I am going to be spending a lot of time in the Skywarn net, so I would prefer a handheld on 2m, but would also like to experiment with the other bands I have available. Since I will probably be out in the rain, I will need something which is weather resistant, and I personally prefer shock resistant as well. Additionally, I need the set to be able to receive 162.400 - 162.550 MHz (NOAA broadcasts) and (I know I am really pushing things here) it would be nice if it would sound the tone for the NOAA alert tx.

Is there a site available which has comparisons of the different transceivers? I am totally unfamiliar with the various brand names - Yaesu, Kenwood, etc - and have no idea which ones have good products.

I am not asking which is the "best" here - I know that personal preference has a lot to do with it. I am looking for people to tell me what they have and make recommendations, and perhaps direct me to a source for the comparisons.

Thanks,

Albert Clawson, {callsign not yet issued}

3575. FS: Atwater Kent Type E3 Radio Speaker

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-31 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6krsq4$gt5$4@csu-b.csuohio.edu>
Source record: 171028

Atwater Kent Type E3 Radio Speaker. The unit's chassis appears to have the original paint job and the paint is in good faded shape for its age. Meaning the gold is not bright as it was when new. Of course there's some chips, etc., but overall I'd call it good. If you want perfect in every way, this unit is not for you, but if you're reasonable with expectations for something that was made in the 1920's--you can use it without repainting it as is. The two cloth covered leads appear to have the original pins on them. Two of the six brown felt pads are missing on the base (not a big deal at all and easily dealt with).

The negatives are that the cloth grill will need to be replaced as it is torn in one spot both front and back of the unit. Also the speaker will have to be re-coned at it is visibly torn from inspection through the cloth grill opening. That is all I can say about the unit, I do not have an A-K to plug it into to test it.

$100 plus shipping.

I bought 3 of them for $129.95. If you look at the two sockets where
the CTCSS board plugs in, one of the two sockets has 3 pins. The
middle pin of the three pin socket has discriminator audio
feeding the input of the CTCSS board. Just plug a wire
into that pin for a "no solder" mod for discriminator audio out.
I have three of these radios on in front of me now. With the CTCSS
boards in use, they are very quite, no intermod or other unwanted
signals. At this price for basic monitoring, I would grab them.

3584. Yaesu FT-8500 Remoting

>also interested in possibly getting licensed on GMRS and setting up
>possible a base station or a good mobile station that I can use with FRS
>and maybe eventually other GMRS

I think, to use the FRS 467 MHz interstitial frequencies, you can only use an FCC approved handheld transmitter (which involves quite a few restrictions, including no modifications to the radio or antenna). If you want to use a base station (legally) with FRS units, you'd have to apply for a GMRS license. Here's a couple sites that address GMRS and FRS (I'm sure there's others...)

PRSG deals almost exclusively with GMRS (and is kinda anti-FRS) .
http://www.provide.net/~prsg/home.htm

KAF9380's site deals with both GMRS and FRS. It also has a forum for posting queries, etc. http://www.dougweb.com/gmrs.html

Hope this helps!

Hamish, (a good Scots name!) why can't you get the
original material...i.e. off the air, via a reciver?

It's all over the HF spectrum, you can't miss it.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.

Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

Gentlemen,

I would like to inquire as to whether any hams have taken a stand and actually produced documents for the several FCC commisioners or whether most plan on sitting idly by while the band is carved up, and then make ludicrous threats about privateering, bootlegging, and all manner of activities they have no intention of carrying out.

As in the rest of American government, it seems that hams are quite content to sit back and let their leaders lead without hearing any popular sentiment, then declare the presence of conspiratorial forces at work.

Just for interest the IC-T8 has a full dicast Al chassis I've dropped it heaps from pockets and off the bench but I do have the soft case to protect it. I go for Al chassis as they might make it heavy but give it strength.
My Mitsubishi analogue phone is built with the same construction its been off the bike at over 100MPH twice and once in a 100MPH accident its got half the case missing but still works fine I thinks its over 8 years old now!

Cheers
ERIC.

Maybe you should explain what is appropriate and what is not
appropriate by using specific examples.

ie. discussing the weather is appropriate since there is no other
groups where you can discuss about weather (but who is interested
anyway ??)

3607. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-31 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6kqq8t$i80@news.Hawaii.Edu>
Source record: 171060
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

I see you get the same support from your own countrymen as you do from the states Masa, exactly where do you come up with this bullshit anyway? You seem to have an endless supply of commentary about things you know little or nothing about.

You can build a 30m QRP rig, 5 watts. Cost including enclosure $30, now add $10 for feed line and $5 for a spool of #16 wire I bought at a hamfest, if we interpolate the length of the spool then the wire for the antenna cost about 50 cents. So a complete station for HF for $40, not quite what I would call expensive Masa. If you don't fancy QRP my other station consists of an HW-101 for $75 + $15 feed line and multi-element dipole made from the same spool of wire. $5 for a mic.

Total station, mic to antenna $100. 100 watts. Do you consider this expensive? I've filled pages and pages worth of DX using this station as well as scoring pretty decent in a few contests. You on the other hand spent over a thousand dollars on an Icom 706 and I'll bet you have not done 1/100th what I have with my puny $100 station. Perhaps you should sell your HF equipment while you can still get a couple dollars for it, maybe you could by some more 2m equipment you seem to be more at home there.

Hi.

I support pro-CWers !!! Just a suggestion: change the
regulation so that you can only use CW on the ham bands. I want to
see it. Please do !!!!!!!!!!!!!!!!!!!!!!!!

Make sure you and I support to increase the CW speed req't to at least
50 WPM !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

It [CW = ham radio ?] won't last wrong. hahahahaaaaaaaaaaa

I am sure it will be very fun to destroy the ham radio by supporting
the CWers. After disappearence of the ham radio by "Know CW = Know
Ham," we can attack the pro-CWers !!!!!

Why not let the pro-coders to take our position and help them ??

Does the 'mil-spec' include the enclosure? It might not. It may be the case material only that meets mil spec. Ever seen a piece of military gear packaged like an FT-50? At any rate anyone can have bad luck with a product, why not just fix the damn thing and move on? Lousy products? hardly, there are thousands of satisfied users so all of a sudden Yaesu sucks because YOU had a problem. I don't think so.

3614. Re: How to be a LID

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-31 00:00:00 UTC
From: Joe N0IAT <joentam@yahoo.com>
Message-ID: <357223C8.490B869C@yahoo.com>
Source record: 171067
Cross-posted to: rec.radio.swap,alt.scanner.radio,rec.radio.amateur.misc

On two meters lately, I have noticed a tendency of people making a concerted effort to sound like a "LID". Since this appears to be the new style in Amateur Radio, I thought I would present this handy guide to radio nerd-dom.
The following is what I call:
"How to sound like a "LID" in one easy lesson."
By David Handly, KF4LID

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they're fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E.
"Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you're an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly

way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason.

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater, or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

These eighteen easy steps should put you well on your way to "LID-Hood". I hope these helpful hints will save you some time in your quest to sound like the perfect "LID". I should also note that these steps need not apply to simplex operation, as nobody really cares because that HTX-202 isn't going to get out too far with just a rubber duck.

Thanks to John KD4DLU. I coppied this off his page instead of linking to it.

Hi,

Just a word to let you know that HamNet-UK is now back online and revamped.

It now includes a software section, hundreds of UK and foreign links, a hardware section (nearly completed) containing circuit diagrams etc, plus loads of other bits and pieces. Its really worth a visit! And its updated very regularly.

Thanks for your time.

Congratulations, Mr Fisher. I have been a SWL since 1964. I used to have a ham ticket (a "W3" call) but let it lapse in the 70's due to travel. I must say that
your observations are 100% on target. All one has to do is tune across parts of the 75 meter SSB band and you will hear behavior by individuals who I would be hard pressed to call adults. This band from 3.800 to 4.000 Mc is replete with
foul language, threats, music playing and general childish behavior. I think that
if the FCC took away a ham band or two a message may be sent, although on today's ham radio bands you will need the equal of a 2 by 4 crashed across the foreheads of some of the jackasses I hear on HF radio. Nothing but high class CB by a horde of rednecks.

P.F. - Va

3622. Help w/yaesu FT-900?

Newsgroup: rec.radio.amateur.misc
Date: 1998-05-31 00:00:00 UTC
From: Doug Hert <yaesuser@yahoo.com>
Message-ID: <6kqiunade0@207.18.95.152>
Source record: 171105

Can antbody tell me where I might find the freq. mod (expansion)
instructions for the
above listed radio? All attempts at websites so far have ended in the
list jumping all AROUND the 900 (including www.qrz.com) with no luck.
Any help would be GREATLY appreciated,

Doug

Hello all, I am writing a real-time decoder for Morse Code.

I would like to receive some samples of morse code, preferably received via radio (i.e. with some background noise) but it does not matter, so I can test my program.

Anyone who can e-mail me some samples (I only need a few seconds), please contact me first, since I don't want to end up with hundreds of megs of morse code in my in-box. :-)

Thanks,
Hamish

How DARE you post such a reasonable suggestion!!! <grin>

It does seem a little funny when we spend upwards of $300. on a piece of electronic equipment, but absolutely refuse to expend about 10% of that cost for a protective case.

You buy a HF transmitter and the antenna costs 10% - 50% of the
transmitter. What a bull****. Get away from ham radio. That's
the best way to save $$.

What is that problem?
Listen to the typical ham conversation, I am not the one with the problem.

> First of all, anyone with average intelligence upon becoming
> disenchanted with something that is voluntarily would simply
> move on to something more to their liking. Have you thought
> about writing canceled on your license and mailing it back to

We agree.
Hams have been taking for years and rarely giving back.
The reasons for having ham radio have evaporated.

The Cape Cod Mine Sweeping Task Force has declared Cape beaches safe from land mines. The Task Force, composed mainly of hams and other old men was seen this past week sweeping the beaches for mines. Many bottle caps, pennies and watch bands were also located and safely removed as a result of this operation.

Visit my web page, see
1.Actual photos of Cape Cod mine sweepers at work
2.The biggest hole ever dug by a ham with a metal detector
3.Proof that old men with metal detectors do have reflexes to loud beeps
4.Treasure seekers squirrel away the pennies they find after stooping over for a day at the beach
5.Treasure hobbyists who forgot their sunscreen and can't drive home
6.A ham using his metal detector to generate electromagnetic gields in a vainglorious attempt to send CQ
7.What's left of the one man who did find a floating mine
8.The only woman on the Cape to do this- feel the ground shake when she walks
9.See Cape Cod children (and some adults) throw 16 dollars in pennies out ahead of the metal detectorians
10.See the only hobby more lame than ham radio in 1998
11.See old men find what they lost the last time they combed the beach

13 June Dennis MA Barnstable ARC @ThepSmithRd $5/sp@7

See the smallest fly market in New England. Bring your family to the most boring day you can have on Cape Cod other than a rain out.

True facts:
18 peddler spaces taken as of June 1. Prizes/handouts to include Nuts and Volts magazine, ARRL books as prizes. The man in charge is still begging New England radio dealers for real prizes.

(OR YOU CAN ATTEND ONE OF THE MANY REAL HAM FUNCTIONS THE WEEKEND BEFORE AND GET REAL DOORPRIZES LIKE RADIOS)

What a bunch of bull, just build your own rig, QRP or high power, get an inexpensive QRP rig and build a PA for it if you want some more power. Get some wire and make some wire yagis or quads they work great, just string them between some trees. Whats that you don't have any trees, well get some seeds and plant some trees then repost to this group when the trees are about 40-50 feet tall, but until your trees grow just stay QRT.

....

I am glad that you forthrightly admit that you want the genocide and
extinction of my race -- most of your ilk are not so honest.

But I am afraid that your dream of the one happy mixed race of the
future is a hopeless fantasy.

Wherever racial mixing has occurred on a large scale, the result has not
been one harmonious mixed race, but exactly the opposite. New racial
combinations come into being, with multiple layers of stratification,
and a tremendous increase in racial conflict. (Spike Lee's _School Daze_
dealt with this process of race-formation and stratification among
mulattos and Blacks.)

India, which has now spun off into four separate nations, with at least
another two about to be born in blood, is a good example; as is Brazil,

where they are now shooting unwanted mulatto children like mad dogs in the streets, with the apparent approval of many in all social classes, who are now so degraded that they only wish to see life go on with a minimum of trouble.

Those are not futures I would wish on my children. The only way to prevent them is to preserve the European racial character of our nation.

That is what the founding fathers -- and in fact, nearly all American citizens and leaders prior to the last few decades -- wanted to do.

Most sincerely,

Kevin, WB4AIO.

Mike,

Give "Airmail" a try. It's a freeware product that's downloadable from the
web that utilizes the facilities of hundreds of stations that are running
the Winlink HF/Internet gateway software. Airmail allows you to create
messages offline, then upload them to a BBS running Winlink, which in turn
uploads them to the internet. It's an easy system to use (thought the
documentation sucks, IMO... which I why I wrote my own!), though a little
hit-and-miss as far as actually being able to connect to a Winlink site.
It uses PACTOR on the Kantronics KAM, or PACTOR II if you have the PTC-II
controller.

Another product worth checking out when it becomes available, is "HF Mail"
from Kantronics. This software looks and operates just like Eudora (a
popular TCP/IP based email system). It even supports POP mail. It will
work on PACTOR, SITOR and GTOR and will interface to all of the popular
commercial and amateur HF/Internet gateway packages (including Winlink).

I have used Airmail successfully many times, and will be testing out HF
Mail hopefully later this month.

Get your Ham license and get a 2 meter rig. There are repeaters everywhere, extending your range, not to mention that you can use more than 1/3 Watt!

Nope. Cordless phones, baby monitors are all open and anyone can listen to
these. It IS illegal to use any information gathered by listening to
cordless phone conversations.

The world of scanners is most certainly NOT ending. You obviously have absolutely no evidence to support that claim.

As for ham radio, had you been participating in any if the amateur radio activities (of which there were many with many hams attending), you would see that amateur radio is far from over.

Hi Nat

I just asked the ARRL a similar question. I wrote reginfo@arrl.org,
but you can also write vec@arrl.org or hq@arrl.org.. At any rate, here
is the answer I recieved

Date sent: Mon, 1 Jun 1998 12:42:00 -0400
From: "Jahnke, Bart, W9JJ" <bjahnke@arrl.org>
Subject: RE: Ham License renewal

Matt:

To change your address with the FCC you'll need to obtain, complete
and
forward to them an FCC Form 610.

This is a free service.

You can obtain FCC Form 610 by writing ARRL, 225 Main Street,
Newington, CT
06111. An SASE is appreciated.

Form 610 also is available from the FCC via the internet at

http://www.fcc.gov/formpage.html

or

ftp://ftp.fcc.gov/pub/Forms/Form610/

or by fax at 202-418-0177 (request Form 000610).

The FCC Forms Distribution Center will accept orders by calling
800-418-3676.

License renewals at present are free; and at present no examinations
are
required at renewal (it has never been a requirement); renewals are
presently free.

FCC allows renewals only in the last 3-4 months prior to the license
expiration date.

73,

Bart J. Jahnke, W9JJ
Manager
ARRL/VEC

3650. Opinion on Opto Scout & Cub wanted

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-01 00:00:00 UTC
From: deforger@aol.com
Message-ID: <1998060121575100.RAA01350@ladder01.news.aol.com>
Source record: 170935

I'm considering purchasing a frequency capturing device.I was looking at either the Scount or the Cub. There is a $200 dollar difference in the prices.From what i see the Cub has a greater frequency coverage but it will only do one frequency at a time.The Scout can hold up to 400 frequencies.It can also reaction tune a supported radio(i don't have a radio that is supported at this time,Maybe in the future) I would appreciate any and all opinions,bad or good.

E-mail-- Deforger@aol.com
Thanks in advance
Robert

Galaxy IV's loss brought down 95% of the pagers in the country.
This was, reportedly, because the pager co's use the downlink to
synchronize all their transmitters to be in phase.

I've never grokked how multiple transmitters on the same freq did
not create heterodyne interference out the ying-yang.

Is there anyone here who really know how this multiple-transmitter
scheme works? I can make wild guesses but....

Hi,

Just a word to let you know that HamNet-UK is now back online and revamped.

It now includes a software section, hundreds of UK and foreign links, a hardware section (nearly completed) containing circuit diagrams etc, plus loads of other bits and pieces. Its really worth a visit! And its updated very regularly.

Thanks for your time.

I've used my three FT50s on backpacking trips many times in the 23
months since I bought my first. They are in continuous use. The FT 50
is THE outdoor HT, IMHO. Mine have been wet in drenching rain, they've
```

been dropped from waist height to a rock footing, they've been used in temperatures from 12F to 112F, they've been used in dirty environments. I've had one setting on the dash of my truck in blazing Alabama summer heat for a year. The case is so durable that I never use the expensive cover I bought for my first FT50. Never the least problem except for an erratic power button which Yaesu replaced and it took 15 minutes to install.

The performance of the three that I own personally is a much better characterization of the FT50 than the two upon which you report so emotionally that you have to use vulgar language (the resort only of those poorly educated, or worse, educated beyond their intelligence).

I'd imagine any software that allows you to record audio from a microphone and
play wav files. Many sound cards come with a CD containing drivers and such
software.
Hope this helps.

From: joe@jkraus.com
Message-ID: <6kssjiauq1@nnrp1.dejanews.com>
Source record: 170972

I recently bought two Kenwood FRS radios. They are very cool, and I like them a lot. One of the biggest advantages is the size and weight of FRS radios,and they work pretty well for close car to car or people on foot in close proximity. However, I must admit I am a little disappointed in the distance of these devices. While OK in some circumstance, I guess I washoping for just a little bit better...like 1.5-2 mile in congested areas and a bit further in the open.
If I were to try to get this range, what is the right radio. GMRS? 2-Meter Ham, 70cm Ham? Will the FRS get a little better in the near future? I would not like to sacrifice the size or weight (next priority would be batterylife, but not quite as important). Any recommendations out there, or am I just living in a dream world?

If true, then the government should not be involved at all in any way
shape or form in the formulation or observance of voluntary bandplans.
Thus the ARRL's initial request was out of line. And apparently the
commenters seem to agree since the opposition to this ARRL
initiated action has been unanimous so far.

Rather than depending on posts to an antique radio group, Jeffy, you really should have consulted the UK amateur radio group directly. If you had, you'd find that the RSGB general manager has sent the following letter to all Morse examiners.

In a letter to all morse examiners dated 22 April 1998,
Peter Kirby - G0TWW says:

"Dear Colleagues,

I have been asked to brief you on the current situation regarding the Society's policy on the retention of Mandatory Morse Testing.

Council, after much serious consideration and wide input from members and non-members at club talks up and down the country and inputs to the current Presidential Working Group looking into the Future of Amateur Radio, is agreed that, in the present and expected future technological and cultural climate, retention of the mandatory Morse Code proficiency test required for access to the Amateur bands below 30MHz in its present form can no longer be justified.

At the present time it is IARU policy to support the retention of Mandatory Testing and over the coming months leading up to WRC2001 the Society will, through the offices of the IARU be submitting papers in an effort to bring the other Societies in line with our thinking on this subject.

No changes can be made before the issue has been discussed
at WRC because of current International agreements such as
CEPT - TR61-01 and TR61-02.

However, Council feel that we should move forward on this issue
to encourage growth and secure the future of Amateur Radio
within the UK.

To this end, the Society is in discussion with the RA to secure the
introduction of a new interim All Bands Licence which will allow all
amateurs access to the HF bands below 30 MHz on attaining a
Morse Test speed pass at 5wpm. The RA support this move and
it is hoped that this licence can be introduced as quickly as
possible.

This licence will only be for use within the United Kingdom.
Any amateur wishing to operate in accordance with the CEPT
agreements outside of the UK will still be required to take a
12wpm test.

This is a radical change of policy for the Society which we believe
will be welcomed by the majority of licensed amateurs.

This change of policy has not yet received wide publicity.
This briefing document is designed to stop any rumours or counter
rumours amongst your fraternity over the future of Morse Testing
within the UK. I hope it will go some way to put your minds at rest."

Letter ends with personal thanks and is signed Peter Kirby, General
Manager.....

There has been a lively discussion of this change in RSGB policy
on the uk.radio.amateur newsgroup since the publication of this
letter.

Actually, I believe the mil-spec rating called out on the FT-50 is for water resistance and vibration, not for the case material. Anyways, I love my FT-50R!

I am solliciting opinions on what is the best software (PC) for studying the question pool for Technician Class license; no-code specifically.

I am interested in the software that can generate lots of sample tests, tally scores, and show week areas.

I'd appreciate hearing from those with experience with these types of programs. Thanks.

Ed (Please post your replys to this list.)

I find it interesting that this is a recurring theme in the ham
community. There seems to be a cyclic movement that makes a fuss from
time to time to lower the standards by removing the CW requirement.
Now I do not support CW, nor do I detract from it. I am a no code
tech. I simply make the obvious observation that CW serves a primary
purpose of being a dork filter. It should be obvious to most that CW
is not used like it was in the olden days, and other modes are much
more prevelent in DX today. I know all the standard arguments for and
against such as the well known fact that CW can cut through the
garbage when other modes are useless, and CW uses less bandwith. But
lets face it; if hams are to be honest with each other (and
themselves) they will admit that the CW requirement for DX'ing amounts
to a way to keep the DX bands (relatively) free of the inexperienced
and the just plain clueless. Imagine there being enough of a market
for a cheap DX unit that radio shack would start carrying it (which
would happen if the code requirement were dropped). It would be like
opening up the CB crowd to world band operation. The two meter band
has in many ways suffered this fate. Anyway,. I just find myself
chuckling from time to time when I see the old "to CW or not To CW"
debate rear its head.

take care,

Yeah, well owning a CB linear amplifier isn't illegal
either. But if one is found in your possession, the
FCC will presume you to have used it, leaving you to
suck rocks and whistle "Dixie".

BTW, if you are not a lawyer, you would be well advised
to not tell people what is legal. They can act on your
advise and if they get shat upon, they can come after
you for giving them erroneous legal advise.

Oddly, you can tell people something is illegal all day
long and suffer no liability.

Caution is advised when dispensing legal advice.

Obviously logic is in the eye of the beholder...Thousands of people love their FT-50s and have had every conceivable accident. They all seem to be real happy because theirs didn't break. Logic tells me you bucked all the odds and bought the only two that are pieces of shit. That's not logic, Dude, it's karma.

Logic also tells me that if you can't fan the flames your way you should drop the whole thing. Obviously not many people agree with you. By the way, I had mine on the dashboard of my car as I made a sharp turn. It flew out of the window of my car while I was going about 35 mph. It seemed to be traveling much faster than that... sideways...It hit the pavement, bounced over the curb and skidded across the sidewalk, into the side of a building. I came to a halt, jumped out of the car as it was being picked up by a little kid that had narrowly missed being kneecapped by it. He heard a repeater call and wanted to know all about ham radio. He thought it was cool that you could do that to a radio and it would still work. The radio, though scratched, is fine.

Cross-posted to: alt.radio.pirate,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Yes, and you can particpate...

The awards will consist of 4 sections:

1. Jammer of the Week:
Person who jamms the most, or who is just a pain to the listeners. (Joesph Stalin Award)

2 Most improved Jammer:
The Jammer who makes an inpact over his previous week's operations. His jamming may not nessaceily be a high powered signal, but is a bigger annoyance from last week. (Benito Mussolini Award)

3 Net Member who can endure:

This award will go to the Liberty Net Member who can demonstrate beyond a doubt, endure the Jamming, tape playing, Tarzan Yells etc, and still can be heard reasonablely, (George Washington Award)

And last but the not least of these:

4. Jammer of the YEAR!!!

W9ART himself wanted this, but he will have a long ways to go, I'm gonna wait till October for this, till the band gets better come fall, when we can better judge this, but keep voting..

This is how I want to do the Voting, send me a E-mail to n0vfp@qsl.net in the subject header put "3950 awards" and in the body put the section (1-4) and put the name or call of the person. ONLY VOTE ONCE per section. per week

> active
> practice.
>

That definition, obviously recent and incorrect (though it is "politically correct"), conflates several quite separate things.

Racial "discrimination" merely means choosing between races for some purpose. For example, when the founding fathers of America instituted the Naturalization Act of 1790 (in effect until treasonously abrogated in 1952), which explicitly stated that only members of the European race could become citizens of the United States, they were certainly _choosing_ in that sense. They were trying to ensure the practical fulfilment of what had been stated in the Constitution: that this new nation was for their "sacred posterity" -- that is, the actual lineal descendants of the European men and women making up this nation. They _chose_ not to give the new nation, purchased at the cost of so much blood and toil, to others.

If you are an American basketball coach engaged in a bidding war to award "scholarships" to some of the lengthier African tribesmen, you too are engaged in racial "discrimination," though of the crassest commercial sort.

Racial "segregation" is, of course, the state of affairs which obtained between the races for millennia before the advent of Marxism and its offshoot and related universalist doctrines. Absent laws forcing their association, the vast majority of the members of all human races segregate themselves quite naturally. An examination of high school lunchrooms -- or metro area neighborhoods -- in "racially diverse" areas will easily confirm this.

Before the racial "equality" nuttiness came on the scene, people organized their societies that way naturally without even thinking about it. Even today, Whites who are as "liberal" as you can get without actually being off your rocker still make housing purchase decisions in

a manner absolutely indistinguishable from members of the Ku Klux Klan.

It's unconscious. It's biological. And it really has nothing to do with "hate" -- and everything to do with divergent evolution.

As far as "persecution and domination" are concerned, I'm absolutely against them. They implicitly assume a multiracial society. Feel free to correct me if you can think of any examples, but wherever two or more races are required to live under the same government, there is always racial conflict, and claims and counter-claims of domination or "unfairness."

Once every race has its independence and freedom, and its own territory, such things will be as rare as racial conflict is in Iceland or Japan today.

> So of the various types of racism practiced by white people in the
> past
> century, which types of "persecution and domination" do you support?
> Laws forbidding racial intermarriage? Seperate "white" and "colored"
> drinking fountains?

Laws forbidding racial intermarriage were, as Jefferson stated, an unfortunate necessity because of the proximity of the races, unless one was willing to accept the genocide, by mixing, of one's own race.

Jefferson, along with many other founders and also Abraham Lincoln, thought that the best answer was racial separation on a continental scale: that is, repatriation of the Africans to the land of their ancestors, or, in the interest of economy, their transportation to the island of Santo Domingo in the Caribbean.

> Certainly not genocide, I hope.
>
> In my opinion, the racist acts of whites in this century are indeed
> wrong
> and shameful: lynch mobs, murders of Civil Rights workers, the
> Holocaust,
> etc. (Are you a Holocaust "revisionist" also? I've got a Jewish
> friend
> who lost dozens of her Polish ancestors in the Nazi death camps: the
> murder of millions of Jews is a historical fact.)
>

No one denies that large numbers of Jews died in World War II. But it does seem odd that every schoolchild can recite the alleged number of Jewish dead -- but very very few can give you the number of Americans who died. Or Germans, Russians, Britons, or Italians for that matter. Can you, without looking them up?

And it does seem _most peculiar indeed_ that the other genocides of this century, such as that of the Ukrainians, or that of the Chinese (both of which certainly equalled or exceeded Jewish losses), are not

commemorated with "Holocaust Museums," docudramas, reparations, endless books, repayments of "looted gold" or other wealth, Hollywood films, chairs at major universities, et cetera, et cetera.

> : The founding fathers of the United States, for one example, were

> views of racial seperation?
>

The writings of the founders, and of Lincoln, indicate quite clearly their true intentions, though this has been largely hidden from you by the lying media and school system.

Just to get you started:

From President Abraham Lincoln in one of the famous Lincoln-Douglas debates:

"I will say, then, that I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races -- that I am not, nor ever have been in favor of making voters or jurors of Negroes, nor of qualifying them to hold office, nor to inter-marry with white people; and I will say in addition to this that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality."

Next from his "Notes for Speeches," September 1859, Collected Works, Vol 3, p. 399, we read the words of Abraham Lincoln:

"Negro equality! Fudge! How long, in the government of a God great enough to make and maintain the Universe, shall there continue knaves to vend, and fools to gulp, so low a piece of demagogueism as this?"

From Abraham Lincoln's "Address on Colonization to a Deputation of Negroes" in Washington, D.C., on August 14, 1862 (Collected Works, Vol. V, p. 371) we read the following:

"See our present condition -- the country engaged in war! -- our White men cutting one another's throats... and then consider what we know to be truth.

"But for your race among us there could not be war, although many men engaged on either side do not care for you one way or the other... It is better for us both, therefore, to be separated....

"You and we are different races. We have between us a broader
difference than exists between almost any other two races.
Whether it is right or wrong I need not discuss, but this physical
difference is a great disadvantage to us both, as I think your race
suffer very greatly, many of them by living among us, while ours
suffers from your presence. In a word, we suffer on each side. If
this is admitted, it affords a reason at least why we should be
separated."

From Thomas Jefferson's autobiography, first published by his grandson,
Thomas Jefferson Randolph in 1829 and again published by special Act of
Congress in 1853; I quote from page 51, dated January 6, 1821:

"Nothing is more certainly written in the book of fate than that these
people [the Blacks] are to be free; nor is it less certain that the two
races, equally free, cannot live in the same government. Nature, habit,
opinion have drawn indelible lines of distinction between them. It is
still in our power to direct the process of emancipation and
deportation, peaceably, and in such slow degree, as that the evil will
wear off insensibly, and their place be, pari passu, filled up by free
White laborers. If, on the contrary, it is left to force itself on,
human nature must shudder at the prospect held up."

From Jefferson's _Notes on the State of Virginia_ (1781, Query XIV):

"Among the Romans emancipation required but one
effort. The slave, when made free, might mix with,
without staining the blood of his master. But with
us a second is necessary, unknown to history. When
freed, he is to be removed beyond the reach of
mixture."

There is _much_ more material on this subject, if you are interested.

Suffice it to say that, prior to the last few decades, America was
essentially a racial separatist society, and most of the founders and
major figures of the Old America were in fact racial separatists.

The successor regime that now rules us holds views opposite to the
founding fathers on race -- and on a lot of other things, too. The mass
media and public schools are not telling the truth on these subjects.

....
> A poor white person born to an
> unstable family of missing parents, substance abuse, criminal
> relatives,
> and with no encouragement for education and achievement, will be just
> as
> likely to become involved with crime and violence, as will a person of
> another race.
>
....

The very poor state of West Virginia, which has relatively little in the way of education, and much in the way of alcohol and guns, has a very low crime rate. Is there even a tiny possibility, in your mind, of this having anything to do with the fact that West Virginia is nearly all White? Or do you accept racial equality as an axiom, with every real-world difference between the races always explainable by some other factor?

Before you answer, let me help you by reminding you how unlikely it is that the races are equal in intelligence or any other characteristic:

In the real world of matter and energy, which is the only world there is, equality (except in an abstract mathematical sense) is virtually unknown above the molecular level.

With happy June wishes,

Kevin, WB4AIO.

Why don't *YOU* grow UP and accept responsibility for *YOUR* actions
instead of *Crying* about Yaesu? It was *YOU* that dropped the radio.
When *I* read Yaesu's advertisements regarding "mil-spec" I think in

terms of vibration tolerance, temperature/moisture/humidity extremes etc. *I* don't translate that into being able to *clumsily* drop the radio and expect it always to survive, if you did perhaps that's your folly.

You come cross as a little boy that's dropped and broken his toy and when he doesn't get sympathy from his fellow hams he derides them as "a bunch of Joe hams." Why don't *YOU* grow up and accept responsibility for your clumsiness ??

FWIW: if *YOUR* logic is so *superior* to the "bunch of Joe Hams" you're free to take your crying to alt.intellectual

Gary K8IQ

* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* How do I become an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and _"Amateur Radio Elmers Resource Directory [*-Z]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Jon Bloom KE3Z

Jon Bloom, KE3Z | jbloom@arrl.org
American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

QEX Editor

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for

web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

During the school year, I am in Baltimore trying to set up a college ARC at University of Maryland, Baltimore County. During the winter and summer, I am in New Jersey. I am active in ARES/RACES/NTS and local clubs in both areas, and would be glad to help other young people get into the hobby of Amateur Radio, particularly in the interests of Public Service and Disaster Management.

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I have been a radio amateur since 1954, first licensed as KN2HYZ in Peekskill, New York at the age of 14. I have been active in periods ever since, never losing the ham spirit.

I would like to be involved in helping young people start in ham radio. Especially those who are already licensed and are "lost" looking for ways to operate or set up a station.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can

also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

http://www.radiodesign.com/

Assistant EC for Josephine County (Oregon) ARES/RACES

I am involved in commercial RF and wireless design, and willing to share experience with other amateurs. I have a complete test equipment facility for checking radios, antennas, etc.

Local NEWSLINE outlet: Program airs on the 147.30 repeater right after the Monday night net.

I am active on HF, VHF and UHF, including voice and digital modes, and will help in whatever areas I can for most of Southern Oregon.

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Extra class operator. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.qsl.net/tcarc-ntx/

and am the President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

The TAPR Software Library is now available via anonymous FTP. You can access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and your_first_name and your_last_name are your first and last names, respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Alan Larson WA6AZP

larson@net.com
larson@w6yx.stanford.edu

My areas are fairly general, and I teach classes (Novice and Tech, with and without code, and upgrade sessions) at W6YX. My main audience is to the Stanford (University) community.

I am also involved with some less common modes, such as fast scan television and weak signal VHF and UHF.

Zack Lau W1VT

Zack Lau W1VT Expertise: Design of SSB/CW amateur transceivers
c/o ARRL Lab : up to 222 MHz. Design of transverters
Newington CT 06111 USA : up to 10.5 GHz. Basic lossy filter
+1 (860) 594-0200 : design. Developing repeatable projects
zlau@arrl.org : using cheap, easy to get parts.

I'm now starting to look into 24 GHz SSB/CW gear using 10 GHz as a convenient IF.

Especially looking to help anyone wanting to be a QST/QEX author--I can't write it all myself!

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100
callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly
into the QRZ! Callsign Database, where it will be published on both
CDROM and on the Internet. When you use this page, your E-mail address
is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is
now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can
begin operating as soon as your callsign shows up in the online
database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail
address above.

Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials

are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Morse Code
* HF

* Homebrewing
* NTS
* Packet and Digital Networking

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message BODY. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message BODY:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for
Elmering received over the years as I came into Ham Radio. I am a VE
for VEC's active in local area. I am most interested in assisting
young, old, and handicapped persons to discover Ham Radio. However, I
want to help anyone that is committed to getting a Ham license or

upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

]

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with

the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

* BBS's
* IBM PC's
* MUD's
* Packet and Digital Networking
* UNIX

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have

the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to

Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

Proudly hosting the following World-Wide Web Pages:

* Novice Notes Online
* Amateur Radio Ideas Page
* ACT Sustainable Transport Working Group Home Page
* Australian QRP Home Page
* Peter Parker's Projects Page

Following feedback from readers, I'm pleased to announce further improvements to my World-Wide Web Page.

The main change is the use of .gif images for the schematics and other diagrams instead of .bmp files. This dramatically reduces the size of the files (10k vs 141k). Also, it is now possible to view the schematics online.

Recently added is information on a simple 2m antenna for portable use. Information on other projects will be added as time permits.

You can get to these pages via the URL above.

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

Keith Petersen W8SDZ

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net
aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our

county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines

contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Volunteer Examiner (Laurel and W5YI VEC)

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also John Seney for FAQ maintenance opportunities). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.3, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message BODY. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

When we have mixed our gene pools enough, probably 10 or 20 generations from
now, we will all be pretty close to the same color. End of the race issue.
Interbreeding between races improves genetic vigor and dilutes race-specific
defects, like sickle-cell anemia or the inability to play basketball. I am
doing my part, as often as is practical. Not only is that good for the HUMAN
race, but it's a hell of a lot more fun than going to klan rallies or cross
burnings.

Download SUPERMORSE from my site, url in the sig. Then set up the program, set your parameters, have it send random groups or plain random words or a text file of your choosing, and record the output. The program is shareware. It uses the PC speaker and does not require a sound card. With this program you can have as much sample audio at whatever speed you want.

Source record: 171014

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <658>

.....
>From the Editor's Desk:

Welcome to our new ACS Newsletter members!

We appreciate your input regarding the loss of the Galaxy IV satellite and its impact on emergency services communications. We have written an article for 9-1-1 magazine that will be published in the next few weeks on the situation; when it comes out, it will also be published on the Web on the 9-1-1 magazine website. You'll see the Internet URL for the article in a couple of weeks.

We'd like you to send us some input on your agency or organization, which we'll highlight here each week. We'd like to know:

-Where you're located
-Who you're affiliated with
-How many members do you have
-How does your organization use emergency communications

send your organization's profile to larton@garlic.com

Thanks in advance for the input!

Speaking of input, ACS Listmaster has a reminder for us below that you should take a moment reading. When we ask you for a reply (on a mailing list with 650+ members), we can have a sudden avalanche of mail in the IN basket. Mark occasionally tests the system with a test message; please don't respond to the IGNORE ME message. The IN baskets get completely flooded with mail and it actually can crash the list. Thanks for the help!

Stay safe, everybody - see you next week! Dave Larton, Editor
.....

>From the mailbag:

(A note from our friendly neighborhood ACS Listmaster,
Mark Hartman):

From: Mark Hartman <mh@harthaven.com>

Dave:

Would you please pass the following along to the list.

"Please ignore" means "please ignore"

Due to some Internet congestion recently, some of the newsletter mailings had some trouble getting out. When this happens, our listserver program automatically generates a "test" message to make sure that the condition that caused the problem does not mean that someone has terminated their Internet account.

The test message contains the line:

>Please ignore this message from the acs-newsletter list! Thank you.

What this means, surprisingly enough, is that you should IGNORE the message. Please don't respond to it; if you do, it goes to an address that the server gets problem reports at, and you may wind up getting automatically unsubscribed from the list.

Moral of this story: If it says to ignore it, it please do so.

Thanks, Dave.

Regards
Mark Hartman
.....

Current Events:

From: Mark Foster <mfoster@shore.net>

The following information is excerpted from "GPS World"
September 1997: "GPS Rollover: Compliance Efforts Under Way".
Article written by Capt. Al Johnson
US Air Force
NAVSTAR GPS Joint Program Office

THE TWO ROLLOVERS
The Y2K rollover potentially affects GPS's ability to properly handle dates after the calendar "rolls over" into the next millennium from midnight, December 31, 1999, to January 1, 2000. The Y2K situation presents a problem because most computer systems identify years by only the last two digits. Thus, they are likely to interpret any year as a twentieth-century data. Other systems may acknowledge the twenty-first-century date but consider it invalid.

End-of-Week Rollover. What many people are unaware of, however, is that GPS faces a second, earlier rollover for its End Of Week (EOW). The Global Positioning System, rather than record time in calendar years, monitors it by counting weeks. (This method was developed because the pseudo random noise codes in the satellite signals repeat themselves in one-week cycles.) As far as the system is concerned, time began at 0000 Universal Coordinated Time (UTC), January 6, 1980. The GPS weeks are grouped in epochs that last 1,024 weeks. Beginning with week zero, the GPS counter continues until the end of week 1023. At the end of that week, the system returns to week zero.

GPS is scheduled to experience its first EOW rollover at 0000 UTC, August 22, 1999. The July 1993 update and subsequent versions of the GPS Interface Control Document (ICD) clearly state that "at the expiration of GPS week number 1023, the GPS week number will rollover to zero. [The GPS equipment manufacturers] must account for the previous 1024 weeks. . ." The GPS EOW rollover will occur 132 days before the millennium rollover. Improper accounting for the EOW rollover could adversely affect a GPS receiver's computation of position, velocity, and time.

For most users, the concept of a properly functioning GPS revolves around an operable receiver unit. Based on the way the documented guidelines require receivers to be built, neither the Y2K nor the EOW rollover should cause problems for a GPS unit.

{End of Excerpts}

The article discusses the three major parts of the GPS:
1. Space Segment - Inherently, no Y2K or EOW problems here. However, some ground support equipment does have some problems. This equipment is scheduled for replacement before either rollover occurs.

2. Control Segment - A considerable amount of equipment here will experience rollover problems, but this segment is also scheduled to be corrected or updated before the rollovers occur.

3. User Segment - As stated earlier, the GPS receivers will not have a problem if properly built. Larger systems which include GPS receivers _may_ have a problem, but that determination and correction, if necessary, is the responsibility of the system owner and/or manufacturer.

What's New on the Web:

CHILDREN IN HURRICANE STATES CAN LEARN ABOUT DISASTER PREPAREDNESS THROUGH THE FEMA FOR KIDS WEB SITE

May 29, 1998 - Children and teens aged eight to 18 can learn how they and their families can best prepare for hurricane season by visiting the FEMA for Kids Web site at www.fema.gov/kids. This web site of the Federal Emergency Management Agency (FEMA) uses games, songs, stories, jokes and other kid-friendly content to interest youngsters in disaster preparedness and risk reduction activities they can do themselves.

The site is designed so that Internet-savvy youngsters can negotiate it without an adult, but it is also useful as part of a school disaster awareness curriculum. Users that take a specific series of quizzes and finish certain exercises can become a "Disaster Action Kid", and receive a certificate from FEMA Director James Lee Witt. Parents and teachers visiting the site can find useful information and curriculum, and can subscribe to an E-mail list.

Family preparedness information is available under the "Get Ready, Get Set" icon while specific hurricane information is under the hurricane icon in "The Disaster Area". Artwork and writing from children who learned about hurricanes firsthand from Hurricane Fran is available under the "Disaster Connection: Kids to Kids" icon. Users can find out what disasters are possible in their state by clicking on the map, found under the "What's Happening Now" icon.

The FEMA for Kids Web site averages 250,000 hits per month. It debuted in October 1997 and is updated regularly. It joins the main FEMA Web site (www.fema.gov) as a significant source of disaster preparedness information for the public.

This week's EMCOMM Bulletin:

EMC135 Words, Words, Words!! 2/4 For release 6/1/98

(Topic continues from 134)
How, then, do we successfully communicate our ideas? When we write one of these bulletins how can we assure that you will grasp what we have in mind? Well, truth be told, we cannot do that, nor can you. We do the best we can with the media form and live with the consequences. No matter how careful our word and phrase selection, without face-to-face opportunities it's possible the message will be interpreted differently than intended, as the tone and body language are missing.

And even with in-person communications we still cannot be certain that our thoughts were clearly understood by the other person. At one point in my career I was an escrow officer with a title insurance firm dealing with real estate title transfers. It was a large office, 30 foot counter staffed by a group of us. That particular day a distraught customer came up to the counter and laced into me and the company about some problem. The more he shouted and complained the less I knew what was the problem. Then, I did something I'd never done before or afterward. I slammed my fist on the counter, and loudly said, "Stop it. Stop it!" whereupon 50 people in the office looked up in alarm, thinking I'd lost it. Then, I added, softly, "Now let's start all over. I don't know what you are talking about. Please start again". Well, it cleared the air, and we effectively communicated and went on to solve the problem. But, in order to do so it was necessary to clear his mental slate so he could clearly explain the problem.

Once the emotions can be calmed down an effective means of interpersonal communications can be: "Can you cover that again, can you explain that differently?" Or "I thought you said ..." Or "would you amplify on that?" It's fairly easy to do that in face to face conversations, and to some degree, on the telephone.

What about voice radio and telephone? In voice media it is somewhat easier to ask probing and interpretative questions. Even so, that can be difficult for those of us whose emotions are triggered to where we become angry because of a tone of voice or something -- sometimes we're not sure what it was that made us angry or whatever caused us to close our mind to the real content of the message and hear only what caused our reaction! After that we seldom hear or see anything that is said (or written) once our response crystallizes in our mind.

3710. EMCOMM Bulletin 134 (fwd)

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-01 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.980601073042.22179B-100000@diamond.sierra.net>
Source record: 171015

Oops...we goofed!
We got a little ahead of ourselves and got our dates mixed up.
EMC 135, which came in this week's Newsletter, is actually
scheduled for next week. EMC 134 follows...

EMC134 Words, Words, Words!! 1/4 For release 6/1/98

Communication is usually considered to be a process of passing
intelligence from one person to another. With radio and Email we
use messages comprised of words and transmitted by voice or
digital means. With telephones we use words heard by another
person, and with television we use words, sounds and pictures to
communicate.

But do we really "communicate"? That is, do we "communicate"
the essence that is in the mind of the person originating the
idea, concept, phrase, sentence, paragraph or picture?

Do 100 people always interpret the same visual picture exactly
the same way? Do the same 100 people always interpret the same
Email in similar ways? What about a radio message, a handwritten
letter, a typed letter, or a telephone conversation?

How many times in your life have you known for certain what you
stated or said to someone else, only to be astonished at how
they "heard" it in a totally different way? Or didn't hear it at
all? It's like people hear selectively.

Why is that, do you suppose? Perhaps combinations of words,
idioms and phrases "trigger" concepts and beliefs filed away in
the cupboard (or storehouse) of our mind, causing us to not hear
certain words or see certain facts?

At one time a study on how people communicate determined that
humans do so with words (7%), tone (28%) and body language (55%).

Now, let's consider Email and digital messages, which are words
without tones or body language. According to that study, then,
with Email (words only) we communicate about 7% of the time.
That being the case is it any wonder, that "flames" result?
(Flames are emotional responses slamming another person for
"perceived" concepts that may or may not be intended in the
original message.)

3713. Re: Marine Radio License

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-02 00:00:00 UTC
From: mgilbert@csi.compuserve.com
Message-ID: <#alNXYjj9GA.289@nih2naac.prod2.compuserve.com>
Source record: 170868

For non-commercial use a station or operator license is no longer
required. It used to be, at a cost of like $50 for 5 years or
something reasonable like that; however, about two years ago the FCC
tried to raise that to like $500 for the 5 years or something
very unreasonable. A bunch of recreational boat lobbies got on
the bandwagon and now you don't need anything. Personally I
liked the old $50 system myself, it at least gave you a call sign
and a piece of paper.

Someone mentioned the fact that there is no enforcement. Well
maybe not on the HAM bands, but if you screw around on the VHF
marine freqs. the COAST GUARD is authorized to kick your ass.
This includes anything from a citation to confiscation of your
boat - this is because bad radio practice is considered a
maritime safety issue which gives the coast guard all the
reason in the world to kick you around. Of course, this assumes
you are operating in waters that the coast guard is in.
However; I do know of a case where an operator was using his
handheld VHF on a small lake (not under coast guard jurisdiction)
but it was quite close to Lake Erie - they busted him anyway
because he was a safety hazard to those operating in Lake Erie
(which is under coast guard jurisdiction). BTW: the coast guard
takes this stuff quite seriously.

The single largest problem we have seen with the VHF marine
bands was about a year or two ago, truckers decided to start
using them as CB's because they had much better range. That
seems to have died down now but I do not know if something
was actually done to stop it.

Reality check, Drew. You don't post your name or call either.

All philosophical differences aside, Kevin's views would be more readily
received on certain other newsgroups. I am sure he knows that too, and in the
interest of harmony and productivity will post his views on race elsewhere,
where they are more relevant. Perhaps Casey's rebuttal was a bit rude and
overemotional, but his outrage is understandable even if his sense of restraint
could be improved upon.

You lose again, Drew.

If not, they should be. I personally do not keep QSLs and have no interest in "awards", but I'll throw my opinion in the ring.

Anyway, how would you tell the difference? Print the file, cut it out, and submit it. Who knows how it got to you in the first place? It could just as easily have came in an envelope. The QSO did take place, after all, and both stations should have it in their log if anyone should question the veracity of the QSL.

A rule is only a good one if either it is enforcible or if it is sensible enough that everyone follows it as a matter of course whether enforced or not. I think this should be the PREFERRED method of QSLing since it is so fast, effecient, and cheap.

I don't think that will happen; after all doesn't the FCC allow the use
of CW on all the Ham Bands. I guess they'll allow the use of CW across
all the Ham User Groups. <smile>

>synchronize all their transmitters to be in phase.

I'd be very surprised if that were true. I haven't seen sat dishes at most paging transmitter sites. Generally, paging systems with multiple transmitter sites use GPS for synchronization. Cell sites do too. That only requires a small patch antenna.

The central control site of a multisite paging system has a dish to receive skypage data from SCPC satellite signals. That's distributed to the individual paging transmitter sites either by terrestrial relay or by phone line.

AFAIK the reason G4's loss caused a wide scale outage is that the major paging companies have consolidated their paging centers so that only one, or a few, exist nationally. These send the page requests via SCPC satellite links to the central sites of local multisite paging systems. With G4 down, the links to the paging systems failed. So it wasn't hetrodyne interference that shut down the paging systems, it was inability to convey paging data from the national paging centers to the appropriate local area paging systems.

The few remaining independent local paging companies didn't suffer outages. They still have local paging centers to receive the page requests, and communicate paging data to their local paging transmitter sites terrestrially.

>I've never grokked how multiple transmitters on the same freq did
>not create heterodyne interference out the ying-yang.
>
>Is there anyone here who really know how this multiple-transmitter
>scheme works? I can make wild guesses but....

They are synchronized. A number of companies make disciplined oscillators which are controlled by special GPS receivers. One of these is used as the master oscillator at each paging transmitter site. With all the paging transmitters in a system locked together, hetrodyne interference is eliminated. But there are still stationary interference (physics meaning) pattern peaks and nulls in mutually covered service areas. Transmitter locations and antenna patterns are chosen to put the nulls in low traffic areas (when possible).

Wow... what a bummer. I could see a smaller fee, or maybe a
lifetime-of-the-vessel license for small pleasure craft, but there really
should be some kind of license. People are more careful about abusing a
privelege if they have to do SOMETHING to get it, and if they know they could
lose it, specifically those who know nothing of the rules and traditions of a
particular band or mode.

I do hope a coast station license is still required, though, for transmitting
from a shore site.

I heard a "mayday" (as in "Mayday, mayday, mayday!" The Mayport Coast Guard
station answered) on 16 a couple of years ago going up the St Johns to Blount
Island Terminal, downriver from Jacksonville. The caller was at a small dock on
the river and was out of gasoline for his outboard. Bozos like that should be
severely slapped, keelhauled, made to stand in the corner for an hour, and
forbidden to even say the words "radio" or "boat", much less be allowed around
one of either. Non-licensed use , sad to say, leads to a greater occurence of
un-educated use. Even an open book test at least forces the licensee to read a
few rules and definitions once, and serves notice that there ARE rules that
must be followed, even for an emergency like being tied up at a dock with no
fuel.

Ships, tugs and barges, and other vessels, often carrying extremely dangerous
cargoes, rely heavily on VHF frequencies for safety of lives, property, and
environment. As a professional mariner, I would like to take this opportunity
to ask users of the marine VHF channels to PLEASE keep calls short on 16, use
13 only for making passing agreements, immediately switch to a working channel
after making contact on 16, and LISTEN before keying that mic. The life you
save could be your own.

Hello
I have a TS 440SAT For Sale or trade. I will take $500.00 or a SB 220
Heathkit Amplifier for the radio. The radio comes with handmic and DC
power cord. I don't have the manuel. On a scale of 1 to 10 the radio is
a 6. It would make a great moblie rig.
email me if you are interested.

The truckers simply moved to the low end of 2-meters. I hear them all the time between 144-145Mhz. The Coast Guard ran them off of marine frequencies, but they know the FCC could care less about their usage of the ham bands.

Some circuits of simple HF receiving equipment, covering the 80 and 40m
amateur bands, appear on Peter Parker's Projects Page. This is
accessiable via the URL below. However, computer Morse decoders are
not often as good as the human ear for noisy signals, and there may be a
need for audio filtering to be added to the receiver.

Hi everyone,

My name is James and I'm new to this group. I'm an electronics student at a local community college and am taking project fabrication this semester. We have to build a project of our choice.

I have always been interested in Amateur radio, and decided that I would like to build a simple receiver for this class. As a way for me to get started in the world of amateur radio and for my class project.

Anyone have any suggestions on a book and places to buy kits from??

Thank you for your time,

Jimmy_Nelson@Bigfoot.com

SB QST @ ARL $ARLB040
ARLB040 ARRL files against LMCC

ZCZC AG40
QST de W1AW
ARRL Bulletin 40 ARLB040
From ARRL Headquarters
Newington CT June 2, 1998
To all radio amateurs

SB QST ARL ARLB040
ARLB040 ARRL files against LMCC

The ARRL has asked the FCC to immediately dismiss efforts by the Land Mobile Communications Council to gain primary access to 420 to 430 MHz and 440 to 450 MHz as well as other UHF allocations. The LMCC recently petitioned the FCC to reallocate the two 70-cm segments from the federal government to the Private Mobile Radio Service. Amateur Radio enjoys the use of 420 to 450 MHz on a secondary basis. In comments filed on RM-9267, the League said the LMCC proposed the switch ''without establishing technical compatibility between PMRS operation and incumbent radio services in any of the bands sought.''

The League said that existing federal government use of the spectrum precludes PMRS operation at 420 to 450 MHz. According to the ARRL, the petition fails to demonstrate any basis to withdraw the two band segments from federal use nor any compatibility between PMRS operation and either federal government or Amateur use. In addition, the League said, the petition fails to justify displacing established amateur operations. The League pointed out that the amateur community uses the band for public service and public safety functions and that hams have ''substantial personal investment'' in equipment that's in regular use there. The ARRL urged the Commission to throw out this portion of the LMCC petition ''without further consideration.''

The League backed up its arguments by citing documents from the National Telecommunications and Information Administration (NTIA), which manages federal spectrum. ''NTIA has made it quite clear that there is no possibility of additional sharing of the 420-450 MHz band, and the unique relationship between Federal radiolocation uses and the Amateur Service cannot be duplicated by PMRS users,'' the ARRL said.

The ARRL said that the LMCC petition was premature because it did not take adequate account of the benefits of spectrum refarming already initiated. The League said PMRS users should adopt already available spectrum-efficient technologies to maximize their use of existing allocations before seeking additional spectrum at the expense of other users. The League also said that PMRS users should look into using the Commercial Radio Mobile Service (CMRS). A copy of the League's comments is available at http://www.arrl.org/news/bandthreat/RM-9267/arrl-cmt.html.

Removed from antenna, digital, dx, equipment, and homebrew.

I suspect Burt is really starving for attention since he's cross posted to newsgroups that have nothing to do with the topic.
That's not surprizing though comming from Burt, really cute Burt, all this from a grown man who teaches children. What a great example you set for the teens on the newgroup. I'm mad about loosing my VE status so I'm going to pout and cross post to all the ham newsgroups.

One thing we can all be thankfull for is that he DID loose his VE status and will never get it back. You can rave and rant all you want Burt, but the bottom line is YOU GOT SCREWED out of your VE status. Clearly someone at the ARRL/FCC must be paying attention.

> >[Begin quote from "National publication"]:
> >
> >As far as international goodwill, most hams rarely

So? Did you ever consider that the foreign station may not be interested and also wants to just make the contact?Probably not, you don't seem to consider anyone else, just what Burt thinks is right and wrong.

Tim

Yup. It's an el-stinko society we live in.

hi all, i am having some telephone interference problems with the neighbors, and modular filters havent solved the problem. i use a uniden cordless in the shack and have never had a problem with it. i tried it at their house and it worked fine; no interference. the model i have has been discontinued (and it was $70, which is a little more than i want to spend per phone). are there any phones out there that are really good at rejecting rfi? i read that radio shack made one, but that has been discontinued also. thanks for any help
please respond thru private email

3749. NCI files comments with FCC against LMCC's 70cm spectrum grab

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-02 00:00:00 UTC
From: "Carl R. Stevenson" <wa6vse@fast.net>
Message-ID: <01bd8e81$62f09020$0100005a@wa6vse>
Source record: 170904

NCI filed comments against the LMCC's Petition for Rulemaking
to the FCC, seeking the reallocation of 420-420 MHz and 440-450 MHz
from Federal use to the Private Mobile Radio Service (PMRS) on
a primary basis.

Amateurs have, for years, occupied the 420-450 MHz band on a
secondary basis and amateur sharing with Federal Government
users has been very satisfactory.

While the LMCC proposed that amateurs retain secondary status
in the 430-430 MHz and 440-450 MHz band, it is apparent to most
that widespread sharing between PRMS and amateurs is not feasible.

NCI's comments in RM-9267 can be read at the NCI web site at:
http://www.nocode.org

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.equipment

I just today discovered a slew of new amateur radio related newsgroups in the alt.*** hierarchy, no fewer than twelve (12)!!! They are:

alt.ham-radio.am/binaries/dxing/exotic-modes/flame/fm/hf/mods/morse/packet/ssb/vhf-uhf

When did this happen? Have a look, and tell your ISP to subscribe if you can't now get them.
You can always read/post to them via www.dejanews.com in the meantime. More bandwidth, yay!

SB DX @ WW $OPDX.359
Ohio/Penn DX Bulletin No. 359

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 359
BID: $OPDX.359
June 1, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1DG, N2AU, WB2RAJ/WB2YQH & The 59(9) DXReport, W4ZYT, WD8MGQ, N9WDQ, ER1AA, F6AJA & LNDX, G3SWH, G4BUE & DX News Sheet, GM3WOJ, IK1QBT, RV1CC, SQ5HAR, US1I, UT5RP, VK4AAR, XE1L and ZL1BMW following DX information.

A6, UNITED ARAB EMIRATES. Don, N1DG (ex-WB2DND), reports he will be active again June 1-7th. He is mainly in A6-land on business and as time permits he will fill in the off hours from A61AD. He will be in Dubai for 6 days with a heavy work schedule. He plans to be active on RTTY (his primary hangout will be 14.090 +/- QRM). He will also be on 30/17/12 meters and RS12. He also mentions that he is planning to meet with A61AQ and get the logs from him for the first time EVER. So, all you guys waiting for QSLs, please be a little bit more patient. QSL via home call.

CHECK YOUR LOG BOOKS. Jean Michel, F6AJA, from the French LNDX Bulletin, reports that ALL contacts made by Gerard, F2JD, from Cayos Cochinos during May 16th to 19th, as HR3/F2JD is from IOTA NA-160 "NOT" NA-057. By mistake Gerard started his activity as HR6/F2JD an gave NA-057 as IOTA reference. All the contacts were made from Cayos Cochinos. Gerard says, "I am very sorry for my mistake but I haven't my IOTA list with me".

EI2, IRELAND. Don, W4ZYT, will be here June 13-25th as EI2IM. He will be operating 40-10 meters, mostly CW. He is planning a short stay on Inishmore, Aran Island (EU-006) about midway through his trip. He will probably use the callsign EJ2IM. QSL via W4ZYT.

ER3, MOLDOVA. The IARU Region 1 Field Day HF Contest will take place between June 5-7th. Look for ER3R/p to be active from here. QSL via ER1DA: P.O.Box 9537, Kishinev MD-2071, MOLDOVA.

GB5, SCOTLAND. Advance notice has been given that GB5HQ will be active in the IARU HF Championships July 11-12th. This will be the first time

from Scotland that the R.S.G.B. Headquarters station, GB5HQ, will be activated by the North of Scotland Contest Group (GM2MP/GM7V/GM8V) as a Multi/Multi station during the IARU HF Championships from the QTH of GM3WOJ near Tain in the Highlands of Scotland.

H75A DXPEDITION FINAL WRAP UP. Mike, AD5A, reports, "The H75A operation concluded at 1515z on Sunday, May 24th, after 63 hours of operation and 6,914 QSOs from Isla De Venado, Nicaragua (IOTA NA-209). The team had planned to stay on the air until 1200z on May 25th, however, monsoonal rains forced the early departure from the island. The expedition team made the decision to use paper logs and so the logs will need to be entered in a logging program over the next couple of weeks. Once entered, the logs will be posted on the IOTA Web page at: http://islandchaser.com QSL via N5FTR: William Loeschman, 717 Milton, Angelton, TX 77515"

HZ, SAUDI ARABIA. Mike, K3UOC, has gone QRT after last weekend's CQ WPX CW Contest as 7Z5OO and will be returning to the USA. He has made over 110,000 QSOs from 7Z5OO. He was the most active station from here, and the only other active CW stations left are HZ1HZ (mainly a contests station) and HZ1AB (which has been very quiet lately). QSL via N2AU. Do not QSL via W1AF.

IOTA NEWS.....
EU-083. Operators Tony/IK1QBT, Nino/IK1ZOZ, Alex/IK1OXF and Franco/I1FX plan to be active from one of the rare islands in the Ligurian group. The Italian team will activate Gallinara Island between June 6th-7th and 13th-14th. Operators will sign IA1/homecall and activity will be on all HF bands SSB/CW (WARC included) around the standard IOTA frequencies. There will also be activity on 6 meters, VHF/UHF on SSB. The reference number for the Italian Island Award (IIA) is SV-01. Gallinara is a private island, and the daylight visit is very restricted to only Island Archeologic and Biologic presence. EU-083 is the most wanted IOTA in North America because of the difficultly to stay and operate during the night. QSL via their respectives home calls, bureau or direct.

EU-133. Members of St.Petersburg and Region Association of Radiocommunication (RV1AC, RU1AS, RV1CC, RZ1AZ, UA1ANA and RA1ACJ) are going to be active from Bolshoj Berezovyj Island, June 5-7th. Their activity will include the IARU Field Day Contest, as RK1B/p in a Multi/Single category. Before the contest look for them to sign homecall/p. Activity will be on all bands using a IC706 and TS940S with amp, GP for 40-10 meters and an Inverted L for 160-80 meters. QSL via homecall, but RK1B/p via RV1AC.

NA-079. The Florida West Coast DX Ring will be going to Dry Tortugas Island for the IOTA contest in July 1998. The operators will travel about 70 nautical miles in a 54 ft. vessel with 8 operators and a non-ham Captain. The trip will take around 24 hours to get there. The list of operators/team: AA4XR/Bruce, AI4K/Alice, KC2KU/Marv, KJ9N/Al, KR4GN/Austin, WK9Z/Bud, WT4T/Bruce, XE1L/Luis and Captain Bill. This island is famous for the largest masonry structure in the western

world, now a National Park with Fort Jefferson. One of its famous inmates was Dr. Samuel Mudd, who was the one that healed John Wilkes Booth's leg in his escape through the stage of Ford's Theater after shooting and killing President Abraham Lincoln April 15, 1865. Well known DXer Luis, XE1L, points out another feature about this island is the fact that the famous Pirate-Buccaneer; Jean Laffite might have left a large treasure chest on its beach. Luis states, "If we find it while we erect our antennas; we will dedicate 10% of its value for future Dxpeditions."

SA-037. To celebrate the 1998 Venezuelan Navy Day, the Association of Radioamateurs of Venezuela (ARV) and the Grupo DX Caracas have organized a DXpedition to La Blanquilla Island (IOTA SA-037). The station YW5LB will operate July 16-19th. Operations will be on SSB, CW, VHF, RTTY, Satellite and Packet, with activity on 160-10 meters, 6 and 2 meters. QSL route (mail drop) via W4SO.

NEW ORLEANS DX CONVENTION. The 7th Annual New Orleans International DX Convention will be held on Friday and Saturday, August 14th and 15th, at the Royal Sonesta Hotel on Bourbon Street in the French Quarter of New Orleans, Louisiana, USA. The agenda will included DXpedition presentations, technical presentations, reports on ARRL DX Desk and DX Advisory Committee news by Bill Kennamer, K5FUV, Director of ARRL Membership services, and QSL checking. The activities culminate with a gala dinner banquet on Saturday evening. OPDX InterNet Subscribers will receive an additional bulletin containing the NOIDXC's press release. For updates on the New Orleans International DX Convention, check the Delta DX Association Web site at: http://www.gnofn.org/~w5ru

QSL INFO AND NEWS.....
GS2MP, a rare prefix, was active in CQ WPX CW Contest this past weekend by Cris, G4FAM, one of the members of 5V7A 'Voodoo' Contest Team. Chris's activity took place at the North of Scotland Contest Group's club station GM2MP. QSL via the bureau to GM2MP.

SPECIAL EVENT. The Amateur Radio Scout Club "Spider" (SP5ZDH) will be active June 13-14th from the ruins of the castle of Czersk in central Poland. The callsign will be SP5ZDH/5 or SP5ZDH/P (they are not sure). Operations will be on 80/40/20/15 meters with dipoles for 80 meters and GP antenna for the rest of the bands. For those who are interested, they will be good for one point to the "Polish Castles" diploma. QSL via the bureau to SP5ZDH or direct to: HKL "Pajak", ul. Poniatowskiego 10, 05-400 Otwock, Poland.

SPECIAL EVENT. Look for the Ukrainian special event station EO50FBD, operated by UR7FV, to be activity from June 1-10th. Activities will include RTTY. Working this station will net you BIG POINTS towards the "Old Fortress Award". This award was launched in commemoration of the 2500th year anniversary of Belgorod-Dnestrovsk (TIRA, AKKERMAN, CETATEA ALBA - are former names) an ancient town located near the Black Sea close to Odessa, Ukraine. To earn the award, one must collect a total of 2500 QSO points or SWL reports from the following stations:

1000 points - EO2500FBD memorial special event station
250 points - UR4FXF, UR5FJF, UR5FCA, UX7FC, UR5FJK, UR5FCB
UX7FD, UR5FGO, UR5FCG, UR7FV, UR5FFR and UR5FFO
100 points - QSO or SWL with any station from Odessa and Regions
(UR5F,UT5R,UX5F,UT0,1,2,3,4,7F)
Repeated QSOs (SWLs) on different bands are allowed. The award price is: EU HAMs 6 IRC and for any other continents 7 IRC. The address for the QSL cards and applications is as follows: Slava V. Bratinov, P.O. Box 85, B-Dnestrovsk, 272300, Ukraine

SV8, MYKONOS ISLAND (Greece). Phil, G3SWH, will be returning for the fourth year running to this Greek island (IOTA EU-067) between June 10th and 17th. He will sign SV8/G3SWH and will be active on CW only on all bands (3.5 to 28 MHz). This is a holiday operation and activity will be limited to a couple of hours in the mornings and a couple of hours in the late afternoons. QSLs will be available either direct or via the RSGB bureau.
US4, UKRAINE. Igor, US1I, reports his good friend Ed, US4IXQ, he is very active on 80 meters CW and SSB (no specific times were given). He also asked OPDX to publish Ed's address: Ed Repienko, P.O. Box 418, Makeevka-41, Donetsk Region, Ukraine, 339041. Ed has reportedly worked a big quantity of USA-stations on 80 meters this past winter and spring.

USI ALERTS. Dennis, N9WDQ, provided OPDX with the following upcoming "United States Islands Award" (USI) operations:

From now until June 6th, Bill, K8CJQ, will be working from S. Manitou Island (MI038). Bill says that there have been other operators from here but none for USI. He will be able to be active on 40/20/15/10 meters. Starting time will be 1900z. He also says that the operation will be on both SSB and CW.

From now until June 5th, Dean, K3GGN, is celebrating the end of the school year by going out and working some new islands. Look for him from Washington Island (WI001L) and Rock Island (WI014T) at and about 1400z on 20 meters. Stay tuned for more updates from Dean as he progresses.

On June 13th or possibly the 20th, Corey, N1WON, will be operating from Howell Key, FL about 1400z. This is a new USI, also IOTA NA-062. Corey will be with Dean/W4WHN and Richard/KE4GWH. The WX will be the deciding factor as to which day they go out to the island.

From June 30th to July 5th, look for Ted, W8TTS, who has just recently upgraded to General - CONGRATS - to be on South Bass Island, OH (OH007). He plans to be able to be active on 40/20/15/10 meters. His activity will vary due to family doings. Also, Ted says that he will try and get some of the other islands on in the area.

LAST but NOT LEAST..... On June 15th, Dennis, N9WDQ, plans on being in Kansas to activate the first KS island. More info to follow.

V63, CHUUK ISLAND (Micronesia). Alan, VK4AAR, reports that his good friend Peter, V63PD, will be getting his station setup again and currently waiting for an antenna to arrive on the island. Alan believes Chuuk Island is IOTA OC-011. We are sure that Alan will keep OPDX informed about Peter's

process, meanwhile, he has announced that he will be his QSL Manager. So for V63PD QSL via VK4AAR direct only to the call book address: Alan Roocroft, VK4AAR, c/o Post Office, Dalveen QLD 4374, Australia.

VR2, HONG KONG. The 59(9) DXReport states that Serge, F6BNK, will be signing VR2/F6BHK for the next 2 years while on a work assignment.

XU, KAMPUCHEA. The "DX News Sheet" reports that Ichinose, JA6BND, is active until the middle of June as XU6BND. He can usually be found around 0000z and 1200z on 15 meters SSB. QSL via home call.

ZM1, NEW ZEALAND. The recent formation of the Auckland Contest Club by founding members Jacky/ZL3CW, Ron/ZL1AMO and Mark/ZL1BMW has resulted in the issue of the special callsign ZM1A for the duration of one month beginning with the CQWW WPX CW Contest last weekend. Listen for ZM1A after the contest with an emphasis on 40 meters.

HAM RADIO OPERATORS LOSE A LONG TIME FRIEND. Sen. Barry Goldwater, K7UGA, became a Silent-Key (SK) on May 29th, at the age of 89. He was former US Senator, onetime presidential candidate, and a noted radio amateur. Barry Goldwater had suffered a stroke in 1986 and had been in failing health ever since. The former Senator did a lot for the amateurs in the U.S. and other countries. He will be dearly missed. Our deepest sympathy goes out to the family. OPDX InterNet Subscribers will receive an additional bulletin containing ARRL Bulletin ARLB039, which has more details about Sen. Barry Goldwater's life.

Isn't it possible that someone might have the motive of keeping on the topic this newsgroup is dedicated to? What would the reaction on the "certain other newsgroups" if people started posting and cross-posting messages about stray capacitances from a 1/2 wavelength dipole to ground?

And no, race-baiting and divisive, coded hate speech intended to incite paranoia and violence is not politically correct.

> can test my program.
>

Thanks for the discussion all, but I still need some samples.

To answer your questions:
- No, I don't have a receiver that I can pick up any morse code on.
- I'm not very interested in amateur radio, I'm implementing the
decoder as a project in real time systems development for a university
paper. It is actually a repeater, to decode morse code and re encode
it, to provide a clean morse signal from a distorted input. Whether
this is practical or useful I don't know, it just sounded interesting
:-)

If anyone can help, please e-mail me.

Cheers,
Hamish

But not amateur radio per se, since the Poulsen arc couldn't be made to work reliably, if at all, on wavelengths as short as those at which amateur operation were allowed.

Now, for extra credit:

1. Applied to radio transmitting technique, the terms "arc" and "spark" are synonymous--true or false?

2. The Poulsen arc emitted a form of a) continuous-wave or b) damped-wave signal--which?

3. The arc transmitter schematicized in the graphic that accompanied the original post uses a form of ____-____ keying. (Fill in the blanks.)

The following is my amateur radio station that I am selling out completely. The items are
listed alphabetical by manufacture. All items are located in Beatty, Oregon (25 miles north
of the California border - on Hwy 140).

Astron RS-20A 20 amp. power supply $75
CDE Ham IV rotator (brake is broken) $50
CSI Private Patch V Multi-Mode connect $250
Comet VHF-UHF Antenna, Triplexer, Mount $175
Comet CX-224M 144, 220, 440 mhz. antenna
Comet CFX-324 triplexer 144, 220, 440 mhz.
Comet CQ-5M trunklip mount
Glostronics 12-1060A-220 220 mhz. amp. 10W in-60W out $75
HyGain TH6DXX triband (20-15-10) antenna $150
Icom IC-30A 440 mhz. crystal controlled FM transceiver $100
Icom IC-37A 220 mhz. FM mobile transceiver $150
KLM 144.148.13LB 2 meter 13 element beam $60
KLM 219.226.14 220 mhz. 14 element beam $60
KLM 420.450.27 440 mhz. 27 element beam $75
Kenwood SW-2000 SWR/PWR meter $75
Midland 13-513 220 mhz. FM mobile transceiver $150
Radio Shack 21-527 digital SWR/PWR meter $50
Santec ST-220/up 220 mhz. handi/talkie $125
Swan SS-200 w/power supply 10-80 HF transceiver $250
Tristao 72 foot crankup, guyed tower $150
Yaesu FT-900 CAT w/separation kit HF transceiver $1000
MISCELLANOUS:
Approx. 140 feet Radio Shack RG-8 coax (new) $50
3 - 85 feet (approx.) lengths of Belden 9913 (3 yrs. old) $30 ea.
Other assorted coax, wire, etc.....ask, I might have it.
These items are in excellent working order. All items are plus shipping.

Thanks for reading.....Bob.....W5YHY

> E-mail-- Deforger@aol.com
> Thanks in advance
> Robert

Robert....I will have my Cub page back up soon....What I can tell you is
most likly the same stuff you know.
The Cub of course is cheaper and does not have several of the function
the Scout has.
No memory storage
No viberate

The Cub has more coverage.

The Scout is one hell of a freq counter but if you don't have the money
or don't plan on using the reaction tuning its a waste of money....this
counter was made to be used for that reason. If you plan on buying one
of the expensive scanners to go with it, then definatly get the
Scout.....if not then don't waste your money....the Cub is great for the
lower buget, not so rich scanner nut!

The Cub is very sensitive and can grab freq's from distances you won't
believe....if you live near a ridge where paging towers are and FM radio
transmitters you will be pissed! They are very strong signals and will
give readings when you don't want them to.

For the Price of the Scount you can have *Two* Cubs and a bunch of
eccessories!

Remember------Just My Opinion!
Oh yea.....stay away from Startek and Radio Shacks counters. I have had
them all and the Opto's are the best!

I wonder has the original complainant:

a) calculated the G forces to which the broken rig was subjected when it fell, and

b) does this figure exceed that specified by MIL STD-810 (or whatever)

If it does, then I guess there's no cause for complaint.

73 Richard VK2SKY, who likes the FT-50 except that it doesn't reject the local kilowatt pagers on 148.125 MHz, but hey, you can't have everything :-)

3773. AutoFAQ Sent to Over 10,000 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-02 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <FbSc1.2839$aJ.1371722@newscene.newscene.com>
Source record: 170964

In September of 1996, I started mailing an introductory message to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 21 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

About half of one percent of all recipients strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; also, there's obviously just no pleasing some people, including the one person who angrily replied that he did not ask to be welcomed to this newsgroup (sigh!); however, experiences in other newsgroups demonstrate such automated welcome messages to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half of one percent thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the message attempts to get to the point as quickly as possible, and some careful pruning and rewording of the message has helped reduce complaints, but pragmatically the message is also optimized to minimize the amount of followup correspondence I have to engage in)

A handful of people complained that they did not post to the newsgroup (they did, usually by following up to a crossposted article in another newsgroup). In this case, the message was at least useful to warn users about such unintended crossposting.

A handful of people didn't read the entire message, or didn't understand it, and asked to be taken off the mailing list (of course, this isn't a mailing list, and removing their address from my database would have the opposite of the desired effect). One person even asked to be removed from the database anyway, stating that he never intended to post to the newsgroup again (I honored his unusual request).

About one percent complimented me for sending it (which I appreciate).

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged From: or Reply-To: addresses to ward off "spam"; I've also recently begun to notice a number of readers registering with blocking or filtering services provided by DejaNews and others that prevent them from receiving reply E-mail)
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 10,000 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly reduced, and will get even smaller with time.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the message to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the message, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc
X-Loop: pschleck@oasis.novia.net

Hello,

This E-mail message is automatically sent to every new poster or cross-poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). It should be sent once, and only once, to each unique E-mail address. As the subject says, this is a welcome message. The Internet amateur radio community welcomes you to the newsgroups, including rec.radio.amateur.misc, and welcomes your input, opinions, and constructive participation. To help make you feel welcome, experienced participants like myself have chosen to systematically inform you, as a new poster, about useful information resources and user tips to help you get the most out of these newsgroups. I hope that you will consider this message in that spirit.

Please note that this is a one-time mailing, not a mailing list, and the presence of your E-mail address in my database prevents you from getting the message again the next time you post. Because of this, a request to "take me off of your mailing list" would not only not make sense, removing your address from my database would actually have the opposite of the desired effect (where you would be considered a first-time poster the next time you posted, and get the message again).

* * *

1. The news.announce.newusers newsgroup, moderated by Mark Moraes, contains a number of very informative articles providing an overview of net-etiquette, suggested writing styles for electronic forums, and other various do's and don'ts concerning Internet culture. If the articles have expired at your site, you may also view them via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

2. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed as a WWW Page:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

3. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

4. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

5. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which, with the sole exception of rec.radio.amateur.boatanchors for vintage equipment, is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

6. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

7. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

8. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question. Note that it is (almost without exception) inappropriate to post your article to all (or even a significant subset of) rec.radio.amateur.* newsgroups. Please pick only the most relevant newsgroups (usually no more than 2 or 3), and post your article as a simultaneous cross-post (check your newsreader documentation) so that only one article is propagated, and the article is only shown once in a newsreader.

9. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

(Text of article adopted from Tom Boutell, World Wide Web FAQ Maintainer, with modifications.)

DAVE -
Galaxy 4 was used to distribute the signals, not to synchronize the transmitters. Most digital paging systems use high-stability crystal oscillators to maintain the transmit frequency stability within a few Hz. That's good enough for digital, since the carrier is being shifted +- 4 kHz at a rate of 2400 baud or faster.

It's to be expected that financial newspaper columnists won't get the technical details right.

Hi James - The Spring semester ended May 15th. I'm on a 6-week vacation visiting my mother here at Lake Tahoe, using her account (the paychecks still roll in, though, James!). I'll be back in Hawaii next week; I'll be teaching a summer class (at a rate equivalent to $90/hour, James), as a Lecturer - haven't been a Grad Assistant since the early 90s.

Do you know the difference between a Lecturer and a Grad Assistant, James? Probably not since you never finished high school (oh, sorry - I forgot you pleaded with me not to reveal that!).

My mother again asks you to stop harrassing her by email. She's 71 - you really shouldn't be picking on her. If you have something to say to me, send it to my hawaii.edu account, not her account.

I've had great success with NuMorse - went to take my 5 WPM test and passed the 13 WPM! NuMorse is a very flexible, Windows program (it uses the sound card not the PC speaker). You can set the frequency of each individual character (letter/number/prosign) for random practice, NuMorse will create random QSO's (just like on the element 1A/1B exams AND questions to go along with QSO's) and generate code from text files. NuMorse has all the others beat for a flexible, comprensible, inexpense way to learn CW. NuMorse is shareware so you can try it first, to try it go to

http://www.btinternet.com/~tony.lacy/

Of course, NuMorse ties you to the computer. The MFJ-418 Morse Code Tutor is also very useful and portable. I have an older MFJ-411 (no LCD display) that I listen to while driving. I've seen the MFJ-418 advertised for less than $79.00.

I have no association to either NuMorse or MFJ and these comments are my own, based on my recent experience.

You are right, and you are wrong. True, I disagree with Kevin, I told him so, and he acknowledged our disagreement. That was enough on that subject, I think. Since Kevin chose not to continue either, I tink we agreed to disagree and left it at that. "Stricken"? how do you "strike" a thought from a newsgroup? once it is posted, it is posted. I think we might all avoid starting threads that are off-topic, though. occasional humor, etc might have it's place. Controversial stuff like that is best left where those who want to read it know to look for it.

Politically correct? boy, that's stretching the definition there, Drew. I am proud to be on record as against all discrimination, including Affirmative Action. That's not PC. I am an advocate of the right to keep and bear arms without infringement for all law-abiding, responsible adults who care to do so. Tht's not PC. While I support a woman's right to choose a career outside the home, I believe that what has lately been derided as the "Mommy track" is the highest, noblest calling a woman can aspire to. That's not PC. I'm not PC, and my views are my own, and any resemblence, superficiaal or fundamental, to politically correctness is entirely coincidental.
>

I wasn't aware that it involved YOU. I think Casey posted a flame directed at Kevin, who chose to ignore it. You, however, jumped in. Not saying that was necessarily bad, but if you can make it your business, I can too. Is that politically correct enough for you?

I think you are just upset at me for plaigarizing your "you lose again" line. Pardon me for tweaking your tail once more, but:

You lose again, Drew.

My prog is almost what you are looking for, and is freeware. There are three features you did not mention... direct menu driven calbook access, automatic export of info to a QSL form suitable for printing on the back of a photo or card stock, and ability to sort records and do a quick dupe check. There is no contest support, no beam heading stuff, etc. Try it out. It's free. Ignore any registration begs you see... I don't have the source code and so I don't want to try to make any changes. If you don't like it, delete it and keep looking. Url in my sig. Enjoy.

Actually isn't free fall 0 g? Standing on Earth is 1g, hitting a concrete surface would produce G forces above 1g depending on the velocity you were travelling when you suddenly stopped.

Hi,
Why does the Yupi have a telescopic antenna? Do all wide band hand helds need this? Could you use a ducky type for non- shortwave stuff?

Thanks

Bob

(snip snip snip snip)

Give it a break, Kevin. This is not the appropriate group for this. You surely know by now that a majority here find your views ludicrous or even offensive. It would appear that your racist posts on a ng that has nothing to do with race are an attempt at trolling only slightly more clever than that of Burt, Inc. Let's discuss some miscellaneous recreational topic having to do with amateur radio for a change. If you need a more general forum for airing your views on race, there's always the Jerry Springer show. I think you can even get paid, or at least your expenses paid. If you have a sheet and a pointy hat, they'll even let you wear them, on national TV.

try REALAUDIO. the player alone is usually availabl at radio station sites. With the player, you can tune into a broadcast station over the net in real time, or very nearly real time. There is a buffer of a few seconds, I believe. The main program allows you to upload in real time as well as play it. The player alone is freeware, I think, but the full program is probably expensive. Anyway, I bet two "stations" could have a QSO via the internet with this program, though I don't think you would have QSK, and TR switching, such as it is, might take a few seconds.

This internet phone stuff might be a good approach. Two stations with voice capable modems, each with an audio oscillator and a key, could send not only QSK, but full duplex, I think.

Supermorse supports modem-to-modem QSOs, BTW.

One novel idea whose time has surely come is CW over the AIR. I bet it could be done, with simple homebrew equipment too.Perhaps that should be looked into.

The MIDXA web pages at:

http://www.guam.net/pub/midxa

are now also mirrored at:

http://www.qsl.net/midxa

Site contains pictures of shacks and antennas in the
Mariana Islands, QSL info, a QSL gallery, visiting
DX'ers pages, club information and history, digital
voice keyer software, photo tour of KH7R's QTH,
island pictures, and a bunch more.

Lots of pictures.......

Hams who were in the military during WWII in the
Mariana Islands may be interested in viewing the
pictures of Tinian island on the Club Photos page.

I guess I am so un-PC that I am not sure of what is 'the Mommy Track', but
I think it means a Mother who stays home to take care of the Kids and the house.

I have some thoughts about that as opposed to one who drops the kids off at
Day Care and goes to work. If all the MARRIED women who work and have
small kids would put a pencil to what they actually take home and consider the
other side (staying home) There might be a mass movement to stay home.

Consider what must be subtracted from your take home pay.

1. Day Care
2. Gasoline and maintenance of the car.
3. Clothes.
4. Outside meals.

Other downside results of working.

1. Who do your kids look up to .. You or someone at the Day Care.
2. Do you think your Husband would rather come home to a bag of
burgers or a home cooked meal. He might get the idea that he could
pick up a bag of burgers himself, what does he need you for ..!
3. What if there is a child molester working at Day Care, it is not that
uncommon you know.
4. You, by being in the work force, are in effect competing with your

Husband for a job.

Upside of staying home

1. What if all the MARRIED Mothers with young
kids quit working. Whoever your Husband works for would look
around and see that so and so needs workers. He might even give
your Husband a raise to keep him happy. If not your Husband might
be able to find a better paying job, rather than worry about being
a victim of down sizing..!!
2. You have better control of how your kids grow up, what their values are.
3. Your Husband would like you more, you have heard the saying "The way
to a Man's heart is through his stomach". A good home cooked meal beats
Mac Bag of Burgers any day.
4. You would not run the risk of meeting someone at work that ended up in
an affair and a busted marriage.
5. Your Husband would have more self esteem. He would be the one bringing
home the bacon. That in turn would most likely result in him treating you
and the kids better.

So what is your job really worth .. better yet does your job actually cost you ?

Curtis snipped an has input:

There is a web page out there that is Authored by thelibnet. On it he/it is
asking for participants in the SO CALLED Liberty Net to send personal
data and a picture for posting on the page. Funny thing there is nothing
about his data, much less a picture, he hides behind the screen name while
asking others for personal data and a picture.

Here is the URL: http://www.angelfire.com/ky/libertynet/LEGIT.html

The SO CALLED Liberty Net Nits will come on frequency when it is
being used and then start referring to the group using the frequency as
Jammers. This same wimp asks for pictures of the SO CALLED Jammers.
I guess he is of the simple minded belief that by posting a picture of one
of us (I am deemed to be one of the Jammers) that it will cause us great
harm, or maybe embarrassment. To show the geek just how worried I am
about having my picture posted I emailed him with a link to my site and
told him how to get to my picture. From the simplicity of his site I figured
he did not know how to down load a pic so I told him how in the Email.
So now my picture, and some lies, which I might check with an attorney
to see if their is any libel there, are posted. What do you know, no one has
came knocking on my door and I am not ashamed to look into the mirror.Now if I were
asking for data and pictures of someone, friend or foe, anddid not have the spine
to identify myself then I might not be able to look
in the mirror. What a spineless wimp thelibnet is.

In these modern times we do so often hear of the New World Order. If Congress assembled was not so clearly inept at dealing with the rogue in the White House, would they not be intrigued during their present FCC investigation to learn that Europeans and New Zealanders sit on the board of NCI and are therby attempting to sway U.S. telecommunications policy ?

It was George Washington, citizen-soldier-statesman who, in his farewell address, declared that the U.S. must "avoid entangling alliances". Apparently Americans of today consider themselves wiser than the fathers of this republic.

does it have a CAL mode ? my pk232 has a calibrate mode.
I can hang a carrier and listen/look at it with a O'scope connected to
the output. is the xmitok on? just a stab in the dark.

This is a message from Stumpjumper #31, DrewDurigan mnmaniac@aol.com, dated 12/12/97. In it he states that the Great White Father is a drunk, makes reference to Al's dead wife and finds Al to be, in his words, "obnoxious". I wonder how the Stumpjumpers feel about #31 now? This message can be found on Deja News. I have sent Al a copy of this message.

I received this message after I asked K4OKA, Big Al, about TheLibNet being a Stumpjumper, after TheLibNet said he had been inducted into the group. As you will read, Al refers to him as DREW! Not TheLibNet, but good old DREW. Sorry Drew, you lose. By the way Spew, Al asks me not to be a stranger. Not the attitude of someone who ran me off the net would you say? I hear Drew writing Al at this time saying it wasn't him but an imposter. Tell some more lies Spew.

I recently bought a IC229H, but no manual or docs with it. Could anybody
please provide me with:

a) Specs for IC229H
b) Some idea about programming this unit.
c) The pin-out for the Mike connector, and/or some info re packet set-up.

Thanks

I am selling a Kenwood TM-261A. It is excellent
condition!
I've only had for 6 mos. It was mounded in my car for 3 weeks before I
had to take it out (the car died). It's been in the box all other
times. The mic is a non backlit microphone. I have all other equipment

that came with the radio. It's a 9 if not a 10. I am asking $250 for
it. PLEASE E-mail me if you are interested or have questions (I think I

covered everything though), as I do not usually check the NG for
responses. Thanks!

73
Jon

It has come to my attention that the NEW TM-261A is selling for $230.
So, I guess
I was a little out of range. I was expecting this, though. Anyway, I
suppose I can go for $200. The radio is really in great shape. Again
PLEASE E-mail me for questions or comments. Thanks!

73
Jon

Dear Burt,

I will continue to express my concern that you have not yet sought help for your condition. These periods of hallucination you experience will not go away on their own and you must seek guidance before it is too late.

Please ask someone to drive you to the nearest facility and check yourself in, if not for your own benefit, at least for the sake of your long suffering family. They deserve you at your best and need you for the long term.

There are many programs that will help for little or no payment, so it shouldn't be a financial burden. Even at that, perhaps your fellow hams would be generous and help you out.

I know you mean well, but your continued posting of the same messages over and over mean that you have lost your ability to say meaningful things and you need "Expert" help, not the advice you are receiving from your ham friends, well meaning though they are.

I wish you continued success in your career as a small town community college instructor and only hope that your condition does not adversely effect your position there.

Wishing you the best.

FREE Priority Mail Shipping!
Shipping Date starts June 26
Shipping Priority is listed as checks/money orders are
received

Windows 98 Upgrade
- Do more with your current PC
- Features integrated Internet support
- Supports MMX, DVD, USB, AGP and more
- New tools keep your system running smoothly

Description
Windows 98 builds on the groundbreaking features
of Windows 95 while maintaining the best support
for older applications and technologies. Enhanced
functionality provides the best Internet experience,
with easier access and seamless Internet integration
and a Web-like view of all resources and content.
Windows 98 has everything you need for Internet
communication - e-mail, news reading, and video
conferencing. Internet addresses throughout the
product, along with Windows Update, give easy
access to technical support information and system
updates.

Windows 98 delivers a higher quality computing experience, better system performance and easier maintenance. Specific performance enhancements include: faster application loading; more hard disk space; faster shutdown; and multi-monitor support. Windows 98 is the first step on the way to a self-maintaining operating system. You can keep your computer running optimally with minimal effort.

Windows 98 makes computing more interactive and engaging with added entertainment features, and built-in support for technologies like MMX, Digital Video Disc (DVD), and DirectX 5.0. You can receive broadcast signals to your PC, with new features like TV Viewer and Program Guide.

Windows 98 provides built-in support for peripheral devices; it's easier to add/use devices that are becoming common in today's computing environments. Universal Serial Bus (USB), the new port standard, is one of the computer hardware advances supported by Windows 98. It supports common peripheral devices, as well as the newer generation of peripheral devices such as joysticks, game pads, digital cameras, scanners, soundcards, TV tuner adapter cards, and more.

Windows 98 lets you work better and play better! Ten Top Reasons to Buy are: smart set up, easy updates; better crash protection; free disk space; faster performance; hassle-free startup; more portable power; more desktop space; phone savings; web TV on your own PC; Plug and Play that works.

Common (Q)uestions and (A)nswers:
Q: Do I qualify for an upgrade version?
A: - If you currently use Windows 3.1 or Windows 95. Yes.

Q: Is this the full authorized version?
A: - Yes!

Q: What exactly am I getting?
A: - Windows 98! shipped to you directly after Microsoft releases it! See product details above for all the improvements you will have with Windows 98.

Q: I'm not very experienced, will I be able to install it myself?

A: - Yes, installation ease is guaranteed! Or
your money back.

Q: Why should I pay ahead of time?
A: - To guarantee you'll be one of the first
people who receive windows 98. And to
ensure you pay the best possible price!

Q: Is my check going to be cashed before June 26?
A: - Yes, to help raise revenue, we have
purchased Windows 98 in mass quantity.
Which allows you to save shipping charges!
The date/time we receive your check puts
you in a prioritized list. We start
shipping on June 26.

Q: How is it going to be shipped?
A: - US Priority Mail.

Legal Notice: Product or company names
mentioned herein are for identification
purposes only and may be trademarks or
registered trademarks of their respective
owners.

*Free shipping to the 48 continental states.
via, US Priority Mail.

*All orders outside of the 48 continental states
add 10.00 shipping. (Hawaii, Alaska, etc)

Ordering Instructions:
Send a check or money order for $89.00 to:
FREE US Priority Mail Shipping!

HQ Software
Attn: Windows 98 Upgrade
P.O. Box 324
Plainwell, MI 49080

NOTE: Be Sure to Include your email address

Kevin was not "race baiting", as you suggest. He was simply offering his opinion on why a mixed-race society will never function properly and why separation of the races would be beneficial for all involved. And yes, it very much IS a leftist attitude to holler "free speech" whenever the message is pro-gay rights, pro-Negro, pro-Hispanic, pro-gun control, pro-children, etc. But censorship is immediately called for if the "speech" does not fit these politically-correct guidelines.

3832. NCI files Reply Comments in RM-9259

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-03 00:00:00 UTC
From: "Carl R. Stevenson" <wa6vse@fast.net>
Message-ID: <01bd8e85$968476a0$0100005a@wa6vse>
Source record: 170822
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

NCI, which had earlier filed a Statement of Opposition to the ARRL's Request for Declaratory Ruling, has filed Reply Comments in response to the Comments filed in the matter by the ARRL. (The matter has been designated RM-9259 by the FCC.)

NCI's original Statement of Opposition and its Reply Comments are available for viewing by anyone who is interested at:

http://www.nocode.org

The ARRL had asked the FCC to issue an Declaratory Ruling, stating that "operating in non-conformance with established voluntary band plans" is "not good amateur practice."

FCC Rules already state:

97.101 General standards

a.In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice.

Thus, the requested ruling would have, in a rather indirect manner, had the effect of making operation outside of what is provided for in "voluntary band plans" a violation of FCC Rules. NCI opposed this as being unnecessary and having the undesirable effect of virtually codifying the status quo in a way that would promote stagnation and reduce the amateur's ability and incentive to experiment with and introduce new technologies.

The ARRL originally sought a "Declaratory Ruling," which would have bypassed most, if not all, of the public notice and comment on the matter, which is required for the more usual "Petition for Rulemaking." However, the FCC chose to treat the ARRL's request as a Petiton for Rulemaking in order to permit public notice and comment.

The ARRL, in its Comments, strongly criticised the FCC for its "misshandling of the matter" and lashed out at the overwhelming body of comments against its Request.

At the Dayton Hamvention, shortly before the close of the comment period, FCC staffer William Cross, W3TN, stated, "We've received many comments on this petition. None of them support it."

No Code International's website has been updated today
with copies of NCI's recent filings with the FCC in
a couple of matters pending before the Commission.

The first item is RM-9259 (which started with the ARRL's
Request for Declaratory Ruling regarding "voluntary band plans").

The second is RM-9267, the Land Mobile Communications
Council's (LMCC) Petition for Rulemaking where asking
that the 420-430 MHz and 440-450 MHz segments of the 70 cm
band be reallocated to the Private Mobile Radio Services.

There is also a "button" on the main page which will
take you to a listing of the names, mailing addresses,
and e-mail addresses of the members of NCI's Board of
Directors.

Please feel free to e-mail or write to the Board
if you have questions or comments relative to NCI's
activities.

NCI's web site is at: http://www.nocode.org

I recently built a 9-band shortwave receiver (model #1253) from Ten Tec Inc. It costs $59, and I was able to put it together in two (long) nights -- this was the first kit I've ever built. This radio receives many amateur bands as well as a few popular shortwave broadcast bands. It is also capable of tuning SSB, which is a neccessary feature if you're planning on listening to a lot of amateur voice communication. The radio isn't the greatest performer, but it was fun to build and gets quite a few stations. Here is Ten Tec's homepage: www.tentec.com. You can call them at (800) 833-7373. They also sell a cheaper shortwave radio kit for $24, and a more expensive one with digital tuning for $195 (model #1254). The 1254 was reviewed by someone on this newsgroup a couple months back. You could probably find the review by searching for "Ten Tec" and "1254" on www.dejanews.com.

Another kit supplier is MFJ. Their homepage is at www.mfjenterprises.com. They have one SW receiver kit for $59, but just by comparing features I beleive the Ten Tec is a better buy.

A book you may want to check out is "Radio Receiver Projects You Can Build" by Homer L. Davidson. It has 33 projects that start out very simple and go to medium complexity. It includes AM and SW radios. Note that you must build everything from the scratch, including winding your own coils! I found this book at Borders.

Good luck with whatever you do,
dAVE.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

Send me email...

Jason, N9LEA

I have a good working Astron RS-20 power supply that I am not using anymore that I would like to trade for a basic memory keyer AND iambic paddle. A keyer with just 100 character memory would do me fine. Will also sell the RS-20 for cash price of $65 plus UPS shipping from 48449 in Michigan. Please email me if any interest.

Heh heh, I can always tell when the convicted drug felon is back on the newsgroup. I'm sure there was a point to this remark although like most everything else you post it makes little to no sense. Didn't know the Spaniards were known for having greasy and fat bloated faces. I see you've spent as much time educating yourself as TheLibNet has. As far as fat bloated faces are concerned clearly you and your wife must be used to it by now. Do you roll her in flour when your ready to get it on or are you usually both too drunk to do anything? By the way Jimmy, if you want to see what a real woman looks like go visit my web page, my guess is my wife weighs in about half as much as yours. About 250 lbs is it? ho ho

Now go talk to your buddys on 75m and increase your knowlege of the world.

Tim, ka8ddz

This is a faulty tar and nicotine filled mess with an inoperable VOX circuit. It has been on CB for the last 15 years,Orifice bought it for $200. He talked all about on the radio when he bought it. He needs legal money to try to get his daughters back from DEFACS.

No, it makes me a poor speller, you a spineless anon (some things never change), and Burt an ex-volunteer examiner
whose best response to my post was to correct a misspelled word. What a rebuttal! but then again, I didn't expect anything better.

Tim, ka8ddz

"Baiting," race- or otherwise, was certainly not what I did.

I saw a personal attack, childish and barely literate, which contained an implicit assumption that is totally erroneous: the assumption that it is somehow "immoral" to recognize the reality of the inequality of the human races.

I see no validity whatsoever in any moral system which condemns free inquiry, rational thought, or recognition of ascertained facts. And I am going to question such pernicious nonsense wherever it appears.

There was once a religio-legal system in place in the West which imprisoned or killed persons who questioned the existence of transubstantiation or demons (and many other fantastic lies too numerous to list). I have publicly condemned that system, and continue to do so, and obviously do not want it to return.

But we are returning to it, in a way.

We of the West are now veering toward the establishment of the doctrine of "equality," racial and other varieties as well, as a kind of secular religion. The "hate crime" laws which are now being imposed by the elites' hired legislators (with the acquiescence of the boobs) are part and parcel of the new faith: Like most priesthoods, the prime movers of the "equality" hoax have a yen to punish, imprison, or kill those who question their profitable racket. In some countries, like Canada and Germany, they already have that power.

A precursor to the legal persecution of those perceptive enough to realize that neither individuals nor races are or should be "equal" is the promotion (only begun in the last few decades, by the way) of the idea that such "evil" thoughts constitute "racism" and that "racism" is an awful awful bad thing -- mustn't do or Daddy spank. Slowly the idea is being added that not only is "racism" veddy veddy bad, but it also

somehow illegal.

Preposterous? Well, demons, witches, and transubstantiation are preposterous, too, but hundreds of thousands have been killed by "well-meaning" folks fired up for blood by an utterly false and insane belief system. I don't want it to happen again.

So, I must speak out.

There is no evidence whatsoever that the human races are equal in intelligence or in many other characteristics, and in fact it would be a bizarre anomaly of Nature if they were.

There should be no moral opprobrium attached to the stating of this obvious fact.

Honor bright,

Kevin, WB4AIO.

I have the following books for sale. All are text books used for Electronic Fundamentals (DC Theory, AC Theory, and electronic devices) at the Technician (Associate Degree) level.

All books are either new, or "almost new."

Electronic Devices and Circuits by Hassul
with student solution manual, still in shrink wrap $ 40

Electronic Principles by Malvino - 6th edition - 1999 (that is what it says in the book) $40

Basic Electronics by Grob - 8th edition - 1997 $ 40

Electric Circuit Fundamentals (3rd Edition) and Electronics Fundamentals (3rd edition) all in one book - 1995 $ 40

Electronic Devices and Circuit Theory by Boylestad
6th edition - 1996 $ 40

Electronic Devices and Circuit Theory by Boylestad
5th edition - 1992 $ 20

Linear Circuit Analysis by Davis - includes CD ROM
1998 $ 25

Digital Electronics by Uffenbeck - 1994 $ 20

Electricity - Principles and Applications by Fowler
2nd edition - 1994 $ 18

Circuits by Carlson - Preliminary edition, in paperback
1996 $ 15

Prices do not include shipping from NE Ohio.

Thanks.

Very true. I'm not sure about the state of the art, but a few years
ago they could only decode almost perfect morse, and it was easy to make
them print gibberish by setting the keyer aside and using the straight
key with some exaggerated "style".

3881. 1st Straw Poll: rec.radio.amateur.* reorg

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-04 00:00:00 UTC
From: Jeremy Billones <voting@clark.net>
Message-ID: <6l6jbt$8pn$1@clarknet.clark.net>
Source record: 170669
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

(Repost. Crossposted to fewer groups, multiple times.)

FIRST CALL FOR VOTES (of 2)

Votes must be received by 23:59:59 UTC, 22 Jun 1998.

This vote is being conducted by a neutral third party. Questions
about the straw poll should be directed to the rec.radio.amateur.*
Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones

(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the

readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*
reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote
to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A
future RFD/CFV would have to be initiated to do this. You are, of
course, welcome to express your opinions concerning new newsgroups by
posting them to rec.radio.amateur.misc (*NOT* by E-mail to the
vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on
rec.radio.amateur.misc about this opinion poll to develop your own
opinions (go to http://www.dejanews.com/ and search for "STRAW POLL").
If, after reading the public discussion, you still remain undecided, you
may abstain from this opinion poll. You may do so informally by not
participating in it at all, or formally by explicitly voting "ABSTAIN"
for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account
per voter. Votes must be mailed directly from the voter to the votetaker.
Anonymous, forwarded or proxy votes are not valid. Votes mailed by
WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may
mean that your vote does not get counted. If you do not receive an
acknowledgment of your vote within three days contact the votetaker
about the problem. It's your responsibility to make sure your vote
is registered correctly. Duplicate votes are resolved in favor of
the most recent valid vote. Addresses and votes of all voters will
be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after
the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about
the spacing of the columns or any quote characters (">") that your
reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and
indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

```
[ YES ] example.yes.vote
[ NO ] example.no.vote
[ ABSTAIN ] example.abstention
[ CANCEL ] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======
.-------------------------------------------------------------------
| 1ST STRAW POLL: rec.radio.amateur.* reorg
| Official Usenet Voting Ballot <RRSP-0001> (Do not remove this line!)
|-------------------------------------------------------------------
| Please provide your real name, or your vote may be rejected. Place
| ONLY your name (ie. do NOT include your e-mail address or any other
| information; ONLY your name) after the colon on the following line:

Voter name:

| Insert YES, NO, ABSTAIN, or CANCEL inside the brackets for each
| newsgroup listed below (do not delete the newsgroup name):

Your Vote Newsgroup
--------- ------------------------------------------------------------
[ ] rec.radio.amateur.antenna
[ ] rec.radio.amateur.boatanchors
[ ] rec.radio.amateur.digital.misc
[ ] rec.radio.amateur.dx
[ ] rec.radio.amateur.equipment
[ ] rec.radio.amateur.homebrew
[ ] rec.radio.amateur.misc
[ ] rec.radio.amateur.policy
[ ] rec.radio.amateur.space
[ ] rec.radio.info
[ ] rec.radio.swap

======== END OF BALLOT: Delete everything after this line ==============
```

3882. Re: How important is TX power ?

Geez, a whole bunch of coherent, on-topic, thoughtful and
polite answers. Just shows that there are still a lot of real
hams out there. Can't add anything to what has already been
suggested.
